Systems Biology Aleš Prokop, Béla Csukás, 2013-08-28 Growth in the pharmaceutical market has slowed down almost to a standstill

One reason is that governments and other payers are cutting costs in a faltering world economy But a more fundamental problem is the failure of major companies to discover develop and market new drugs Major drugs losing patent protection or being withdrawn from the market are simply not being replaced by new therapies the pharmaceutical market model is no longer functioning effectively and most pharmaceutical companies are failing to produce the innovation needed for success This multi authored new book looks at a vital strategy which can bring innovation to a market in need of new ideas and new products

Systems Biology SB Modeling is a significant task of systems biology SB aims to develop and use efficient algorithms data structures visualization and communication tools to orchestrate the integration of large quantities of biological data with the goal of computer modeling It involves the use of computer simulations of biological systems such as the networks of metabolites comprise signal transduction pathways and gene regulatory networks to both analyze and visualize the complex connections of these cellular processes SB involves a series of operational protocols used for performing research namely a cycle composed of theoretical analytic or computational modeling to propose specific testable hypotheses about a biological system experimental validation and then using the newly acquired quantitative description of cells or cell processes to refine the computational model or theory
