technology that's now so readily available to the home market. Whatever the reason, the home theater market today is booming like the soundtrack to Star Wars. Want proof? A Google search for home theater reveals over three million results. Yikes! It's simply undeniable. More and more people prefer watching their favorite movies, television shows, and videos from the comfort of their own sofas and couches. What's also undeniable is the inexperience of most people who choose to install or upgrade their home theaters. Until now, the knowledge, technique, and experiences of those who've encountered similar conditions to yours could only be accessed through laborious web searches, stacks of magazines, and water cooler conversations. *Home Theater Hacks* from O'Reilly is the perfect remedy for this group. A smart collection of insider tips and tricks, *Home Theater Hacks* covers home theater installation from start to finish, purchase to experience. Just imagine: no frustrating trial and error process, and better yet, no expensive appointments with installation experts. *Home Theater Hacks* prevents both by imparting down-and-dirty technique not found anywhere else. The book begins with a quick glossary of terms so you can speak the lingo when you go shopping, and then dives right into hush-hush insider tricks. It's all covered: where to find the right audio and video components, how to deal with speakers and wiring, understanding cable connectivity, mastering remote controls, how to fully grasp TiVo, and so much more. And to top it off, each of these insider tips is presented in a concise yet delightfully entertaining style. Bringing the Jurassic Park dinosaurs into your living room has never been so easy. A seasoned veteran with numerous O'Reilly titles under his belt, author Brett McLaughlin leaves no stone unturned in helping you customize your home theater experience to your own personal environment. *Fitness for Geeks* Bruce

1. The autonomic nervous system is the ultimate expression of the push-pull relationship between your Upstate and Downstate. It works in your favor when well-tuned but can conspire against you when your response to stress creeps unchecked into your life.
2. I was a late bloomer when it came to learning about the brain. I had spent my childhood dreaming of a career on the stage and screen, but after several hundred cattle call auditions, I realized that I needed to find another way to make it in this life.
3. The human brain is not just a circuit board of wires and resistors, but a biological organ composed of billions of neurons. Neurons are limited in resources and they require programmed breaks that grant time to recharge and prepare for the next power punch.
4. Neurons have two states: resting and firing. As the neuron moves between these two states, electrically charged ions flow between the inside and outside of the cell walls. At rest, there are far more negatively charged ions inside the cell than outside, with a resting membrane potential of 70mV.
