Thinking Like a Planet J. Baird Callicott, 2014-01-06 Bringing together ecology evolutionary moral psychology and environmental ethics J Baird Callicott counters the narrative of blame and despair that prevails in contemporary discussions of climate ethics and offers a fresh more optimistic approach Whereas other environmental ethicists limit themselves to what Callicott calls Rational Individualism in discussing the problem of climate change only to conclude that essentially there is little hope that anything will be done in the face of its perfect moral storm in Stephen Gardiner s words Callicott refuses to accept this view Instead he encourages us to look to the Earth itself and consider the crisis on grander spatial and temporal scales as we have failed to in the past Callicott supports this theory by exploring and enhancing Aldo Leopold s faint sketch of an Earth ethic in *Some Fundamentals of Conservation in the Southwest* a seldom studied text from the early days of environmental ethics that was written in 1923 but not published until 1979 after the environmental movement gathered strength Solar System , Catalog of Copyright Entries. Lovelock's Gaia* Mohammad Shamsudduha, 2017-07-05 *Gaia A New Look At Life on Earth* may continue to divide opinion but nobody can deny that the book offers a powerful insight into the creative thinking of its author James E Lovelock Published in 1979 *Gaia* offered a radically new hypothesis the Earth Lovelock argued is a living entity Together the planet and all its separate living organisms form a single self regulating body sustaining life and helping it evolve through time Lovelock sees humans as no more special than other elements of the planet railing against the once widely held belief that the good of mankind is the only thing that matters Despite being seen as radical and even idiotic on its publication a version of Lovelock s viewpoint has found resonance in contemporary debates about the environment and climate and has now broadly come to be accepted by modern thinkers As man s effects on the climate become increasingly extreme more and more elements of the Earth s self regulation seem to be unveiled forcing scientists to ask how far the planet might be able to go in order self regulate effectively Indeed despite its far fetched elements Lovelock s *Gaia* thesis seems to ring more convincingly today than ever before that it does is largely a result of the critical thinking skills that allowed Lovelock to produce novel
