Cosmosapiens John Hands, 2015-11-05 A Daily Telegraph and TLS Book of the Year An audacious tour of all that science can teach us Edward O Wilson Specialist scientific fields are developing at incredibly swift speeds but what can they really tell us about how the universe began and how humans evolved to play such a dominant role on Earth John Hands's extraordinarily ambitious quest brings together our scientific knowledge and evaluates the theories and evidence about the origin and evolution of matter life consciousness and humankind *Cosmosapiens* provides the most comprehensive account yet of current ideas such as cosmic inflation dark energy the selfish gene and neurogenetic determinism In clear and accessible language Hands differentiates the firmly established from the speculative and examines the claims of various fields such as string theory to approach a unified theory of everything In doing so he challenges the orthodox consensus in those branches of cosmology biology and neuroscience that have ossified into dogma His striking analysis reveals underlying patterns of cooperation complexification and convergence that lead to the unique emergence in humans of a self reflective consciousness that enables us to determine our future evolution This groundbreaking book is destined to become a classic of scientific thinking

Colonizing Ourselves José Angel

Hernández,2024-10-15 In the late nineteenth century the Mexican government seeking to fortify its northern borders and curb migration to the United States set out to relocate Mexico Texano families or Tejanos on Mexican land In Colonizing Ourselves Jose Angel Herna ndez explores these movements back to Mexico also known as autocolonization as distinct in the history of settler colonization Unlike other settler colonial states that relied heavily on overseas settlers especially from Europe and Asia Mexico received less than 1 percent of these nineteenth century immigrants This reality coupled with the growing migration of farmers and laborers northward toward the United States led ultimately to passage of the 1883 Land and Colonization Law This legislation offered incentives to any Mexican in the United States willing to resettle in the republic Tejanos as well as other Mexican expatriates abroad were to be granted twice the amount of land for settlement that other immigrants received The campaign worked ethnic Mexicans from Texas and the Mexican interior as well as Indigenous peoples from Mexico established numerous colonies on the northern frontier Leading one of the most notable back to Mexico movements was Luis Siliceo a Texan who with a subsidized newspaper El Colono and the backing of Porfirio Di az s administration secured a contract to resettle Tejano families across several Mexican states The story of this partnership which Herna ndez traces from the 1890s through the turn of the century provides insight into debates about settler colonization in Mexico Viewed from various global national and regional perspectives it helps to make sense of Mexico s autocolonization policy and its redefinition of Indigenous and settler populations during the nineteenth century

Darwin Ever since the human mind developed the capacity for thought people have pondered not just the meaning of life but the genesis of the world the universe and all the natural marvels and precious forms of life within it To this day all of these intricate subjects continue to be matters of great contention and they are often best encapsulated in the debate between creationism and evolution On the one hand are those who are adamant that it was God or some other supreme being that designed and crafted every detail of the universe as evidenced by the plethora of creation myths from various creeds and traditions Among one of the most well known etiological tales is the classic story of the Christian God who constructed the world in 6 days and man and woman out of clay and man's rib respectively This is a concept that many still cling to today approximately 38% of Americans believed in creationism in 2017 as reported by a Gallup Poll Then there are the more obscure narratives such as the Japanese creation myth which recounts how the god and goddess Izanagi and Izanami birthed from elements mixed together with one germ of life shaped the Japanese islands with some mud and the aid of a sacred staff The Mayans preached about Tepeu the maker of all things and Gucumatz the feathered spirit who produced the world with nothing but their thoughts and placed on Earth the first quartet of humans fashioned out of white and yellow corn On the other hand are those who believe or as they would say accept evolution and scientific processes as facts As enthralling as such creation myths may be insist critics of creationism who campaign for their retirement there is not a sound shred of logic behind these time worn tales Renowned theoretical physicist Stephen Hawking arguably one of the most brilliant people to have ever lived stated Before we understand science it is natural to believe that God created the universe But now science offers a more convincing explanation His sentiments are echoed by famous atheist and evolutionary biologist Richard Dawkins in *The Selfish Gene* Today the theory of evolution is about as much open to doubt as the theory that the earth goes round the sun Some claim that evolution is just a theory as if it were merely an opinion esteemed astrophysicist Neil deGrasse Tyson another leading proponent of evolution adds The theory of evolution like the theory of gravity is a scientific fact Evolution really happened Accepting our kinship with all life on Earth is not only solid science In my view it's also a soaring spiritual experience Most scientists believe the evolution of humans has a history as long as life itself Anatomically modern humans and all other life that has existed on the planet first came about from the single celled microorganisms that emerged approximately 4 billion years ago Through the processes of mutation and natural selection all forms of life developed and this continuous lineage of life makes it difficult to say precisely when one species completely separates from another In other words scientists still debate when a human became a human rather than the ancestor species that came before In order to understand the history of human evolution an understanding of the mechanisms that essentially created modern humans needs to be understood These processes are natural selection and evolution Human Evolution The History of the Evolution and Natural Selection Processes that Gave Rise to Modern Humans examines how humans evolved from microorganisms and the evolutionary theories that came about in the 19th century to explain it all *The Origin of Our*

