Thinking the Problematic Oliver Leistert, Isabell Schrickel, 2020-10-08 The notion of the problematic has changed its meaning within the history of power and knowledge since the early 20th century leading up to today's performative neocybernetic fascination with generalized management ideas and technocratic models of science This book explores central scenes conceptual elaborations and practical affiliations of what historically has been called the problem or the problematic By way of considering modes of problematization as modes of inhabitation intervention and transformation the contributions map its current conceptual political uses as well as onto epistemological challenges Thus problematization is positioned as a critical concept that links often in intricate ways several currents from speculative philosophy to the formation of interdisciplinary fields The problematic as it turns out has been the source of change in philosophy and the sciences all along

Affects, Interfaces, Events Bodil Marie Stavning Thomsen, Jette Kofoed, Jonas Fritsch, 2021-03-01 This book engages with how affective encounters are shaped and conditioned by interfacial events Together the chapters explore the implications of this on a micro perceptual and macro relational level through an experimental middling of approaches and examples While broadly departing from a Spinozist and Deleuzian theoretical foundation the book weaves together a compelling number of conceptual and empirical trajectories Always attuned to the implications modulations and tonalities arising in the readings through art journalism bodies an archives data and design *Affects Interfaces Events* allows for a truly transdisciplinary resonance driven by theory technology and practice

Couplets Brian Massumi, 2021-08-09 In *Couplets* Brian Massumi presents twenty four essays that represent the full spectrum of his work during the past thirty years Conceived as a companion volume to *Parables for the Virtual* *Couplets* addresses the key concepts of *Parables* from different angles and contextualizes them allowing their stakes to be more fully felt Rather than organizing the essays chronologically or by topic Massumi pairs them into couplets to encourage readers to make connections across conventional subject matter categories to encounter disjunctions and to link different phases in the evolution of his work In his analyses of topics ranging from art affect and architecture to media theory political theory and the philosophy of experience Massumi charts a field on which a family of conceptual problems plays out in ways that bear on the potentials for acting and perceiving the world As an essential guide to Massumi's oeuvre *Couplets* is both a primer for his new readers and a supplemental resource for those already engaged with his thought

Technólogos in Being Wolfgang Ernst, 2021-05-06 Wolfgang Ernst's new work *Technólogos in Being* in its explicit media scientific approach aligns with the politics of the thinking media series to publish innovative works that advance media studies towards the new sciences Ernst's invites readers to re-adjust their ideas of Media Studies the conviction that an extended understanding of medium needs to include a concept of materiality that focuses on non human agencies as well The book grounds media analysis radically in the technological apparatuses relays transistors hard and software to precisely locate the scenes operations and frictions where reasoning logos and informable

