**Von Open Access zu Open Science** Christian Heise, 2018-05-22 Mit der Digitalisierung geht der Ruf nach freiem Zugang zu wissenschaftlichen Forschungsergebnissen und einer Öffnung des Forschungsprozesses einher. Open Access und Open Science sind die Leitbegriffe dieses Transformationsprozesses, der von den einen euphorisch begrüßt und von den anderen heftig abgelehnt wird. Auf der Grundlage einer quantitativen Erhebung und eines reflexiven Experiments gibt das Buch Einblick in die aktuellen Debatten über die Chancen, aber auch Hindernisse der Öffnung der Wissenschaften.

Environmental Science James Dauray, M.Ed., 2013-11-07 Environmental science is an integrated interdisciplinary field that combines the study of ecology, physics, chemistry, biology, soil science, geology, atmospheric science, and geography. It is among the top 10 most popular Advanced Placement examinations taken by high school seniors in an effort to receive postsecondary college credit. *Idiot's Guide to Environmental Science* provides a step-by-step review of the disciplines that comprise environmental science, helping students grasp the basic concepts, internalize the information, and prepare for exams. Features include: The basics and history of the human relationship with the natural environment; The ways species grow, change, and interact; A detailed description of the earth's ecosystems, including deserts, grasslands, forests, and aquatic ecosystems; The effects of economics and agriculture on the environment; The various types of energy humans use, as well as how its production impacts the earth's ecosystems, with a focus on renewable energy sources; The ill effects of a growing population, including pollution, toxins, bacteria, waste, and global warming/climate change.

**Religion Vs. Science** Elaine Howard Ecklund, Christopher P. Scheitle, 2018 At the end of a five-year journey to find out what religious Americans think about science, Ecklund and Scheitle emerge with the real story of the relationship between science and religion in American culture. Based on the most comprehensive survey ever done representing a range of religious traditions and faith positions, *Religion vs. Science* is a story that is more nuanced and complex than the media and pundits would lead us to believe. The way religious Americans approach science is shaped by two fundamental questions: What does science mean for the existence and activity of God? What does science mean for the sacredness of humanity? How these questions play out as individual believers think about science both challenges stereotypes and highlights the real tensions between religion and science. Ecklund and Scheitle interrogate the widespread myths that religious people dislike science and scientists and deny scientific theories. *Religion vs. Science* is a definitive statement on a timely popular subject. Rather than a highly conceptual approach to historical debates, philosophies, or personal opinions, Ecklund and Scheitle give readers a facts-on-the-ground, empirical look at what religious Americans really understand and think about science.

**The Aesthetics of Scientific Experiments** Milena Ivanova, Alice Murphy, 2023-06-16 The relationship between aesthetics and science has begun to generate substantial interest. However, for the most part, the focus has been on the beauty of theories, and other aspects of scientific practice have been neglected. This book offers a novel perspective on aesthetics in experimentation via ten original essays from an

interdisciplinary group comprised of philosophers historians of science and art and artists The collection provides an analysis of the concept of beauty in the evaluation of experiments What properties do practising experimenters value How have the aesthetic properties of scientific experiments changed over the years Secondly the volume looks at the role that aesthetic factors including negative values such as ugliness as well as experiences of the sublime and the profound play in the construction of an experiment and its reception Thirdly the chapters provide in depth historical case studies from the Royal Society which also allows for a study of the depiction of scientific experiment in artworks as well as contemporary examples from the Large Hadron Collider and cases of experiments designed by artificial intelligence Finally it offers an exploration of the commonalities between how we learn from experiments on the one hand and the cognitive value of artworks on the other The Aesthetics of Scientific Experiments will be of interest to researchers and advanced students working in philosophy and history of science philosophy and history of art as well as practising scientists and science communicators Rethinking

Scientific Change and Theory Comparison: Léna Soler, H. Sankey, Paul Hoyningen-Huene, 2008-05-29 L NA SOLER This volume is a collection of essays devoted to the analysis of scientific change and stability It represents the most recent thinking on the topic of incommensurability and scientific theory change It explores the balance and tension that exists between commensurability and continuity or stabilities on the one hand and incommensurability and discontinuity or ruptures on the other And it discusses some central epistemological consequences regarding the nature of scientific progress rationality and realism With respect to these topics it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists The essays in this book are fully revised versions of papers which were originally presented at the international colloquium *Repenser l'évaluation comparative des théories scientifiques stabilité ruptures incommensurabilité* organized by Léna Soler and Paul Hoyningen-Huene at the University of Nancy France in June 2004 Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science historians of science and scientists who come from different traditions and endorse opposing commitments I hope that this is evident in the book too and that it will constitute one of its attractions **Handbook of Research on the Global View of**

