Origins of Human Neuropathology: The Significance of Teneurin-Latrophilin Interaction David A.

Lovejoy,Antony A. Boucard,Richard P. Tucker,2020-07-22 We are delighted to introduce this new special issue on The Origins of Neuropathology The Roles of Teneurins and Latrophilins Although the title may seem particularly bold and indeed perhaps presumptuous we the editors think our title well warranted based on the findings and interpretation provided by a dedicated group of researchers who have developed this field over the last 25 years In this publication we introduce the readers to researchers whom have pioneered this field and those whom have played an essential role in developing this research direction Now together their combined work have elucidated a novel ligandreceptor network that evolved during the earliest period of animal evolution and has fostered a new insight into the ancient evolutionary organization of the central nervous system CNS Specifically this work offers a new understanding of several aspects of neuropathology including degenerative psychiatric and mood disorders and furthermore illuminates a fundamental role that teneurins and latrophilins play in cell to cell metabolism that may be associated with various forms of cancer both within and outside of the brain In 1994 the laboratories of Professors Ron Wides in Israel and Ruth Chiquet Ehrismann working in Switzerland independently reported the existence of a novel transmembrane protein and its gene in Drosophila A complex gene protein its closest homologue was that of the tenascins The gene was named either odd oz odz or tenascin major ten m by these researchers Subsequent studies

indicated that the gene was highly expressed in the brains of vertebrates and the term teneurin was coined to reflect both its relationship with tenascins and with the CNS. Around the same time as these studies, a novel G protein coupled receptor was identified by Yuri Ushkaryov and his team in the United Kingdom; in fact, the latrophilins then named C1RL calcium independent receptor for a latrotoxin was first identified by the group of Petrenko at NYU Medical Center in New York, USA, which was subsequently established as a cognate receptor for the teneurins. This receptor was later termed as the latrophilins and more recently Adhesion receptor G protein coupled receptor family L or ADGRL. In Part 1 of this publication, the early history on the origin and discovery of teneurins has been described by Stefan Baumgartner and Ron Wides. Ron Wides and Richard Tucker. Recent structural studies by Verity Jackson and her colleagues as well as Demet Arae and Jingxian Li have provided molecular models to understand how teneurins are ensconced in the plasma membrane and play a role in synaptic interaction. In addition, their work integrates the molecular mechanisms with the early evolution of both teneurins and latrophilins. In Part 2, four studies build upon the evolutionary development of teneurins by examining its role in nematodes by Ulrike Topf and Krzysztof Drabikowski, a model of teneurin action in the *Drosophila* nervous system by Alison DePew and associates, and two studies on fish. Angela Cheung and her colleagues describe the neurological function and expression in zebrafish, whereas Ross Reid and his coworkers have described novel actions of the teneurins with respect to metabolism in fish. Part 3 of this publication is focused on the latrophilins and is led off by Yuri Ushkaryov and his team describing the discovery, structure, and function of the latrophilins. This work is followed by a review by Ana Moreno Salinas and colleagues in Antony Boucard's laboratory describing the structure of the latrophilins and its interaction with associated transmembrane proteins with respect to adhesion, neuronal function, and pathology. The following paper by Torsten Schnerberg and Simone Prömel links the previous papers with a comparison of teneurin and latrophilin interactions in invertebrates and vertebrates. Finally, in this section, Peter Burbach and Dimphe Meijer provide an interesting overview of the relationship of teneurins and latrophilins with respect to other proteins described in these other papers. Together, these studies provide a novel understanding of how the teneurins and latrophilins interact in a complex set of associated proteins. The next section, Part 4 of the publication, focuses on the development and maintenance of the CNS in mammals. Here, Catherine Leamey and Atsuo Sawatari lead off with a discussion of the role of teneurin associated neuro circuit formation using knockout studies in mice. A detailed review by Luciane Sita and her colleagues in the Bittencourt laboratory frames this and previous studies in a comparative neuroanatomical background and in addition provides a neuroanatomical rationale for new studies associated with other regions of the CNS. Building upon these studies, David Hogg and his coworkers include a review on the behavioral actions of the teneurin C terminal associated peptide TCAP in mammals and its potential relationship to brain metabolism and forms of neuropathology. Finally, in this section, a study by Gesttner Tessarin in the Casatti laboratory shows for the first time teneurins may be associated with astrocyte function, indicating a novel function for teneurins with respect to some glial

based disorders in the brain Finally in our last section we have provided some studies on the potential roles of the teneurins and latrophilins with respect to carcinogenesis Although these studies are somewhat removed from our treatise on the role of teneurins and latrophilins with respect to neuronal development maintenance and pathology they provide interesting observations that may be relevant to some types of CNS pathology Thus Boris Rebolledo Jaramillo and Annemarie Ziegler include a review on the relationship of teneurins to several types of cancers This is followed by a research report by Mia Husi and her colleagues suggesting that the TCAP region of the teneurins could play a role in modulating the adhesion of the cancer like cell line HEK293 and finally Sussy Bastias Candia and associates have provided novel data on the role of teneurin 3 with respect to Wnt signalling and have discussed its potential role in neural development and carcinogenesis Overall we posit that the teneurins and latrophilins played a major role in the early evolution of the nervous system and may underlie the etiology of a number of neurological disorders that are thus far misunderstood Indeed we hope that this publication will stimulate further research into the actions of teneurins and latrophilins and lead to novel approaches of understanding and ultimately treatment