matter interfere *The Care of Things* Jerome Denis, David Pontille, 2025-01-22 What does a coffee machine a car road signs a smartphone a cathedral a work of art a satellite a bicycle a washing machine a bridge a watch a computer the body of a prominent politician and a tractor have in common Pretty much nothing except for the fact that no matter how small large important or insignificant something is it rarely survives without being cared for Every object eventually experiences wear and tear it deteriorates stops working or breaks down But are we giving the care of things the recognition it deserves A counterpoint to our modern obsession with innovation but less striking than the one off act of restoration the delicate act of making things last rarely attracts our attention This book disrupts our dominant narratives by putting those individuals skilled in the art of maintenance front and centre J r me Denis and David Pontille shine a spotlight on the subtle aspects of caring for things tracing the stories of those involved and with them the ethical challenges raised and political lessons learned These people demonstrate a sensitivity and attentiveness to fragility they encourage us to cultivate a material diplomacy in which wear is accepted and our relation to things becomes a matter of negotiation and compromise a far cry from the frenetic rhythm of planned obsolescence inherent in hyper consumerism Maintenance demarcates the contours of a world in which we have relinquished the human longing for unlimited power and technological autonomy a world where our attachment to things is more profound than we ever imagined **Misogyny Online** Emma A. Jane, 2016-10-19 Misogyny Online explores the worldwide phenomenon of gendered cyberhate as a significant discourse which has been overlooked and marginalised The rapid growth of the internet has led to numerous opportunities and benefits however the architecture of the cybersphere offers users unprecedented opportunities to engage in hate speech A leading international researcher in this field Emma A Jane weaves together data and theory from multiple disciplines and expresses her findings in a style that is engaging witty and powerful Misogyny Online is an important read for students and faculty members alike across the social sciences and humanities Steps toward a Philosophy of Engineering Carl Mitcham, 2019-12-06 The rise of classic Euro American philosophy of technology in the 1950s originally emphasized the importance of technologies as material entities and their mediating influence within human experience Recent decades however have witnessed a subtle shift toward reflection on the activity from which these distinctly modern artifacts emerge and through which they are engaged and managed that is on engineering What is engineering What is the meaning of engineering How is engineering related to other aspects of human existence Such basic questions readily engage all major branches of philosophy ontology epistemology ethics political philosophy and aesthetics although not always to the same degree The historico philosophical and critical reflections collected here record a series of halting steps to think through engineering and the engineered way of life that we all increasingly live in what has been called the Anthropocene The aim is not to promote an ideology for engineering but to stimulate deeper reflection among engineers and non engineers alike about some basic challenges of our engineered and engineering lifeworld **Online Tutor 2.0: Methodologies and Case Studies for Successful Learning** García-Peñalvo,

Francisco José, Seoane Pardo, Antonio Miguel, 2014-03-31 After centuries of rethinking education and learning the current theory is based on technology's approach to and affect on the planned interaction between knowledge trainers and trainees Online Tutor 2.0 Methodologies and Case Studies for Successful Learning demonstrates through the exposure of successful cases in online education and training the necessity of the human factor particularly in teaching tutoring roles for ensuring the development of quality and excellent learning activities The didactic patterns derived from these experiences and methodologies will provide a basis for a more powerful and efficient new generation of technology based learning solutions for high school teachers university professors researchers and students at all levels of education **Opening digital**

fabrication: transforming TechKnowledgies Schneider, Christoph, 2018-09-05 This study analyses the field of open digital fabrication where novel digital capabilities and hopes for social transformation have merged to form arrangements that seek to democratise knowledge and technology through collaboration Through qualitative social science the study analyses FabLabs and open source technologies and the respective collective procedures that produce and organise technology and knowledge that redefine the entanglement of our society and its technologies *Algorithms* Tobias Matzner, 2023-10-02 Algorithms Technology Culture Politics develops a relational situated approach to algorithms It takes a middle ground between theories that give the algorithm a singular and stable meaning in using it as a central analytic category for contemporary society and theories that dissolve the term into the details of empirical studies The book discusses algorithms in relation to hardware and material conditions code data and subjects such as users programmers but also data doubles The individual chapters bridge critical discussions on bias exclusion or responsibility with the necessary detail on the contemporary state of information technology The examples include state of the art applications of machine learning such as self driving cars and large language models such as GPT The book will be of interest for everyone engaging critically with algorithms particularly in the social sciences media studies STS political theory or philosophy With its broad scope it can serve as a high level introduction that picks up and builds on more than two decades of critical research on algorithms

Digital Technologies, Temporality, and the Politics of Co-Existence Mark Coeckelbergh, 2023-01-01 Our digital existence is hurried and fast We are tied to the present or perhaps we are not present enough immersed in digital social media and processes by artificial intelligence we are hardly present to ourselves and to others and feel alienated from nature We are also made to fear climate change and the end of humanity How can we live a good life and give meaning to our lives under these conditions How can and should we co exist today Using process philosophy narrative theory and the concept of technoperformances this book analyzes how digital technologies shape our relation to time and our existence and discusses what this means in the light of climate change and new technologies such as AI In dialogue with contemporary philosophy of technology and media theory and asking original questions about finding common times in what it calls the Anthropochrone it proposes a conceptual framework that helps us to understand how we should exist and relate to time today **Anarchism**

