Organizing Locally Bruce Fuller, 2015-04-14 We love the local. From the cherries we buy to the grocer who sells them to the school where our child unpacks them for lunch, we express resurgent faith in decentralizing the institutions and businesses that arrange our daily lives. But the fact is that huge bureaucratic organizations often still shape the character of our jobs, schools, the groceries where we shop, and even the hospitals we entrust with our lives. So how exactly can we work small when everything around us is so big, so global and standardized? In *Organizing Locally*, Bruce Fuller shows us taking stock of America's rekindled commitment to localism across an illuminating range of sectors, unearthing the crucial values and practices of decentralized firms that work. Fuller first untangles the economic and cultural currents that have eroded the efficacy of and our trust in large institutions over the past half century. From there, we meet intrepid leaders who have been doing things differently: traveling from a charter school in San Francisco to a veterans service network in Iowa, from a Pennsylvania health care firm to the Manhattan branch of a

Swedish bank he explores how creative managers have turned local staff loose to craft inventive practices untethered from central rules and plain vanilla routines By holding their successes and failures up to the same analytical light he vividly reveals the key cornerstones of social organization on which motivating and effective decentralization depends Ultimately he brings order and evidence to the often strident debates about who has the power and on what scale to structure how we work and live locally Written for managers policy makers and reform activists *Organizing Locally* details the profound decentering of work and life inside firms unfolding across postindustrial societies Its fresh theoretical framework explains resurging faith in decentralized organizations and the ingredients that deliver vibrant meaning and efficacy for residents inside Ultimately it is a synthesizing study a courageous and radical new way of conceiving of American vitality creativity and ambition

Teaching and Learning at a Distance Michael Simonson, Susan M. Zvacek, Sharon Smaldino, 2019-07-01 *Teaching and Learning at a Distance* is written for introductory distance education courses for preservice or in service teachers and for training programs that discuss teaching distant learners or managing distance education systems This text provides readers with the basic information needed to be knowledgeable distance educators and leaders of distance education programs The teacher or trainer who uses this book will be able to distinguish between appropriate uses of distance education In this text we take the following themes The first theme is the definition of distance education Before we started writing the first edition of *Teaching and Learning at a Distance* we carefully reviewed the literature to determine the definition that would be at the foundation of our writing This definition is based on the work of Desmond Keegan but is unique to this book This definition of distance education has been adopted by the Association for Educational Communications and Technology and by the Encyclopedia Britannica The second theme of the book was the importance of research to the development of the contents of the book The best practices presented in *Teaching and Learning at a Distance* are validated by scientific evidence Certainly there are rules of thumb but we have always attempted to only include recommendations that can be supported by research The third theme of *Teaching and Learning at a Distance* is derived from Richard Clark's famous quote published in the *Review of Educational Research* that states that media are

mere vehicles that do not directly influence achievement Clark's controversial work is discussed in the book but is also fundamental to the book's advocacy for distance education in other words we authors did not make the claim that education delivered at a distance was inherently better than other ways people learn Distance delivered instruction is not a magical approach that makes learners achieve more The fourth theme of the book is equivalency theory Here we presented the concept that instruction should be provided to learners that is equivalent rather than identical to what might be delivered in a traditional environment Equivalency theory helps the instructional designer approach the development of instruction for each learner without attempting to duplicate what happens in a face to face classroom The final theme for Teaching and Learning at a Distance is the idea that the book should be comprehensive that it should cover as much of the various ways instruction is made available to distant learners as is possible It should be a single source of information about the field
