Lee, 2018-12-24 This is the first comprehensive study in English on the social institutional and intellectual aspects of traditional Chinese education The book introduces the Confucian ideal of studying for one's own sake but argues that various intellectual traditions combined to create China's educational legacy The book studies the development of schools and the examination system the interaction between state society and education and the vicissitudes of the private academies It examines family education life of intellectuals and the conventions of intellectual discourse It also discusses the formation of the tradition of classical learning and presents the first detailed account of student movements in traditional China with an extensive bibliography While a general survey this book includes various new ideas and inquiries It concludes with a critical evaluation of China's rich educational experiences **Artificial Intelligence for Advanced Problem Solving Techniques**

Vlahavas, Ioannis, Vrakas, Dimitris, 2008-01-31 One of the most important functions of artificial intelligence automated problem solving consists mainly of the development of software systems designed to find solutions to problems These systems utilize a search space and algorithms in order to reach a solution Artificial Intelligence for Advanced Problem Solving Techniques offers scholars and practitioners cutting edge research on algorithms and techniques such as search domain independent heuristics scheduling constraint satisfaction optimization configuration and planning and highlights the relationship between the search categories and the various ways a specific application can be modeled and solved using advanced problem solving techniques *AI Adoption and Inequality* Emma J Rockall, Ms. Marina Mendes Tavares, Carlo Pizzinelli, 2025-04-04 There are competing narratives about artificial intelligence's impact on inequality Some argue AI will exacerbate economic disparities while others suggest it could reduce inequality by primarily disrupting high income jobs Using household microdata and a calibrated task based model we show these narratives reflect different channels through which AI affects the economy Unlike previous waves of automation that increased both wage and wealth inequality AI could reduce wage inequality through the displacement of high income workers However two factors may counter this effect these workers tasks appear highly complementary with AI potentially increasing their productivity and they are better positioned to benefit from higher capital returns When firms can choose how much AI to adopt the wealth inequality effect is particularly pronounced as the potential cost savings from automating high wage tasks drive significantly higher adoption rates Models that ignore this adoption decision risk understating the trade off policymakers face between inequality and efficiency
