ECIE 2022 17th European Conference on Innovation and Entrepreneurship Pantelis Sklias,Nikolaos Apostolopoulos,2022-09-15 Covering Codes G. Cohen,I. Honkala,S. Litsyn,A. Lobstein,1997-04-14 The problems of constructing covering codes and of estimating their parameters are the main concern of this book It provides a unified account of the most recent theory of covering codes and shows how a number of mathematical and engineering issues are related to covering problems Scientists involved in discrete mathematics combinatorics computer science information theory geometry algebra or number theory will find the book of particular significance It is designed both as an introductory textbook for the beginner and as a reference book for the expert mathematician and engineer A number of unsolved problems suitable for research projects are also discussed Perfect Codes And Related Structures Tuvi Etzion,2022-03-14 In this monograph we develop the theory of one of the most fascinating topics in coding theory namely perfect codes and related structures Perfect codes are considered to be the most beautiful structure in coding theory at least from the mathematical side These codes are the largest ones with their given parameters The book develops the theory of these codes in various metrics Hamming Johnson Lee Grassmann as well as in other spaces and metrics It also covers other related structures such as diameter perfect codes quasi perfect codes mixed codes tilings combinatorial designs and more The goal is to give the aspects of all these codes to derive bounds on their sizes and present various constructions for these codes The intention is to offer a different perspective for the area of perfect codes For example in many chapters there is a section devoted to diameter perfect codes In these codes anticodes are used instead of balls and these anticodes are related to intersecting families an area that is part of extremal combinatorics This is one example that shows how we direct our exposition in this book to both researchers in coding theory and mathematicians interested in combinatorics and extremal combinatorics New perspectives for MDS codes different from the classic ones which lead to new directions of research on these codes are another example of how this book may appeal to both researchers in coding theory and mathematicians The book can also be used as a textbook either on basic course in combinatorial coding theory or as an advance course in combinatorial coding theory *Football Fans and Social Spacing* Ian Woolsey,2021-06-09 This book is about the relationship between leisure and power More specifically it theorizes a group of supporters attempts to control social space within and around English football stadiums Not only is football a popular leisure form it is also one which has undergone a remarkable process of transformation during the last 30 years Advance surveillance techniques all seater stadia rising ticket prices and a growing intolerance to expressive modes of fandom have all transformed the experience of watching the professional game Through these five chapters Ian Woolsey asks how the collective responses of travelling football supporters to these major societal currents and changes within the game liquid modernity and the post 1989 transformation of English football are managed via the distinct and oft competing processes of social spacing in football An important inspiration for the book is the

work of Zygmunt Bauman particularly his ideas on cognitive aesthetic and moral spacings as a social production Ian Woolsey's powerful and persuasive application of these ideas not only extends Bauman's focus on the politics of power in public space to include a consideration of leisure but in so doing shows that ethnography selectively conducted and theoretically informed can provide data for a rich sociological account of a football world The book will be of interest to researchers and scholars of sociology of leisure sociology of sport criminology and cultural studies

Strategic Equity Partnerships in Professional Football Tobias Duffner, 2020-07-28 The study explores the underlying motives and processes why and how corporate sponsors and professional football clubs in Germany enter into an additional share deal given the contradictory nature of corporations monetary driven and football clubs maximising sporting success while operating in economic equilibrium This work aims to generate theory within the specific field of professional football and to provide recommendations for action
