Embedded System Design: Topics, Techniques and Trends Achim Rettberg, Mauro Zanella, Rainer Dömer, Andreas Gerstlauer, Franz Rammig, 2010-05-09 Over recent years embedded systems have gained an enormous amount of processing power and functionality. Many of the formerly external components can now be integrated into a single System on Chip. This tendency has resulted in a dramatic reduction in the size and cost of embedded systems. As a unique technology, the design of embedded systems is an essential element of many innovations. Embedded System Design: Topics, Techniques and Trends presents the technical program of the International Embedded Systems Symposium IESS 2007 held in Irvine, California. IESS is a unique forum to present novel ideas, exchange timely research results, and discuss the state of the art and future trends in the field of embedded systems. Contributors and participants from both industry and academia take active part in this symposium. The IESS conference is organized by the Computer Systems Technology committee TC10 of the International Federation for Information Processing (IFIP). Timely topics, techniques, and trends in embedded system design are covered by the chapters in this book, including design methodology, specification and modeling, embedded software and hardware synthesis, networks on chip, distributed and networked systems, and system verification and validation. Particular emphasis is paid to automotive and medical applications. A set of actual case studies and special aspects in embedded system design are included as well.
