An IT and Security Comparison Decision Support System for Wireless LANs Kevin T. Reynolds, 2004 Are all Wireless LANs equal A network administrator is faced with a plethora of wireless services complex radio issues and products for wireless data There are brand new protocols and products that could become obsolete a day after installation Over 40% of all deployed WLANs do not even have minimum security activated exposing the company s network and records to easy outsider access The WLAN industry is characterized by rapidly changing incomplete or proprietary standards which can impact interoperability goals There are complicated ownership costs performance limitations and security configurations that exist for WLANs which many network administrators may not understand or know how to compare This dissertation presents a decision support system DSS that enables a novice network administrator to compare WLAN protocol capabilities rank security configurations rate IT cost efforts and use an extensive feature list An in depth discussion concerning WLAN protocols virtual private networks VPNs various encryption algorithms 802.1X authentication mechanisms and compilation of network selection criteria provides the foundation to construct a small DSS to aid WLAN network administrators The DSS uses a set of rules to evaluate a series of potential requirements and provides pertinent WLAN decision making information The DSS environment allows a number of specific what if scenarios to be reviewed and compared multiple solutions can be tried without having to deal with the consequences Alternative technologies are listed by the DSS to educate the decision maker about other options

An Interdisciplinary Approach to Modern Network Security Sabyasachi Pramanik, Anand Sharma, Surbhi

Bhatia, Dac-Nhuong Le, 2022-05-02 *An Interdisciplinary Approach to Modern Network Security* presents the latest methodologies and trends in detecting and preventing network threats. Investigating the potential of current and emerging security technologies, this publication is an all-inclusive reference source for academicians, researchers, students, professionals, practitioners, network analysts, and technology specialists interested in the simulation and application of computer network protection. It presents theoretical frameworks and the latest research findings in network security technologies while analyzing malicious threats which can compromise network integrity. It discusses the security and optimization of computer networks for use in a variety of disciplines and fields. Touching on such matters as mobile and VPN security, IP spoofing, and intrusion detection, this edited collection emboldens the efforts of researchers, academics, and network administrators working in both the public and private sectors. This edited compilation includes chapters covering topics such as attacks and countermeasures, mobile wireless networking, intrusion detection systems, next generation firewalls, web security, and much more. Information and communication systems are an essential component of our society, forcing us to become dependent on these infrastructures. At the same time, these systems are undergoing a convergence and interconnection process that has its benefits but also raises specific threats to user interests. Citizens and organizations must feel safe when using cyberspace facilities in order to benefit from its advantages. This book is interdisciplinary in the sense that it covers a wide range of topics like network security threats, attacks, tools, and procedures to mitigate the effects of malware and common network attacks, network security architecture, and deep learning methods of intrusion detection. *Industrial Networks and Intelligent Systems* Nguyen-Son Vo, Dac-Binh Ha, Haejoon Jung, 2025-11-20 This book constitutes the refereed proceedings of the 11th EAI International Conference on Industrial Networks and Intelligent Systems INISCOM 2025 held in Da Nang, Vietnam during February 20-21, 2025.
