Hillman, 2015-02-27 The quest for benefit from existing wealth or by seeking privileged benefit through influence over policy is known as rent seeking. Much rent seeking activity involves government and political decisions and is therefore in the domain of political economy. **A Research Agenda for New Institutional Economics** Claude Ménard, Mary M. Shirley, 2018-12-28 Consisting of 30 concise chapters written by top scholars, this Research Agenda probes the knowledge frontiers of issues long at the forefront of New Institutional Economics (NIE), including government contracts and property rights. It examines pressing research questions surrounding norms, culture, and beliefs. It is designed to inform and inspire students and those starting their careers in economics, law, and political science. Well-established scholars will also find the book invaluable in updating their understanding of crucial research questions and seeking new areas to explore. **Applied Welfare Economics** Massimo Florio, 2014-02-05 What is the effect of a new infrastructure on the well-being of a local community? Is a tax reform desirable? Does the privatization of a telecommunication provider increase social welfare? To answer these questions, governments and their policy advisors should have in mind an operative definition of social welfare and cannot rely on simple official statistics such as GDP. The prices we observe are often misleading as welfare signals and costs and benefits for the society should be based on shadow prices revealing the social opportunity costs of goods and of changes of the world. This book explains how to apply these welfare economics ideas to the real world. After a theoretical discussion of the concept of social welfare, a critical analysis of the traditional doctrine of welfare economics embodied in the Two Fundamental Theorems and a presentation of social cost-benefit analysis, the book introduces the readers to an applied framework. This includes the empirical estimation of shadow prices of goods, the social cost of labour and capital, the assessment of risk. This book also includes the state of the art of international experience with CBA, including ex post evaluation of major projects, economic rates of return in different sectors, and a case study on privatisation is presented. This book offers a unique and original blend of theory, empirics, and experience. The theoretical discussion clarifies why shadow prices are not virtual market equilibrium prices as they arise as the solution of a planning problem often with governments and economic agents constrained in their information and powers. The empirical chapters show how to compute proxies of the shadow prices in simple ways. The experience chapters draw from first-hand research gained by the Author and his collaborators over many years of advisory work for the European Commission and other international and national institutions. *Equity in the Urban Built Environment* Bradley Bereitschaft, 2024-12-30 This book explores inequities in the urban built environment across a diverse range of places and considers practical solutions and strategies aimed at building more just, inclusive, and sustainable cities. Achieving more equitable and prosperous urban places requires a critical examination of the design and layout of our cities. The 16 chapters of this book illuminate the ways in which the built environment, including buildings, roads, public spaces, and other infrastructure, shapes our health and prosperity through a complex set of physical and social interactions. It brings together

experts from a variety of fields to identify and suggest workable solutions for inequities in the spatial distribution of amenities and disamenities and the processes and policies that give rise to these unjust patterns. Blending scholarly knowledge and practical experience, many of these strategies and solutions are presented through the lens of real world case studies. One key takeaway is that the planning of our cities should be a communal effort that properly reflects the needs of all residents. Equity in the built environment can only be realized when people of diverse backgrounds, ethnicities, ages, and abilities feel welcome to both shape and enjoy the shared public realm. This book is intended for a wide audience that primarily includes scholars, students, and professionals in the fields of urban geography, urban planning, landscape architecture, and urban studies. Professionals in urban planning and policy with a desire to advance equity goals will likely appreciate the strategies, recommendations, and best practices discussed within.
