Exploring STEM Environments that Broaden Participation Tyrslai Williams, Renã A. S. Robinson, Zakiya S.

Wilson-Kennedy, 2025-09-16 Creating spaces conducive for all students pursuing degrees in STEM is a constant conversation in higher education. Studies establish the need for broad participation in STEM and the barriers in place that prevent matriculation through critical junctures. Through these studies, several suggestions and recommendations suggest supporting students through advising, mentoring, and research experience. Very little is discussed about the tools and strategies needed to enhance students' own development of self-efficacy and self-identity through mentorship in formal environments like the lab, classroom, and departments, but also in informal STEM environments like bridge programs, organizational involvement, and mentoring groups. While the environments seem very different, the mission of dynamic approaches to student progression is apparent. Furthermore, understanding how the support evolves at each critical juncture is critical to the way in which the future of STEM will advance.

Computer and Information Science Roger Lee, 2013-05-17 This edited book presents scientific results of the 12th IEEE ACIS International Conference on Computer and Information Science (ICIS 2013) which was held on June 16-20, 2013 in Toki Messe Niigata, Japan. The aim of this conference was to bring together scientists, engineers, computer users, and students to share their experiences and exchange new ideas, research results about all aspects, theory, applications, and tools of computer and information science, and to discuss the practical challenges encountered along the way and the solutions adopted to solve them. The conference organizers selected the best 20 papers from those papers accepted for presentation at the conference. The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review.

Communicating Science to the Public Leo Tan Wee Hin, R. Subramaniam, 2014-07-24 This book explores effective approaches for communicating science to the public in developing countries. Offering multiple perspectives on this important topic, it features 17 chapters that represent the efforts of 23 authors from eight countries: Australia, Bangladesh, India, Ireland, New Zealand, USA, Singapore, and South Africa. Inside, readers will find a diversity of approaches to communicate science to the public. The book also highlights some of the challenges that science communicators, science policy makers, science teachers, university academics in the sciences, and even entrepreneurs may face in their attempts to boost science literacy levels in their countries. In addition, it shares several best practices from the developed world that may help readers create communication initiatives that can lead to increased engagement with science in communities in the Asia Pacific region and beyond. Given the pervasive influence of science and technology in today's society, their impact will only increase in the years to come as the world becomes more globalized and the economies of countries become more interlinked.