After Deleuze and Guattari Chantelle Gray, 2022-07-28 Deleuze and Guattari never identified as anarchists nor do they seem to know much about its historical development or continued praxis Yet their individual and collective work belies this apparent and wilful oversight through a steady consideration of revolutionary subjectivity and active political experimentation Chantelle Gray argues that while we cannot and should not attempt to call them anarchists their work resonates with core anarchist principles such as prefiguration careful experimentation and emergent strategies aimed at creating a feeling that life is worth living This involves paying attention to both joyous affects and sad passions which necessitates the affirmation of all of chance and from that fabricating new modes of existence By bringing together the philosophy of Deleuze and Guattari with the theory and practices of anarchism this book demonstrates that fabricating the future is nothing short of a noetic act making reasonable something which initially was senseless **Malleable, Digital, and Posthuman** Ignas Kalpokas, 2021-09-10 This book proposes a posthumanist research methodology for future research in the areas of the economy the human self politics and research ethics providing a novel explanatory and methodological framework for studying today's world **Time and Education** Petra Mikulan, Nathalie Sinclair, 2023-01-12 Despite pervading all aspects of educational practice and theory little scholarship focuses on time in education This book addresses that lacuna questioning our assumptions about time and their ramifications on theories of learning issues of equity and diversity and on the purposes of education itself The authors examine ideas about time in a wide variety of contexts from ancient Greek fiction to 19th century theories of evolution and from 20th century indigenous stories to 20th century afro futurist fiction They show how pervasive the image of time as an arrow has become an image of time that is one way singular and teleological Through exploring other theories of time the authors propose alternatives for time in education They argue that time is one of the key biopolitical tools we think and operate with but rarely address as a historical cultural and pedagogical category with which schools reproduce oppressive structures around race class and gender in society The book draws on ideas from the arts and the sciences to illustrate and trouble assumptions of time drawing on artistic and theoretic work from douard Glissant Henri Lefebvre Giordano Nanni Denise Ferreira da Silva Bonnie Honig and others

Decolonizing Science in Latin American Art Joanna Page , 2021-04-15 Projects that bring the hard sciences into art are increasingly being exhibited in galleries and museums across the world In a surge of publications on the subject few focus on regions beyond Europe and the Anglophone world Decolonizing Science in Latin American Art assembles a new corpus of art science projects by Latin American artists ranging from big budget collaborations with NASA and MIT to homegrown experiments in artists kitchens While they draw on recent scientific research these art projects also decolonize science If increasing knowledge of the natural world has often gone hand in hand with our objectification and exploitation of it the artists studied here emphasize the subjectivity and intelligence of other species staging new forms of collaboration and co creativity beyond the human They design technologies that work with organic processes to promote the health of ecosystems

and seek alternatives to the logics of extractivism and monoculture farming that have caused extensive ecological damage in Latin America They develop do it yourself open source commons based practices for sharing creative and intellectual property They establish critical dialogues between Western science and indigenous thought reconnecting a disembodied abstracted form of knowledge with the cultural social spiritual and ethical spheres of experience from which it has often been excluded Decolonizing Science in Latin American Art interrogates how artistic practices may communicate extend supplement and challenge scientific ideas At the same time it explores broader questions in the field of art including the relationship between knowledge care and curation nonhuman agency art and utility and changing approaches to participation It also highlights important contributions by Latin American thinkers to themes of global significance including the Anthropocene climate change and environmental justice

The Pedagogics of Unlearning Aidan Seery, Éamonn Dunne, 2016 What does it mean to unlearn Once we have learned something is it ever possible to unlearn that something If something is said to have been unlearned does that mean that it is simply forgotten or does some residual force of learning some perverse force also resonate in ways that might help us to rethink traditional approaches to teaching and learning Might we say that education today is haunted by the spectre of unlearning This book invites readers to reflect on the possibilities of knowing reflecting understanding teaching and learning in ways that allow us to imagine the other side of education the side which understands non knowledge ignorance stupidity and wonder as potentially the most important learning experiences we can ever have In a series of provocative essays by some of the world's most renowned theorists in philosophy psychoanalysis cultural studies politics and education *The Pedagogics of Unlearning* challenges us to think again about what we mean when we talk about learning about what it really means to learn and whether the kinds of learning we imagine in our classrooms and daily lives are actually synonymous with the sort of learning we envision when we think and talk about the purpose and passage of education If you think you know what education and learning are doing what teaching strategies do and what learning outcomes are then this book asks you to think again to unlearn what you have learned to learn to unlearn

