technological solutions in Industry 5.0 that can be used for business competitive advantage and sustainability. The book presents tools that can help reduce time and make use of data in an efficient way while using resources efficiently and sustainably. The book aims to highlight technological sustainability through promoting innovations, improving social development, and providing green products that benefit the society. The authors discuss the recent technological advancements such as Artificial Intelligence (AI), Internet of Things (IoT), Financial Technology (FinTech), Big Data, and Blockchain. They also discuss the benefits of incorporating such technologies in areas such as green supply chain, storage technology, Internet banking, and nanotechnology. The target audience of this book includes all interested individuals and institutions in the fields of engineering, business technology, and public services. The book provides insights and solutions to many issues and creates opportunities for further sustainability.

Artificial Intelligence and Machine Learning Applications for Sustainable Development A. J. Singh, Nikita Gupta, Sanjay Kumar, Sumit Sharma, Subho Upadhyay, Sandeep Kumar, 2025-01-28. The book highlights how technologies including artificial intelligence and machine learning are transforming renewable energy technologies and enabling the development of new solutions. It further discusses how smart technologies are employed to optimize energy production and storage, enhance energy efficiency, and improve the overall sustainability of energy systems. This book discusses artificial intelligence-based techniques, namely neural networks, fuzzy expert systems, optimization techniques, and operational research. It showcases the importance of artificial intelligence and machine learning in the energy market, demand analysis, and forecasting of renewable energy applications. It illustrates strategies for sustainable development using artificial intelligence and machine learning applications. It presents applications of artificial intelligence in the domain of electronics, transformation, and development of smart cities and renewable energy utilization. It highlights the role of artificial intelligence in solving problems such as image and signal processing, smart weather monitoring, smart farming, and distributed energy sources. It is primarily written for senior undergraduates, graduate students, and academic researchers in diverse fields including electrical, electronics, and communications, energy, and environmental engineering.