Species Chris Stringer, 2012 Chris Stringer's bestselling *The Origin of our Species* tackles the big questions in the ongoing debate about the beginnings of human life on earth. Do all humans originate from Africa? How did we spread across the globe? Are we separate from Neanderthals or do some of us actually have their genes? When did humans become modern? Are traits such as art, technology, language, ritual, and belief unique to us? Has human evolution stopped or are we still evolving? Chris Stringer has been involved in much of the crucial research into the origins of humanity and here he draws on a wealth of evidence from fossils and archaeology to Charles Darwin's theories and the mysteries of ancient DNA to reveal the definitive story of where we came from, how we lived, how we got here, and who we are. A new way of defining us and our place in history. *Sunday Times*. When it comes to human evolution, Chris Stringer is as close to the horse's mouth as it gets. *The Origin of Our Species* should be the one-stop source on the subject. Read it now. *BBC Focus*. Britain's foremost expert on human evolution, you need a primer to make sense of the story so far. Here is that book. *Guardian*. Combines anecdote and speculation with crisp explanation of the latest science in the study of the first humans, an engaging read. *New Scientist*. Chris Stringer is Britain's foremost expert on human origins and works in the Department of Palaeontology at the Natural History Museum. He also currently directs the Ancient Human Occupation of Britain project, aimed at reconstructing the first detailed history of how and when Britain was occupied by early humans. His previous books include *African Exodus: The Origins of Modern Humanity*, *The Complete World of Human Evolution*, and most recently *Homo Britannicus*, which was shortlisted for the Royal Society Science Book of the Year in 2007.

From Big Bang to Big Mystery Brendan M. Purcell, 2012 Everyone knows about the mystery of the Big Bang, what started it. This book is about the other creation mystery: where did human beings, in particular, come from? It traces the material part of our origins from the Big Bang through evolution, including the almost 7 million-year hominid sequence up to the first humans in Africa over 150,000 years ago. That data doesn't seem to explain what paleontologists and archaeologists call the Big Bang of Human Consciousness. In his fascinating, accessible, and thorough study, renowned priest and academic Brendan Purcell shows the complementarity that scientists, theologians, and philosophers bring to a deeper understanding of the mystery of human existence and human consciousness.

The Complete World of Human Evolution Chris Stringer, Peter Andrews, 2011-12-20 Human domination of the earth is now so complete that it is easy to forget how recently our role in the history of the planet began. The earliest apes evolved around twenty million years ago, yet *Homo sapiens* has existed for a mere 160,000 years. In the intervening period, dozens of species of early ape and human have lived and died out, leaving behind the fossilized remains that have helped to make the detailed picture of our evolution revealed here. Since this book was first published in 2005, there have been exciting new developments in the story of ape and human evolution, and the authors take account of them in this revised edition. The big gap in the fossil record in Africa is beginning to be filled with the discovery of several new species of apes in Kenya and Ethiopia that date from ten to nine million years ago. There are new discoveries of *Australopithecus*, updates on the dating of hominin sites.