The Noise in Noise Miguel Prado Casanova, 2023-11-20 This book aims to thoroughly examine noise's conceptual potencies and explore and amplify its epistemic consequences The author explores the prospect of different contextures of a present made volatile by noise In a moment when our species exhibits the capacity

of global scale coordination and the design of robust adaptable social systems we need to review the way in which we can harness uncertainty randomness and noise This philosophical work is informed by many different fields of contemporary science in order to assess and highlight the problems of the metascientific and ideological foundations of diverse projects of prediction and control of uncertainty This conveys an analysis of how contemporary prediction technologies are dramatically transforming our relationship with the future and with uncertainty in a great number of our social structures **I Confess!** Thomas Waugh, Brandon Arroyo, 2019-11-21 In the postwar decades sexual revolutions first women s suffrage flappers Prohibition and Mae West later Alfred Kinsey Hugh Hefner and the pill altered the lifestyles and desires of generations Since the 1990s the internet and its cataclysmic cultural and social technological shifts have unleashed a third sexual revolution crystallized in the acts and rituals of confession that are a staple of our twenty first century lives In I Confess a collection of thirty original essays leading international scholars such as Ken Plummer Susanna Paasonen Tom Roach and Shohini Ghosh explore the ideas of confession and sexuality in moving image arts and media mostly in the Global North over the last quarter century Through self referencing or autobiographical stories testimonies and performances and through rigorously scrutinized case studies of gay for pay gaming camming YouTube uploads and the films Tarnation and Nymph maniac the contributors describe a spectrum of identities desires and related representational practices Together these desires and practices shape how we see construct and live our identities within this third sexual revolution embodying both its ominous implications of surveillance and control and its utopian glimmers of community and liberation Inspired by theorists from Michel Foucault and Gilles Deleuze to Gayle Rubin and Jos Esteban Muñoz I Confess reflects an extraordinary paradigm shifting proliferation of first person voices and imagery produced during the third sexual revolution from the eve of the internet to today **Creation and the Function of Art** Jason Tuckwell, 2017-11-30 Returning to the Greek understanding of art to rethink its capacities Creation and the Function of Art focuses on the relationship between techn and physis nature Moving away from the theoretical Platonism which dominates contemporary understandings of art this book instead reinvigorates Aristotelian causation Beginning with the Greek topos and turning to insights from philosophy pure mathematics psychoanalysis and biology Jason Tuckwell re problematises techn in functional terms This book examines the deviations at play within logical forms the subject and upon physis to better situate the role of the function in poiesis art In so doing Tuckwell argues that art concerns a genuinely creative labour that cannot be resolved via an ontological or epistemological problem but which instead constitutes an encounter with the problematic As such techn is shown to be a property of the living of intelligence coupled to action that not only enacts poiesis or art but indicates a broader role for creative deviation in nature Screen Genealogies Craig Buckley, Rüdiger Campe, Francesco Casetti, 2025-10-01 Against the grain of the growing literature on screens Screen Genealogies argues that the present excess of screens cannot be understood as an expansion and multiplication of the movie screen nor of the video display Rather screens continually exceed

the optical histories in which they are most commonly inscribed As contemporary screens become increasingly decomposed into a distributed field of technologically interconnected surfaces and interfaces we more readily recognize the deeper spatial and environmental interventions that have long been a property of screens For most of its history a screen was a filter a divide a shelter or a camouflage A genealogy stressing transformation and descent rather than origins and roots emphasizes a deeper set of intersecting and competing definitions of the screen enabling new thinking about what the screen might yet become
