Science Experiments Compare:

An International Comparison of Science Teaching and Learning. Further Results from PISA 2006 Mareike Kobarg, Manfred Prenzel, Tina Seidel, 2011 The OECD Programme for International Student Assessment PISA assesses the competencies of 15 year old students around the world In 2006 the PISA report focused on the science competencies 15 year old students developed The report does not reflect a systematic consideration of science learning environments in schools and their relationship to cognitive and motivational outcomes in terms of scientific literacy However in all investigated countries schools are where young people become familiar with science over an extended period of time Hence this book aims to provide detailed information on science teaching and learning in schools in the OECD countries Data from the PISA 2006 school principals and students questionnaires is used for the description of science teaching and learning First the context of science teaching in schools is described to provide a background for the analyses that follow Then the book draws a detailed picture of different components of science teaching relevant for student learning In addition international patterns of science teaching and learning are investigated The investigation focuses on the teaching of scientific enquiry This focus is chosen because the process of scientific enquiry models the way in which researchers think and it provides students with ample opportunities to develop science literacy Further investigations include the effects of different patterns of science teaching on student literacy The book concludes with implications for policy and practice

The Aesthetics of Scientific Experiments Milena Ivanova, Alice Murphy, 2023-06-16 The relationship between aesthetics and science has begun to generate substantial interest However for the most part the focus has been on the beauty of theories and other aspects of scientific practice have been neglected This book offers a novel perspective on aesthetics in experimentation via ten original essays from an interdisciplinary group comprised of philosophers historians of science and art and artists The collection provides an analysis of the concept of beauty in the evaluation of experiments What properties do practising experimenters value How have the aesthetic properties of scientific experiments changed over the years Secondly the volume looks at the role that aesthetic factors including negative values such as ugliness as well as experiences of the sublime and the profound play in the construction of an experiment and its reception Thirdly the chapters provide in depth historical case studies from the Royal Society which also allows for a study of the depiction of scientific experiment in artworks as well as contemporary examples from the Large Hadron Collider and cases of experiments designed by artificial intelligence Finally it offers an exploration of the commonalities between how we learn from experiments on the one hand and the cognitive value of artworks on the other The Aesthetics of Scientific Experiments will be of interest to researchers and advanced students working in philosophy and history of science philosophy and history of art as well as practising scientists and science communicators

Science Vs. Religion Elaine Howard Ecklund, 2010-05-06 That the longstanding antagonism between science and religion is irreconcilable has been taken for granted And in the wake of recent controversies over teaching

intelligent design and the ethics of stem cell research the divide seems as unbridgeable as ever In *Science vs Religion* Elaine Howard Ecklund investigates this unexamined assumption in the first systematic study of what scientists actually think and feel about religion In the course of her research Ecklund surveyed nearly 1 700 scientists and interviewed 275 of them She finds that most of what we believe about the faith lives of elite scientists is wrong Nearly 50 percent of them are religious Many others are what she calls spiritual entrepreneurs seeking creative ways to work with the tensions between science and faith outside the constraints of traditional religion The book centers around vivid portraits of 10 representative men and women working in the natural and social sciences at top American research universities Ecklund s respondents run the gamut from Margaret a chemist who teaches a Sunday school class to Arik a physicist who chose not to believe in God well before he decided to become a scientist Only a small minority are actively hostile to religion Ecklund reveals how scientists believers and skeptics alike are struggling to engage the increasing number of religious students in their classrooms and argues that many scientists are searching for boundary pioneers to cross the picket lines separating science and religion With broad implications for education science funding and the thorny ethical questions surrounding stem cell research cloning and other cutting edge scientific endeavors *Science vs Religion* brings a welcome dose of reality to the science and religion debates
