Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models Jorge Garza Ulloa, 2021-11-30 Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models focuses on the relationship between three different multidisciplinary branches of engineering Biomedical Engineering Cognitive Science and Computer Science through Artificial Intelligence models These models will be used to study how the nervous system and musculoskeletal system obey movement orders from the brain as well as the mental processes of the information during cognition when injuries and neurologic diseases are present in the human body The interaction between these three areas are studied in this book with the objective of obtaining AI models on injuries and neurologic diseases of the human body studying diseases of the brain spine and the nerves that connect them with the musculoskeletal system There are more than 600 diseases of the nervous system including brain tumors epilepsy Parkinson s disease stroke and many others These diseases affect the human cognitive system that sends orders from the central nervous system CNS through the peripheral nervous systems PNS to do tasks using the musculoskeletal system These actions can be detected by many Bioinstruments Biomedical Instruments and cognitive device data allowing us to apply AI using Machine Learning Deep Learning Cognitive Computing models through algorithms to analyze detect classify and forecast the process of various illnesses diseases and injuries of the human body Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models provides readers with the study of injuries illness and neurological diseases of the human body through Artificial Intelligence using Machine Learning ML Deep Learning DL and Cognitive Computing CC models based on algorithms developed with MATLAB and IBM Watson Provides an introduction to Cognitive science cognitive computing and human cognitive relation to help in the solution of AI Biomedical engineering problems Explain different Artificial Intelligence AI including evolutionary algorithms to emulate natural evolution reinforced learning Artificial Neural Network ANN type and cognitive learning and to obtain many AI models for Biomedical Engineering problems Includes coverage of the evolution Artificial Intelligence through Machine Learning ML Deep Learning DL Cognitive Computing CC using MATLAB as a programming language with many add on MATLAB toolboxes and AI based commercial products cloud services

as IBM Cognitive Computing IBM Watson IBM Watson Studio IBM Watson Studio Visual Recognition and others Provides the necessary tools to accelerate obtaining results for the analysis of injuries illness and neurologic diseases that can be detected through the static kinetics and kinematics and natural body language data and medical imaging techniques applying AI using ML DL CC algorithms with the objective of obtaining appropriate conclusions to create solutions that improve the quality of life of patients

Convergence of Blockchain and Internet of Things in Healthcare Arun Kumar Rana,Vishnu Sharma,Ajay Rana,Maksud Alam,Suman Lata Tripathi,2024-04-22 The Internet of Things IoT and blockchain are two new technologies that combine elements in many ways A system where the virtual and physical worlds interact is created by integrating pervasive computing ubiquitous computing communication technologies sensing technologies Internet Protocol and embedded devices A massive number of linked devices and vast amounts of data present new prospects for developing services that can directly benefit the economy environment society and individual residents Due to the size of IoT and insufficient data security security breaches may have a huge impact and negative effects IoT not only connects gadgets but also people and other entities leaving every IoT component open to a wide variety of assaults The implementation and application of IoT and blockchain technology in actual scientific biomedical and data applications are covered in this book The book highlights important advancements in health science research and development by applying the distinctive capabilities inherent to distributed ledger systems Each chapter describes the current uses of blockchain in real world data collection medicine development device tracking and more meaningful patient interaction All of these are used to create opportunities for expanding health science research This paradigm change is studied from the perspectives of pharmaceutical executives biotechnology entrepreneurs regulatory bodies ethical review boards and blockchain developers Key Features Provides a foundation for the implementation process of blockchain and IoT devices based on healthcare related technology Image processing and IoT device researchers can correlate their work with other requirements of advanced technology in the healthcare domain Conveys the latest technology including artificial intelligence and machine learning in healthcare related technology Useful for the researcher to explore new things like security cryptography and privacy in healthcare related technology Tailored for people who want to start in healthcare related technology with blockchain and IoT This book is primarily for senior undergraduates graduate students and academic researchers in the fields of electrical engineering electronics and communication engineering computer science and engineering and biomedical engineering
