T. Nguyen,2004 Determining the degree of stress in a weld caused by heat at various times in its history plays a significant role in evaluating residual stress and distortion and the microstructure modelling of welded joints and structures especially in components and structures of ships aircraft and bridges Nguyen based in Australia describes various analytical solutions for a number of stationary and moving heat sources in semi infinite body thick plate fillet joint cylinder sphere and cone and their application in weld pool simulation and other procedures He accomplishes this by superimposing principles for various parts of the proposed three dimensional heat sources with an assumption that only conduction is playing a major part in the thermal analysis of welds The US office of WIT Press is Computational Mechanics Annotation 2004 Book News Inc Portland OR booknews com     **Condensation Heat Transfer Enhancement** V. G. Rifert,Henry F. Smirnov,2004 In processes with condensation of steam to gas compositions or refrigerative agents an intensification of condensation is often required

because thermal resistance on the condensation side can be greater than the thermal resistance of the heat transfer wall on the cooling side In this work a pair of researchers from the National Technical U of Ukraine and the State Academy of Refrigeration Ukraine provide information about the enhancement of condensation including research results from the former USSR they feel deserves wider dissemination as well as discussion of different theoretical models of the condensation process The US office of WIT Press is Computational Mechanics Annotation 2004 Book News Inc Portland OR booknews com
