Crushed Ken Buck,2023-01-17 AMERICAN DEMOCRACY IS AT RISK No one conservative or liberal should be comfortable with a few Silicon Valley oligarchs having a monopoly over the marketplace of ideas and with it democracy itself Senator Ted Cruz When the Founding Fathers drafted our Constitution they had no idea there would be a Big Tech nor any concept of the immense power these companies would wield over our people But the Fathers did provide mechanisms a system of check and balances for the people to stop dangerous monopolies like Google Facebook Apple and Amazon from suffocating our business and political life Few know more about these mechanisms than Rep Ken Buck who has been a leader in Congress fighting against the unchecked power of Big Tech In CRUSHED Big Tech s War on Free Speech Buck exposes

the bullying and predatory behavior from the Big Tech giants who have used their technologies and their unbelievable market shares to stifle commerce and censor free speech He spells out the inside details of how these companies restrict free markets stop competition increase prices and ultimately hurt consumers Even worse Big Tech companies like Google Twitter and Facebook are actively censoring conservative news and views as they openly manipulate information provided to voters Ken Buck shows how these tech giants are true monopolies and their concentrated power pose a serious danger for our democracy In contrast to the robber barons of the Gilded Age who simply posed a threat to commerce Big Tech threatens the very core of our political system They control the flow of information shared with the public for their own financial and political gain In CRUSHED Ken Buck argues that while Americans are under siege by Big Tech we are not destroyed We can still take on Big tech fight back and even win The future of our nation depends on it he says IT IS TIME TO FIGHT BACK

Accelerating Monte Carlo methods for Bayesian inference in dynamical models Johan Dahlin, 2016-03-22 Making decisions and predictions from noisy observations are two important and challenging problems in many areas of society Some examples of applications are recommendation systems for online shopping and streaming services connecting genes with certain diseases and modelling climate change In this thesis we make use of Bayesian statistics to construct probabilistic models given prior information and historical data which can be used for decision support and predictions The main obstacle with this approach is that it often results in mathematical problems lacking analytical solutions To cope with this we make use of statistical simulation algorithms known as Monte Carlo methods to approximate the intractable solution These methods enjoy well understood statistical properties but are often computational prohibitive to employ The main contribution of this thesis is the exploration of different strategies for accelerating inference methods based on sequential Monte Carlo SMC and Markov chain Monte Carlo MCMC That is strategies for reducing the computational effort while keeping or improving the accuracy A major part of the thesis is devoted to proposing such strategies for the MCMC method known as the particle Metropolis Hastings PMH algorithm We investigate two strategies i introducing estimates of the gradient and Hessian of the target to better tailor the algorithm to the problem and ii introducing a positive correlation between the point wise estimates of the target Furthermore we propose

an algorithm based on the combination of SMC and Gaussian process optimisation which can provide reasonable estimates of the posterior but with a significant decrease in computational effort compared with PMH. Moreover we explore the use of sparseness priors for approximate inference in over parametrised mixed effects models and autoregressive processes. This can potentially be a practical strategy for inference in the big data era. Finally we propose a general method for increasing the accuracy of the parameter estimates in non linear state space models by applying a designed input signal.
