Dear [Dr./Mr./Ms./Mx.] [Hiring Manager's Last Name],

I'm writing to express my interest in a postdoctoral research position in your lab at Harvard University, which I discovered through your lab website. I recently received my Ph.D. from the Chemistry Department at Columbia University under the supervision of Dr. John Smith. In my thesis work, I applied my skills in structural chemistry to characterize chromatin factors involved in human cancer. As your lab uses chemistry to investigate cancer epigenetics and functional genomics, I believe my diverse technical skills and interest in cancer research make me an ideal fit for your lab.

One major part of my thesis work was the isolation of the protein MADP-1, which has eluded purification by the field for six years. Having tried three conventional methods to isolate MADP-1, I tackled the problem through development of a novel purification scheme. I then determined the contacts between MADP-1 and PRC2 by X-ray crystallography. As the Smith Lab specializes in the study of metabolic signaling proteins - rather than chromatin factors - involved in cancer, I pioneered three chromatin assays in our lab. To further elevate the MADP-1 project, I collaborated with chromatin expert Dr. Maria Curry Lab at Stanford. Therefore, I am not afraid to go where the research takes me, and value being both an independent as well as highly collaborative researcher.

I am particularly interested in your work in cancer epigenetics, specifically your recent publications using CRISPR/Cas9-induced mutagenesis for genome-wide screens. Having planned and executed three high-throughput drug screens and assisted with two genetic screens, I am confident that I can apply my previous experience to perform similar screens in your laboratory. Additionally, I trained four undergraduates during my PhD. Specifically, I taught bench techniques, oversaw experiments, and edited their scientific writing, such as conference posters and senior theses. As a postdoctoral researcher at your laboratory, it would be a privilege to continue mentoring junior researchers.

I believe my resourceful and collaborative nature, interdisciplinary technical skills, and interest in disease research make me well-suited to work in your lab. I look forward to discussing more with you about my fit within your research group. Thank you for your time and consideration.

Sincerely,

Jane Webster

A Survival Guide for Research Scientists Ratna Tantra, 2019-08-31

Research scientists play a pivotal role in society. Their passion for science will drive them forward, leading to new discoveries that will ultimately make the world a better place. Unfortunately, as the professional environment becomes more and more competitive, research scientists today cannot just rely on technical knowledge to carve successful careers. Besides technical skills, they will need to acquire other skills, such as how to communicate their science to the outside world. A Survival Guide for Research Scientists is a one-stop shop that will help you to develop those core skills not often taught at school or university. The book has been written by an author with more than 20 years of scientific research experience across different scientific disciplines. She has not only been a research scientist but also a writer, a consultant, a sole trader, and a project manager. A Survival Guide for Research Scientists takes on a holistic approach in order to help you pave the way for success. As such, it features practical guidelines on how to conduct your scientific research, how to do literature review, design experiments, adopt best practice, ensure health and safety, etc., write and edit reports, bid proposals, peer review publications, etc., interact with the outside world, be a team leader, manage a project, network, deal with difficult people, do presentations, organise meetings, etc., look after your career, and get your dream.

K. Sjøberg, 2007-11-21 Empirical studies have become an important part of software engineering research and practice Ten years ago it was rare to see a conference or journal article about a software development tool or process that had empirical data to back up the claims Today in contrast it is becoming more and more common that software engineering conferences and journals are not only publishing but eliciting articles that describe a study or evaluation Moreover a very successful conference International Symposium on Empirical Software Engineering and Measurement journal Empirical Software Engineering and organization International Software Engineering Research Network have all evolved in the last 10 years that focus solely on this area As a further illustration of the growth of empirical software engineering a search in the articles of 10 software engineering journals showed that the proportion of articles that used the term empirical software engineering doubled from about 6% in 1997 to about 12% in 2006 While empirical software engineering has seen such substantial growth there is not yet a reference book that describes advanced techniques for running studies and their application This book aims to fill that gap The chapters are written by some of the top international empirical software engineering researchers and focus on the practical knowledge necessary for conducting reporting and using empirical methods in software engineering The book is intended to serve as a standard reference **The Art of Discussion-Based Teaching** John Henning, 2007-10-18 The Art of Discussion Based Teaching a singular tool for practicing and pre service K 12 teachers guides readers through the process of creating ideal conditions for a discussion anticipating students responses and guiding the direction of a discussion **Science Communication** Laura Bowater, Kay Yeoman, 2012-12-26 Science communication is a rapidly expanding area and meaningful engagement between scientists and the public requires effective communication Designed to help the novice scientist get started with science communication this unique guide begins with a short history of science communication before discussing the design and delivery of an effective engagement event Along with numerous case studies written by highly regarded international contributors the book discusses how to approach face to face science communication and engagement activities with the public while providing tips to avoid potential pitfalls This book has been written for scientists at all stages of their career
