Technology of the Oppressed David Nemer, 2022-02-15 How Brazilian favela residents engage with and appropriate technologies both to fight the oppression in their lives and to represent themselves in the world Brazilian favelas are impoverished settlements usually located on hillsides or the outskirts of a city In *Technology of the Oppressed* David Nemer draws on extensive ethnographic fieldwork to provide a rich account of how favela residents engage with technology in community technology centers and in their everyday lives Their stories

reveal the structural violence of the information age But they also show how those oppressed by technology don't just reject it but consciously resist and appropriate it and how their experiences with digital technologies enable them to navigate both digital and nondigital sources of oppression and even at times to flourish Nemer uses a decolonial and intersectional framework called Mundane Technology as an analytical tool to understand how digital technologies can simultaneously be sites of oppression and tools in the fight for freedom Building on the work of the Brazilian educator and philosopher Paulo Freire he shows how the favela residents appropriate everyday technologies technological artifacts cell phones Facebook operations repair and spaces Telecenters and Lan Houses and use them to alleviate the oppression in their everyday lives He also addresses the relationship of misinformation to radicalization and the rise of the new far right Contrary to the simplistic techno optimistic belief that technology will save the poor even with access to technology these marginalized people face numerous sources of oppression including technological biases racism classism sexism and censorship Yet the spirit love community resilience and resistance of favela residents make possible their pursuit of freedom

Behind the Cloud Peter Seele, Lucas Zapf, 2022-03-01 Thoughts are free but they are no longer secret

Today our data is automatically stored and analyzed by algorithms behind the cloud where we no longer have control over our data. Our most private and secret information is entrusted to the internet and permanently collected, stacked and linked to our digital twins. With and without our consent, privacy is dead as Mark Zuckerberg put it. The question is: How did we get there? And if the actors behind the cloud know everything, what is still private today and are there any personal secrets at all when the gods behind the cloud possibly know us better than our friends and family? The book uses a wealth of case studies, e.g. cryptocurrencies, journalism, digital traces of sexual preferences, to develop a typology of privacy in the history of ideas. Furthermore, it shows the areas of life in which big data and artificial intelligence have already made inroads. This book is a translation of the original German 2nd edition *Die Rückseite der Cloud* by Peter Seele and Lucas Zapf, published by Springer Verlag GmbH, Germany, part of Springer Nature, in 2020. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation.

Les intelligences artificielles au prisme de la justice sociale. Considering Artificial Intelligence Through the Lens of Social Justice Collectif

Collectif, 2024-07-24T00:00:00-04:00 Cet ouvrage vient clôturer deux années de réflexion intensive sur les enjeux à l'intersection entre la justice sociale et les technologies d'IA. Une compréhension de ces impacts sociétaux passe alors l'aspect technique pour se concentrer principalement sur le fait social.

Data Profiling and Insurance Law Brendan McGurk KC, 2019-03-21

The winner of the 2020 British Insurance Law Association Book Prize, this timely expertly written book looks at the legal impact that the use of Big Data will have on the provision and substantive law of insurance. Insurance companies are set to become some of the biggest consumers of big data, which will enable them to profile prospective individual insureds at an increasingly granular level. More particularly, the book explores how i) insurers gain access to information relevant to assessing risk and/or the pricing of premiums; ii) the impact which that increased information will have on substantive insurance law and in particular duties of good faith disclosure and fair presentation of risk; and iii) the impact that insurers' new knowledge may have on individual and group access to insurance. This raises several consequential legal questions: i) To what extent is the use of big data analytics to profile risk compatible at least in the EU with the General Data Protection Regulation? ii) Does insurers' ability to parse vast quantities of individual data about insureds invert the information asymmetry that has historically existed between insured and insurer, such as to breathe life into insurers' duty of good faith disclosure? And iii) by what means might legal challenges be brought against insurers both in relation to the use of big data and the consequences it may have on access to cover? Written by a leading expert in the field, this book will both stimulate further debate and operate as a reference text for academics and practitioners who are faced with emerging legal problems arising from the increasing opportunities that big data offers to the insurance industry.
