Monoliths: A Guide to Building Reliable, Cloud-Native, Multi-Tenant Distributed Systems (Vol-II) 2025 Sumit Kumar Agrawal, Dr. Kamal Kant Verma, PREFACE In today's rapidly evolving digital landscape the shift from monolithic architectures to distributed systems has become a fundamental necessity for organizations aiming to scale their applications improve reliability and enhance flexibility As businesses grow so do the demands on their systems requiring a move toward cloud native multi tenant architectures that can handle large scale workloads while providing an optimal user experience across diverse customers and environments **Scaling Beyond Monoliths A Guide to Building Reliable Cloud Native Multi Tenant Distributed Systems** offers a comprehensive approach to transforming traditional monolithic applications into scalable resilient and cloud native distributed systems This book is designed for software engineers architects and technical leaders who seek to navigate the complexities of building and scaling multi tenant applications in modern cloud environments Through this guide we'll explore the essential principles and design patterns that enable the creation of robust distributed systems We'll dive into the challenges and best practices of designing for multi tenancy including tenant isolation data security and efficient resource management Moreover we'll explore the power of cloud native technologies such as containers microservices and orchestration platforms like Kubernetes to build scalable and fault tolerant architectures We'll also tackle real world scenarios addressing how to migrate from legacy monolithic systems and the strategic decisions necessary to ensure that your distributed system is optimized for both operational efficiency and customer satisfaction As the need for scalable resilient and cost effective systems continues to grow organizations must move beyond traditional monolithic designs Whether you're just starting your journey or seeking to refine your existing multi tenant architecture **Scaling Beyond Monoliths** will equip you with the knowledge to design and build systems that are not only scalable and reliable but also capable of driving innovation and growth in a cloud native world Authors **Practical Machine Learning:**

From Pictures to the Cloud 2025 AUTHOR:1-Praneet Amul Akash Cherukuri AUTHOR:2-Dr. Santosh Kumar Henge, PREFACE The past decade has moved machine learning from academic curiosity to an invisible utility pulsing through every photograph we snap and every swipe we make A face unlocks a phone a drone inspects a bridge a doctor consults an algorithm before a diagnosis all powered by models that see learn and act in real time Yet for students and engineers stepping into the field the journey from inquisitive Hello world notebook to a production grade model running on an edge

device or a cloud endpoint can feel disjointed and opaque Practical Machine Learning From Pictures to the Cloud was born of that gap In our classrooms and industry collaborations at S R University we watched learners master isolated concepts convolutional layers hyper parameter tuning REST APIs without a blueprint that tied them together This book offers that blueprint We start with raw pixels guide you through feature engineering and modern deep learning architectures and then scale the conversation outward how to train responsibly deploy at cloud scale monitor for drift and govern for fairness and privacy What makes the text practical is its bias toward end to end reproducibility Every chapter couple s theory with hands on labs drawn from real engagements in health care smart cities retail and autonomous systems Code examples ship as containerised notebooks pipeline diagrams map directly to the managed services of AWS Google Cloud Azure and open source stacks like Kubeflow and Feast Whether your workstation is a laptop or a GPU cluster you can follow the same lifecycle we use in production Equally vital is the ethical lens threaded throughout As image models grow more capable they also magnify risks bias surveillance ecological cost You will find checklists case studies and policy references alongside optimisation tricks because robustness and responsibility are no longer optional extras they are success criteria The book is organised in three movements 1 Seeing fundamentals of image data classical vision and modern convolutional transformer networks 2 Learning advanced training techniques transfer learning hyper parameter tuning and explainability 3 Serving scalable pipelines cloud deployment edge inference monitoring cost governance and compliance Our intended audience spans senior undergraduates graduate students and practitioners who know basic Python and linear algebra but want to take the leap into full stack machine learning engineering We owe gratitude to our students whose incisive questions shaped the narrative and to industry partners who opened their architectures for case studies Any errors that remain are ours alone We hope this book becomes your desk companion as you turn pixels into insights and models into value responsibly reproducibly and at scale Authors