Obituary Ruth Chiquet Ehrismann 1954 2015 A Teneurin Pioneer A major player in the discovery and characterization of teneurins was the Swiss scientist Ruth Chiquet Ehrismann Dr Chiquet Ehrismann had a long standing interest in cell cell and cell extracellular matrix interactions particularly during development and tumorigenesis She earned her Ph D at the ETH Zurich under the mentorship of David C Turner where she performed early work on the cell and heparin binding sites of fibronectin Shortly after joining the Friedrich Miescher Institute in Basel as a junior group leader in 1984 Ruth in collaboration with Eleanor J Mackie and Teruyo Sakakura published a paper in Cell describing an extracellular matrix glycoprotein that she named tenascin A key observation made in this widely cited paper was the presence of tenascin in the extracellular matrix of embryonic tissues and the stroma of breast cancer but its absence from most normal adult tissues We now know that the original tenascin was the founding member of a diverse gene family and that members of this family promote cell motility proliferation and differentiation in a variety of tissue environments both normal and pathological But in the early 1990s it was unclear how tenascins functioned Specifically its receptors and binding partners were not understood Subsequently Ruth engaged in a multi pronged approach to studying tenascin function in an attempt to identify its homologues in Drosophila This work led by her postdoctoral fellow Dr Stefan Baumgartner resulted in the discovery of a novel family of type 2 transmembrane proteins that they named ten a and ten m for tenascin like proteins accessory and major When the homologues of ten a and ten m were found in vertebrates and they were shown to be highly expressed in the nervous system Ruth proposed the name teneurins This name combined the names of the original proteins from Drosophila with neurons which appeared to be their most prominent site of expression From that point onward Ruth s research group at the Friedrich Miescher Institute studied two topics the roles of tenascins in cancer and the roles of teneurins in development Using numerous model systems her research included studies of teneurins in arthropods Drosophila nematodes C elegans

and chordates birds and humans Key firsts that came from Ruth's laboratory include the cloning and sequencing of human teneurins experimental evidence of teneurin processing by furin and the potential nuclear localization of the intracellular domain the ability of teneurins to promote growth cone spreading patterning defects in teneurin knockout animals a description of the ancient origins of teneurins via horizontal gene transfer the complementary expression patterns of different teneurins during development the cytotoxic properties of the teneurin C terminal domain and the presence of homotypic adhesion domains in teneurins Since 1994 Ruth's group published 24 papers on the cloning expression origins and functions of teneurins Contributing to these papers were 15 graduate students and postdoctoral fellows often with the expert technical guidance of Jacqueline Ferralli Marianne Brown Luedi and Doris Martin This work has provided a foundation for a new generation of researchers in the field of teneurins Ruth Chiquet-Ehrismann passed away at her home near Basel on September 4 2015 She is survived by her husband and collaborator Matthias Chiquet three children Daniel Patrice and Fabian and an expanding cohort of grandchildren Richard P Tucker Davis California

Exercise and Sport Sciences Reviews, 2002 **A comprehensive look at biomarkers in neurodegenerative diseases: from early diagnosis to treatment response assessment** Riccardo Pascuzzo, Federico Angelo Cazzaniga, Yi Min Wan, Fulvia Palesi, 2025-08-18

Neurodegenerative diseases NDs represent an increasing global health challenge affecting millions of people worldwide and placing a significant burden on healthcare systems Key molecular pathways of numerous NDs such as Alzheimer's disease Parkinson's disease and prion diseases consist of the misfolding aggregation and accumulation of specific proteins in the brain preceding the clinical manifestation of symptoms These proteins have been extensively investigated in clinical research studies with the aim of identifying potential biomarkers for improving the diagnosis and prognosis of NDs *Scientific*

Free Will, Responsibility, and Crime Ken M. Levy, 2019-08-28 In his book philosopher and law professor Ken Levy explains why he agrees with most people but not with most other philosophers about free will and responsibility Most people believe that we have both that is that our choices decisions and actions are neither determined nor undetermined but rather fully self determined By contrast most philosophers understand just how difficult it is to defend this metaphysical libertarian position So they tend to opt for two other theories responsibility skepticism which denies the very possibility of free will and responsibility and compatibilism which reduces free will and responsibility to properties that are compatible with determinism In opposition to both of these theories Levy explains how free will and responsibility are indeed metaphysically possible But he also cautions against the dogma that metaphysical libertarianism is actually true a widespread belief that continues to cause serious social political and legal harms Levy s book presents a crisp tight historically informed discussion with fresh clarity insight and originality It will become one of the definitive resources for students academics and general readers in this critical intersection among metaphysics ethics and criminal law Key features Presents a unique qualified defense of metaphysical libertarianism the idea that our choices decisions and actions can be fully self determined Written clearly accessibly and with minimal jargon rare for a book on the very difficult issues of free will and responsibility Seamlessly connects philosophical legal psychological and political issues Will be provocative and insightful for professional
