Perfect Codes And Related Structures Tuvi Etzion,2022-03-14 In this monograph we develop the theory of one of the most fascinating topics in coding theory namely perfect codes and related structures Perfect codes are considered to be the most beautiful structure in coding theory at least from the mathematical side These codes are the largest ones with their given parameters The book develops the theory of these codes in various metrics Hamming Johnson Lee Grassmann as well as in other spaces and metrics It also covers other related structures such as diameter perfect codes quasi perfect codes mixed codes tilings combinatorial designs and more The goal is to give the aspects of all these codes to derive bounds on their sizes and present various constructions for these codes The intention is to offer a different perspective for the area of perfect codes For example in many chapters there is a section devoted to diameter perfect codes In these codes anticodes

are used instead of balls and these anticodes are related to intersecting families an area that is part of extremal combinatorics This is one example that shows how we direct our exposition in this book to both researchers in coding theory and mathematicians interested in combinatorics and extremal combinatorics New perspectives for MDS codes different from the classic ones which lead to new directions of research on these codes are another example of how this book may appeal to both researchers in coding theory and mathematicians The book can also be used as a textbook either on basic course in combinatorial coding theory or as an advance course in combinatorial coding theory
