FMI 1. Piston cooling pressure is too low

Suitable action:

1

Re-check the piston cooling pressure. If measurement shows that the piston cooling pressure is correct, change the piston cooling pressure monitor.

Circuit description

A valve is installed in the oil filter bracket which opens or closes the oil supply for piston cooling, depending on oil pressure. If the oil pressure is below 240 kPa, the valve closes the oil supply for piston cooling.

The piston cooling pressure is monitored by a pressure monitor. The output signal from the pressure monitor, pin 1 to the engine control unit, can only have two distinct positions, on/off. The monitor is supplied with current from the engine control unit pin 10. A pre-set pressure limit of 150 kPa determines when the monitor switches on. The monitor opens if the pressure exceeds this value.

At idle, the monitor can be closed without a fault code being set.
