Mapping and the Citizen Sensor Giles Foody,Linda See,Steffen Fritz,Peter Mooney,Ana-Maria

Olteanu-Raimond,Cidália Costa Fonte,Vyron Antoniou,2017-09-11 Maps are a fundamental resource in a diverse array of applications ranging from everyday activities such as route planning through the legal demarcation of space to scientific studies such as those seeking to understand biodiversity and inform the design of nature reserves for species conservation For a map to have value it should provide an accurate and timely representation of the phenomenon depicted and this can be a challenge in a dynamic world Fortunately mapping activities have benefitted greatly from recent advances in geoinformation technologies Satellite remote sensing for example now offers unparalleled data acquisition and authoritative mapping agencies have developed systems for the routine production of maps in accordance with strict standards Until recently much mapping activity was in the exclusive realm of authoritative agencies but technological development has also allowed the rise of the amateur mapping community The proliferation of inexpensive and highly mobile and location aware devices together with Web 2 0 technology have fostered the emergence of the citizen as a source of data Mapping presently benefits from vast amounts of spatial data as well as people able to provide observations of geographic phenomena which can inform map production revision and evaluation The great potential of these developments is however often limited by concerns The latter span issues from the nature of the citizens through the way data are collected and shared to the quality and trustworthiness of the data This book reports on some of the key issues connected with the use of citizen sensors in mapping It arises from a European Co operation in Science and Technology COST Action which explored issues linked to topics ranging from citizen motivation data acquisition data quality and the use of citizen derived data in the production of maps that rival and sometimes surpass maps arising from authoritative agencies

Evaluation and comparison of Ajax Frameworks regarding applicability, productivity and technical limitations Lukas Ostermaier,2008-03-11

Inhaltsangabe Abstract For some years the Internet has been dominated by phrases like Web 2 0 and Ajax The catchword Web 2 0 which was originally established by O Reilly at the first Web 2 0 conference in October 2004 not only describes a new way of perception and usage of the internet e g social software like blogs wikis etc but also stands for more or less innovative techniques as for instance RSS or Ajax The latter is a combination of techniques that have been available since the late 1990s such as JavaScript asynchronous requests and XML However the term Ajax only exists since Jesse James Garret introduced it in his article in February 2005 Since then Ajax has experienced a real hype Google Mail Google Maps or Flickr just serve as examples for the mass of applications that have to attribute their success substantially to Ajax When it comes to web application development there has also been a lot of progress in the field of Ajax Ajax frameworks of all kinds massively gained popularity and flooded the development community From the biggest companies through to small development teams

almost everyone has published his own Ajax framework or library in the last two years In the meantime there are far more than 150 different frameworks for various programming languages and diverse aims Because of this uncontrolled growth of frameworks it is quite difficult to say which of those is most suitable for a specific project There are two key questions that have to be considered in case of Ajax or Rich Internet Applications RIAs in general How can Ajax significantly increase the business value of an application and how can it be applied productively This thesis mainly focuses on the latter question by evaluating three Ajax frameworks of large companies with a strong background by means of an example application with respect to commercial applicability productivity performance as well as enhancement and adaptation possibilities Furthermore this work discusses the technical limitations and problems of Ajax and provides an outlook on future developments in this area As example application for the evaluation a web based tracking system for public transportation is implemented Each single vehicle is visualized on a street map according to its current position By the implementation of this application with each of the three chosen Ajax frameworks their applicability productivity and performance is illustrated as well as

Proceedings of the 20th Congress of the International Ergonomics Association (IEA 2018) Sebastiano Bagnara,Riccardo Tartaglia,Sara Albolino,Thomas Alexander,Yushi Fujita,2018-08-04 This book presents the proceedings of the 20th Congress of the International Ergonomics Association IEA 2018 held on August 26 30 2018 in Florence Italy By highlighting the latest theories and models as well as cutting edge technologies and applications and by combining findings from a range of disciplines including engineering design robotics healthcare management computer science human biology and behavioral science it provides researchers and practitioners alike with a comprehensive timely guide on human factors and ergonomics It also offers an excellent source of innovative ideas to stimulate future discussions and developments aimed at applying knowledge and techniques to optimize system performance while at the same time promoting the health safety and wellbeing of individuals The proceedings include papers from researchers and practitioners scientists and physicians institutional leaders managers and policy makers that contribute to constructing the Human Factors and Ergonomics approach across a variety of methodologies domains and productive sectors This volume includes papers addressing the following topics Safety and Health and Slips Trips and Falls *Advanced Logic Synthesis* André Inácio Reis,Rolf Drechsler,2017-11-15 This book provides a single source reference to the state of the art in logic synthesis Readers will benefit from the authors expert perspectives on new technologies and logic synthesis new data structures big data and logic synthesis and convergent logic synthesis The authors describe techniques that will enable readers to take advantage of recent advances in big data techniques and frameworks in order to have better logic synthesis algorithms Modern Trends in Cartography Jan Brus,Alena Vondrakova,Vit Vozenilek,2014-12-02 The fast exchange of information and knowledge are the essential conditions for successful and effective research and practical applications in cartography For successful research

development it is necessary to follow trends not only in this domain but also try to adapt new trends and technologies from other areas Trends in cartography are also quite often topics of many conferences which have the main aim to link research education and application experts in cartography and GIS T into one large platform Such the right place for exchange and sharing of knowledge and skills was also the CARTOCON2014 conference which took place in Olomouc Czech Republic in February 2014 and this book is a compilation of the best and most interesting contributions The book content consists of four parts The first part New approaches in map and atlas making collects studies about innovative ways in map production and atlases compilation Following part of the book Progress in web cartography brings examples and tools for web map presentation The third part Advanced methods in map use includes achievement of eye tracking research and users issues The final part Cartography in practice and research is a clear evidence that cartography and maps played the significant role in many geosciences and in many branches of the society Each individual paper is original and has its place in cartography

Geoinformatics in Citizen Science Gloria Bordogna, 2019-07-01 The book features contributions that report original research in the theoretical technological and social aspects of geoinformation methods as applied to supporting citizen science Specifically the book focuses on the technological aspects of the field and their application toward the recruitment of volunteers and the collection management and analysis of geotagged information to support volunteer involvement in scientific projects Internationally renowned research groups share research in three areas First the key methods of geoinformatics within citizen science initiatives to support scientists in discovering new knowledge in specific application domains or in performing relevant activities such as reliable geodata filtering management analysis synthesis sharing and visualization second the critical aspects of citizen science initiatives that call for emerging or novel approaches of geoinformatics to acquire and handle geoinformation and third novel geoinformatics research that could serve in support of citizen science
