With clarity and compassion, this book describes clinically tested mindfulness practices specifically tailored for anxiety in its many forms. Hard-fought and friendly, it provides practical instructions on how to stay centered when our children are suffering. Anne Lamott, bestselling author, moves from helplessness to stability in challenging times through the practice of mindful equanimity. By adopting a spiritual approach to parenting and caregiving, you can protect yourself from burnout, increase your resilience, and develop a greater sense of empathy and balance. Drawn from Buddhist wisdom, this new approach to showing up in overwhelming circumstances is about slowing down, letting go of the illusion of control, and caring for yourself so that you can be a presence of love and support even in the most difficult moments. We love our children more deeply than our own selves yet are powerless to keep them from pain. Drawing from her

own experience parenting her children through clinical depression suicidal ideation and physical injury Celia Landman guides parents at their limit back from helplessness toward stability through the ancient practice of equanimity or balance Contemporary neuroscience and developmental psychology research demonstrates how a parent's state of anxiety is directly communicated to the child and can intensify their pain When the Whole World Tips is rich with real life examples from parents in the midst of caring for children in crisis plentiful resources and helpful exercises Each chapter offers accessible practices for parents to care for themselves in order to remain present for their children Landman gently guides parents to restore their own balance by keeping their hearts open and their hands loose on the wheel of control as their child's life unfolds This shift into equanimity can bring relief to both child and parent Woven throughout are practices to help parents experience how their emotional state of being is as important as what they do when we recognize that being a presence of love and care is already doing something of great value we can reconnect with purpose and restore our trust that we are capable and enough

Predictions in the Brain Moshe Bar,2011-05-10 When one is immersed in the fascinating world of neuroscience findings the brain might start to seem like a collection of modules each specializes in a specific mental feat But just like in other domains of Nature it is possible that much of the brain and mind s operation can be explained with a small set of universal principles Given exciting recent developments in theory empirical findings and computational studies it seems that the generation of predictions might be one strong candidate for such a universal principle This is the focus of *Predictions in the brain* From the predictions required when a rat navigates a maze to food caching in scrub jays from predictions essential in decision making to social interactions from predictions in the retina to the prefrontal cortex and from predictions in early development to foresight in non humans The perspectives represented in this collection span a spectrum from the cellular underpinnings to the computational principles underlying future related mental processes and from systems neuroscience to cognition and emotion In spite of this diversity they share some core elements Memory for instance is critical in any framework that explains predictions In asking what is next our brains have to refer to memory and experience on the way to simulating our mental future But as much as this collection offers answers to important questions it raises and emphasizes outstanding ones How are experiences coded optimally to afford using them for predictions How do we construct a new simulation from separate memories How specific in detail are future oriented thoughts and when do they rely on imagery concepts or language Therefore in addition to presenting the state of the art of research and ideas about predictions as a universal principle in mind and brain it is hoped that this collection will stimulate important new research into the foundations of our mental lives
