The Role of Microbial Communities in Tropical Ecosystems Silvia Pajares,Brendan J.M. Bohannon,Valeria Souza,2017-01-13 Tropical ecosystems are different in important ways from those of temperate regions They are a major reservoir of plant and animal biodiversity and play important roles in global climate regulation and biogeochemical cycling They are also under great threat due to the conversion of tropical ecosystems to other uses Thus in the context of global change it is crucial to understand how environmental factors biogeographic patterns and land use changes interact to influence the structure and function of microbial communities in these ecosystems The contributions to this Research Topic showcase the current knowledge regarding microbial ecology in tropical ecosystems identify many challenges and questions that remain to be addressed and open up new horizons in our understanding of the environmental and anthropological factors controlling microbial communities in these important ecosystems

Mechanisms and New Targets for the Treatment of Chronic Pain Milica S. Prostran,Francisco R. Nieto,Sonja Maksim Vuckovic,2020-12-03 Acute pain has a physiological protective role

in preventing tissue damage However pain can become chronic due to a multitude of pathophysiological states such as trauma inflammation neural injury viral infection cancer autoimmune diseases and vascular and metabolic disorders These pathological states can trigger alterations of the pain pathways that can lead to hypersensitivity and in such circumstances pain loses its protective role and instead becomes persistent and debilitating affecting seriously to the quality of life of patients Chronic pain is one of the most important health problems worldwide It has been estimated that 10% of adults are diagnosed with chronic pain each year However despite the high prevalence of chronic pain its management is still no fully satisfactory probably due to the variety of chronic pain conditions with different etiologies neuropathic visceral and musculoskeletal pain and because their pathophysiological mechanisms are only partially known Therefore there is a huge need for new effective therapies for the control and or prevention of the different types of chronic pain Chronic pain is associated with plastic changes in pain circuits of the peripheral and central nervous system including changes in the expression of ion channels neurotransmitters and receptors In addition there is growing consensus on non neuronal mechanisms that can amplify or resolve chronic pain and cells traditionally thought to act just as coordinators of the inflammatory response such as immune and glial cells are now accepted as real modulators of pain signaling In this regard animal models of persistent pain such as models of neuropathic and visceral pain and models of arthritis are helping to elucidate our understanding of the pathogenesis of chronic pain and make it possible to test experimental treatments

Biological Nitrogen Fixation Frans J. de Bruijn, 2015-06-12 Nitrogen is arguably the most important nutrient required by plants However the availability of nitrogen is limited in many soils and although the earth's atmosphere consists of 78.1% nitrogen gas N_2 plants are unable to use this form of nitrogen To compensate modern agriculture has been highly reliant on industrial nitrogen fertilizers to achieve maximum crop productivity However a great deal of fossil fuel is required for the production and delivery of nitrogen fertilizer Moreover carbon dioxide CO_2 which is released during fossil fuel combustion contributes to the greenhouse effect and run off of nitrate leads to eutrophication of the waterways Biological nitrogen fixation is an alternative to nitrogen fertilizer It is carried out by prokaryotes using an enzyme complex called nitrogenase and results in atmospheric N_2 being reduced into a form of nitrogen diazotrophic organisms and plants are able to use ammonia It is this process and its major players which will be discussed in this book Biological Nitrogen Fixation is a comprehensive two volume work bringing together both review and original research articles on key topics in nitrogen fixation Chapters across both volumes emphasize molecular techniques and advanced biochemical analysis approaches applicable to various aspects of biological nitrogen fixation Volume 1 explores the chemistry and biochemistry of nitrogenases nif gene regulation the taxonomy evolution and genomics of nitrogen fixing organisms as well as their physiology and metabolism Volume 2 covers the symbiotic interaction of nitrogen fixing organisms with their host plants including nodulation and symbiotic nitrogen fixation plant and microbial omics cyanobacteria diazotrophs and non legumes

field studies and inoculum preparation as well as nitrogen fixation and cereals Covering the full breadth of current nitrogen fixation research and expanding it towards future advances in the field Biological Nitrogen Fixation will be a one stop reference for microbial ecologists and environmental microbiologists as well as plant and agricultural researchers working on crop sustainability

Handbuch der Haut- und Geschlechtskrankheiten Josef Jadassohn, 2013-12-01 Im Handbuch der Haut und Geschlechtskrankheiten von J. JADASSOHN wurden die Erbkrankheiten der Haut von H. W. SIEMENS abgehandelt Seit 1929 ist die Literatur auf diesem Gebiet gewaltig angewachsen jedoch im deutschen Schrifttum nie mehr zusammenfassend dargestellt worden Bei Planung des Gesamtwerkes war zunächst vorgesehen die Erbkrankheiten in einem Beitrag von etwa 28 Seiten abzuhandeln Der um die Erblichkeitspathologie verdiente H. W. SIEMENS hatte sich bereit erklärt diesen unter der Voraussetzung zu übernehmen da es gelänge einen Mitarbeiter zu finden der in der Lage wäre das gewaltige vornehmlich durch amerikanische Forschungsergebnisse angewachsene Wissen zu übersehen und zu bearbeiten Da dies mühsam wurde gerade auch im Hinblick auf die großen Fortschritte des Wissens um die Erblichkeitsforschungen in der Dermatologie von A. MARCHIONINI und H. A. GOTTRON im Jahre 1962 beschlossen einen ganzen Band der Erblichkeitsforschung zu widmen und U. W. SCHNYDER als Mitherausgeber heranzuziehen War es vor 35 Jahren noch möglich die Erbkrankheiten der Haut in einem einzigen Beitrag abzuhandeln so ergab sich nun die Notwendigkeit den Stoff in verschiedene Kapitel zu unterteilen Um Überschneidungen zu vermeiden wurde weitgehend darauf Rücksicht genommen da seltene Krankheitsbilder jeweils nur von einem und zwar demjenigen Autor abgehandelt wurden der diese aus eigener Anschauung kennt Diese Aufgliederung bedingt gelegentlich da solche seltenen Krankheitsbilder oder Syndrome nicht immer dort abgehandelt werden wo dies auf Grund der üblichen Einteilung vermutet werden könnte Im speziellen Teil werden eingangs Synonyma klinisches Bild und für die Erbbiologie wichtige Laboratoriumsbefunde lehrbuchmäßig aufgeführt
