Sleep Hacks Ai Overview This Month:

The EU Artificial Intelligence Act Rostam J. Neuwirth, 2022-08-15 AI in combination with other innovative technologies promises to bring unprecedented opportunities to all aspects of life. These technologies however hold great dangers especially for the manipulation of the human mind which have given rise to serious ethical concerns. Apart from some sectoral regulatory efforts to address these concerns no regulatory framework for AI has yet been adopted though in 2021 the European Commission of the EU published a draft Act on Artificial Intelligence and UNESCO followed suit with a Recommendation on the Ethics of Artificial Intelligence. The book contextualises the future regulation of AI specifically addressing the regulatory challenges relating to the planned prohibition of the use of AI systems that deploy subliminal techniques. The convergence of AI with various related technologies such as brain computer interfaces functional magnetic resonance imaging robotics and big data already allows for mind reading or dream hacking through brain spyware as well as other practices that intrude on cognition and the right to freedom of thought. Future innovations will enhance the possibilities for manipulating thoughts and behaviour and they threaten to cause serious harm to individuals as well as to society as a whole. The issue of subliminal perception and the ability to deceive and manipulate the mind below the threshold of awareness causes severe difficulties for law and democracy and raises important questions for the future of society. This book shows how cognitive technological and legal questions are intrinsically interwoven and aims to stimulate an urgently needed transdisciplinary and transnational debate between students academics practitioners policymakers and citizens interested not only in the law but also in disciplines including computer science neuroscience sociology political science marketing and psychology.

Hacking Neuroplasticity Joyce Shaffer, 2024-11-29 Neuroplasticity is the ability of neural networks in the brain to change through growth and reorganization. It is when the brain is rewired to function in some way that differs from how it previously functioned. How does aging affect neuroplasticity? As we grow older plasticity decreases to stabilize what we have already learned. What influence does the aging process have on memory? Forgetfulness can be a normal part of aging. As people get older changes occur in all parts of the body including the brain. As a result some people may notice that it takes longer to learn new things they don't remember information as well as they did or they lose things like their glasses. This book on evolving neuroscience is unique in its lifespan focus on driving neuroplasticity in a positive direction to influence the Flynn effect of increasing human intelligence as the preferred way to prevent delay onset and or reverse dementia. It considers potential impact from the first moments of life through end of life. It includes intergenerational activities. Its inclusion of centenarians and supercentenarians provides examples of Super Agers who have maintained and or increased neurocognitive capacity often with a health span that approximated their vigorous longevity. It discusses the use of the Artificial Intelligence AI revolution to refine personalize and broaden our global reach to enhance the Flynn effect as the preferred effort to improve global statistics on neurocognitive functioning at any age. Driving neuroplasticity in a positive

direction at all ages is urgent With this book's focus on evidence based interventions at any age which can have physical emotional neurobiological neurochemical immunological and social health benefits it is a unique overview and application of evolving neuroscience to address the UN WHO Decade of Action for Healthy Ageing for All