**Open Access and Scholarly Communications** Alemneh, Daniel Gelaw, 2022-04-29 In an information and knowledge society access to information and knowledge is a basic human right making equitable and fair access to information and knowledge paramount Open Access OA plays a huge role in addressing inequities as well as broad based and inclusive scientific progress On the surface the number of publications discussing OA issues from various angles are on the rise However what is missing is a comprehensive assessment of the extent of OA implementation and a discussion of how to proceed in integrating OA issues from various perspectives The Handbook of Research on the Global View of Open Access and Scholarly

Communications articulates OA concepts and issues while demystifying the state of the art knowledge domain in the areas of OA and scholarly communications from diverse perspectives as well as implications for the information and knowledge society. Covering topics such as ethics, copyright challenges and open access initiatives, this book is a dynamic resource for publishers, librarians, higher education administrators, policymakers, students and educators of higher education, researchers and academicians.

**Theory vs Experiment** William Martin, 2025-02-26. Theory vs Experiment explores the dynamic interplay between theoretical frameworks and experimental findings in driving scientific progress. Rather than positioning them as opposing forces, the book argues that their mutual challenge, refinement and validation are essential for advancing knowledge. It is intriguing to learn that the prediction and subsequent discovery of the Higgs boson exemplifies theory motivating experiment. Conversely, unexpected experimental results such as the Michelson-Morley experiment have prompted significant theoretical revisions. The book begins by establishing key definitions and historical context, then examines specific case studies across physics, chemistry and biology. It emphasizes the importance of acknowledging inherent limitations and biases within both theoretical and experimental designs. This approach offers a balanced perspective on the scientific method and the nature of scientific truth. The book uniquely adopts a nuanced viewpoint, acknowledging the crucial roles of both theory and experiment while remaining accessible to a broad audience interested in science and philosophy. The book culminates in a discussion of the philosophical implications of this relationship, addressing the nature of scientific truth and the role of human interpretation. By drawing on historical sources, comparative analysis and meta-analysis, Theory vs Experiment provides a comprehensive and insightful examination of how theoretical breakthroughs and experimental findings shape our understanding of the universe, impacting STEM fields and beyond.

*Experiment and Exploration: Forms of World-Disclosure* Sönke Ahrens, 2014-03-18. This book deals with contemporary epistemological questions connecting Educational Philosophy with the field of Science and Technology Studies. It can be understood as a draft of a general theory of world disclosure, which is in its core a distinction between two forms of world disclosure: experiment and exploration. These two forms have never been clearly distinguished before. The focus lies on the experimental form of world disclosure, which is described in detail and in contrast to the explorational form along the line of twenty-one characteristics, which are mainly derived from empirical studies of experimental work in the field of natural sciences. It can also be understood as an attempt to integrate elements of the Anglo-Saxon Philosophy of Science with elements of the German tradition of Educational Philosophy. This is also reflected in the style of writing. In accordance to the content level of the book, the argument for experimental forms of world disclosure is written in an essayistic, readable style, which can be understood as an experimental form of writing. This book is a translation of the doctoral thesis *Experiment und Exploration: Bildung als experimentelle Form der Welterschließung* summa cum laude. The thesis was published in German in 2010 by Transcript Bielefeld in the series called *Theorie Bilden*, edited by Prof. Dr. Hannelore Faulstich Giel, Prof. Dr. Hans Christoph Koller, Prof. Dr. Karl Josef Pazzini.

*Marine Science* Great Britain: Parliament: House of Commons: Science and Technology Committee,2013-04-11 Properly managed Marine Conservation Zones will protect marine life the UK s coastal waters and ensure the fishing industry has a sustainable long term future The Government is currently letting the project flounder while sensitive environments are further degraded and the industry is subjected to further uncertainty It has been over three years since the Marine and Coastal Access Act was passed with cross party consensus that Marine Conservation Zones were necessary and has widespread public support Despite this the designation process has been repeatedly delayed and Marine Conservation Zones have become increasingly controversial 127 Marine Conservation Zones have been proposed but Defra has consulted on only 31 of these without setting out the zone selection process when these would be implemented or exactly how they would be managed The Committee welcomes the publication of the Marine Science Strategy and establishment of the Marine Science Coordination Committee However it notes concerns about the effectiveness of these measures and highlights the risk that changes to funding mechanisms could undermine support for long term strategic marine science It is also recognised that the Natural Environment Research Council is currently operating with inadequate resources but it should consider the impact that restructuring its research funding has had on its support for strategic marine science The Committee recommended there should be a duty on commercial operations to share the data they collect It is concerning that funding for important long term monitoring programmes remains opportunistic and piecemeal Developments in technologies such as autonomous underwater vehicles could dramatically alter the way in which marine data is collected
