Machine Vision Fabio Solari, Manuela Chessa, Silvio P. Sabatini, 2012-03-23 Vision plays a fundamental role for living beings by allowing them to interact with the environment in an effective and efficient way The ultimate goal of Machine Vision is to endow artificial systems with adequate capabilities to cope with not a priori predetermined situations To this end we have to take into account the computing constraints of the hosting architectures and the specifications of the tasks to be accomplished to continuously adapt and optimize the visual processing techniques Nevertheless by exploiting the low cost computational power of off the shelf computing devices Machine Vision is not limited any more to industrial environments where situations and tasks are simplified and very specific

but it is now pervasive to support system solutions of everyday life problems
