Hands-On GPU Computing with Python Avimanyu Bandyopadhyay, 2019-05-14 Explore GPU enabled programmable environment for machine learning scientific applications and gaming using PuCUDA PyOpenGL and Anaconda Accelerate Key Features Understand effective synchronization strategies for faster processing using GPUs Write parallel processing scripts with PyCuda and PyOpenCL Learn to use the CUDA libraries like CuDNN for deep learning on GPUs Book Description GPUs are proving to be excellent general purpose parallel computing solutions for high performance tasks such as deep learning and scientific computing This book will be your guide to getting started with GPU computing It will start with introducing GPU computing and explain the architecture and programming models for GPUs You will learn by example how to perform GPU programming with Python and you ll look at using integrations such as PyCUDA PyOpenCL CuPy and Numba with Anaconda for various tasks such as machine learning and data mining Going further you will get to grips with GPU work flows management and deployment using modern containerization solutions Toward the end of the book you will get familiar with the principles of distributed computing for training machine learning models and enhancing efficiency and performance By the end of this book you will be able to set up a GPU ecosystem for running complex applications and data models that demand great processing capabilities and be able to efficiently manage memory to compute your application effectively and quickly What you will learn Utilize Python libraries and frameworks for GPU acceleration Set up a GPU enabled programmable machine learning environment on your system with Anaconda Deploy your machine learning system on cloud containers with illustrated examples Explore PyCUDA and PyOpenCL and compare them with platforms such as CUDA OpenCL and ROCm Perform data mining tasks with machine learning models on GPUs Extend your knowledge of GPU computing in scientific applications Who this book is for Data Scientist Machine Learning enthusiasts and professionals who wants to get started with GPU computation and perform the complex tasks with low latency Intermediate knowledge of Python programming is assumed

Parallel and High Performance Computing Robert Robey, Yuliana Zamora, 2021-06-22 Complex calculations like training deep learning models or running large scale simulations can take an extremely long time Efficient parallel programming can save hours or even days of computing time Parallel and High Performance Computing shows you how to deliver faster run times greater scalability and increased energy efficiency to your programs by mastering parallel techniques for multicore processor and GPU hardware about the technology Modern computing hardware comes equipped with multicore CPUs and GPUs that can process numerous instruction sets simultaneously Parallel computing takes advantage of this now standard computer architecture to execute multiple operations at the same time offering the potential for applications that run faster are more energy efficient and can be scaled to tackle problems that demand large computational capabilities But to get these benefits you must change the way you design and write software Taking advantage of the tools algorithms and design patterns created specifically for parallel processing is essential to creating top

performing applications about the book *Parallel and High Performance Computing* is an irreplaceable guide for anyone who needs to maximize application performance and reduce execution time. Parallel computing experts Robert Robey and Yuliana Zamora take a fundamental approach to parallel programming providing novice practitioners the skills needed to tackle any high performance computing project with modern CPU and GPU hardware. Get under the hood of parallel computing architecture and learn to evaluate hardware performance, scale up your resources to tackle larger problem sizes and deliver a level of energy efficiency that makes high performance possible on hand held devices. When you're done you'll be able to build parallel programs that are reliable, robust and require minimal code maintenance. This book is unique in its breadth with discussions of parallel algorithms, techniques to successfully develop parallel programs and wide coverage of the most effective languages for the CPU and GPU. The programming paradigms include MPI, OpenMP, threading and vectorization for the CPU. For the GPU the book covers OpenMP and OpenACC directive based approaches and the native based CUDA and OpenCL languages. What's inside: Steps for planning a new parallel project, Choosing the right data structures and algorithms, Addressing underperforming kernels and loops, The differences in CPU and GPU architecture about the reader. For experienced programmers with proficiency in a high performance computing language such as C, C++ or Fortran about the authors: Robert Robey has been active in the field of parallel computing for over 30 years. He works at Los Alamos National Laboratory and has previously worked at the University of New Mexico where he started up the Albuquerque High Performance Computing Center. Yuliana Zamora has lectured on efficient programming of modern hardware at national conferences based on her work developing applications running on tens of thousands of processing cores and the latest GPU architectures.

[Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow](#) Aurélien Géron, 2019-09-05. Through a series of recent breakthroughs, deep learning has boosted the entire field of machine learning. Now even programmers who know close to nothing about this technology can use simple, efficient tools to implement programs capable of learning from data. This practical book shows you how. By using concrete examples, minimal theory, and two production-ready Python frameworks, Scikit-Learn and TensorFlow, author Aurélien Geron helps you gain an intuitive understanding of the concepts and tools for building intelligent systems. You'll learn a range of techniques starting with simple linear regression and progressing to deep neural networks. With exercises in each chapter to help you apply what you've learned, all you need is programming experience to get started. Explore the machine learning landscape, particularly neural networks. Use Scikit-Learn to track an example machine learning project end-to-end. Explore several training models including support vector machines, decision trees, random forests, and ensemble methods. Use the TensorFlow library to build and train neural networks. Dive into neural network architectures including convolutional networks, recurrent networks, and deep reinforcement learning. Learn techniques for training and scaling deep neural networks.

Contemporary High Performance Computing Jeffrey S. Vetter, 2017-11-23. Contemporary High Performance Computing: From Petascale toward Exascale focuses on the ecosystems surrounding the world's leading

centers for high performance computing HPC It covers many of the important factors involved in each ecosystem computer architectures software applications facilities and sponsors The first part of the book examines significant trends in HPC systems including computer architectures applications performance and software It discusses the growth from terascale to petascale computing and the influence of the TOP500 and Green500 lists The second part of the book provides a comprehensive overview of 18 HPC ecosystems from around the world Each chapter in this section describes programmatic motivation for HPC and their important applications a flagship HPC system overview covering computer architecture system software programming systems storage visualization and analytics support and an overview of their data center facility The last part of the book addresses the role of clouds and grids in HPC including chapters on the Magellan FutureGrid and LLGrid projects With contributions from top researchers directly involved in designing deploying and using these supercomputing systems this book captures a global picture of the state of the art in HPC *Maximum PC* ,2008-03
