Microstructural Principles Of Food Processing And Engineering Food Engineering Series:

Microstructural Principles of Food Processing and Engineering José Miguel Aguilera, David W. Stanley, 1999-09-30
An Aspen Food Engineering Series Book This new edition provides a comprehensive reference on food microstructure emphasizing its interdisciplinary nature rooted in the scientific principles of food materials science and physical chemistry The book details the techniques available to study food microstructure examines the microstructure of basic food components and its relation to quality and explores how microstructure is affected by specific unit operations in food process engineering Descriptions of a number of food related applications provide a better understanding of the complexities of the microstructural approach to food processing Color plates Microstructural Principles of Food Processing & Engineering José Miguel Aguilera, David W. Stanley, 1990 *Handbook of Food Processing Equipment* George D. Saravacos, Athanasios E. Kostaropoulos, 2012-12-06 Recent publications in food engineering concern mainly food process engineering which is related to chemical engineering and deals primarily with unit operations and unit processes as applied to the wide variety of food processing operations Relatively less attention is paid to the design and operation of food processing equipment which is necessary to carry out all of the food processes in the food plant Significant technical advances on processing equipment have been made by the manufacturers as evidenced by the efficient modern food processing plants There is a need to relate advances in process engineering to process equipment and vice versa This book is an attempt to apply the established principles of transport phenomena and unit operations to the design selection and operation of food processing equipment Since food processing equipment is still designed empirically due to the complexity of the processes and the uncertainty of food properties description of some typical industrial units is necessary to understand the operating characteristics Approximate values and data are used for illustrative purposes since there is an understandable lack of published industrial data Pulsed Electric Fields Technology for the Food Industry Javier Raso-Pueyo, Volker Heinz, 2010-04-30 In an attempt to improve or replace existing food processing methods several novel technologies have been investigated Some of these emerging technologies have become alternative means of developing new foods or improving the safety and quality of existing ones while reducing energy consumption for the food industry Among all emerging nonthermal technologies high intensity pulsed electric fields PEF is one of the most appealing due to its short treatment times and reduced heating effects Its capability to enhance extraction processes and to inactivate microorganisms at temperatures that do not cause any deleterious effect on flavor color or nutrient value of foods opens interesting possibilities for the food processing industry Pulsed Electric Fields Technology for the Food Industry presents the information accumulated on PEF during the last 15 years by experienced microbiologists biochemists food technologists and electrical and food engineers It offers to anyone interested in this subject a comprehensive knowledge in this field **Electronic Irradiation of Foods** R. B. Miller, 2005-07-06 This book is devoted to an examination of the technologies and practical implementation techniques

associated with food irradiation using accelerator sources of ionizing radiation specifically electron beams and x rays

Introductory chapters summarize the effects of ionizing radiation on biological organisms and the organic compounds comprising foods and gives an overview of the food irradiation process Subsequent chapters cover the details of the electron beam and x ray energy deposition electron accelerator technologies beam scanning systems material handling systems shielding design and process control considerations Important appendices cover radiation dosimetry induced radioactivity and ozone generation

Instant Controlled Pressure Drop (D.I.C.) in Food Processing Tamara Allaf, Karim Allaf, 2013-10-24

The use of Instant Controlled Pressure Drop D I C in food processing operations is relatively new when compared with other conventional or innovative technologies In addition to existing applications such as drying texturing and decontamination D I C technology has been shown to be highly appropriate for an ever growing number of uses and with a wide range of raw materials Some examples are post harvesting and drying of fruits and vegetables cereal steaming extraction of essential oils and active molecules where D I C may be combined with supercritical fluids ultrasound or microwaves and the hydrolysis of cellulose and the transesterification of lipids This book presents a complete picture of current knowledge on the use of D I C in food processing preservation and extraction It provides a comprehensive compilation summarizing the fundamentals of D I C technology current developments new research findings safety precautions and environmental impacts It will also contribute to widening the scope of D I C technology through the inclusion of some much needed examples of industrial applications Each chapter of the book is complementary to the other chapters They all are based on presentations of reputed international researchers and address the latest progress in the field Professor Karim ALLAF heads a research team working on the intensification of eco processes at La Rochelle University He is a physicist and an expert in the thermodynamics of instantaneity Dr Tamara ALLAF is the R D manager of ABCAR DIC Process Company A chemical engineer she obtained her Ph D in innovative extraction processes
