Video coding standards K.R. Rao, Do Nyeon Kim, Jae Jeong Hwang, 2013-10-07 The requirements for multimedia especially video and audio communications increase rapidly in the last two decades in broad areas such as television entertainment interactive services telecommunications conference medicine security business traffic defense and banking Video and audio coding standards play most important roles in multimedia communications In order to meet these requirements series of video and audio coding standards have been developed such as MPEG 2 MPEG 4 MPEG 21 for audio and video by ISO IEC H 26x for video and G 72x for audio by ITU T Video Coder 1 VC 1 for video by the Society of Motion Picture and Television Engineers SMPTE and RealVideo RV 9 for video by Real Networks AVS China is the abbreviation for Audio Video Coding Standard of China This new standard includes four main technical areas which are systems video audio and digital copyright management DRM and some supporting documents such as consistency verification. The second part of the standard known as AVS1 P2 Video Jizhun was approved as the national standard of China in 2006 and several final drafts of the standard have been completed including AVS1 P1 System Broadcast AVS1 P2 Video Zenggiang AVS1 P3 Audio Double track AVS1 P3 Audio 5 1 AVS1 P7 Mobile Video AVS S P2 Video and AVS S P3 Audio AVS China provides a technical solution for many applications such as digital broadcasting SDTV and HDTV high density storage media Internet streaming media and will be used in the domestic IPTV satellite and possibly the cable TV market Comparing with other coding standards such as H 264 AVC the advantages of AVS video standard include similar performance lower complexity lower implementation cost and licensing fees This standard has attracted great deal of attention from industries related to television multimedia communications and even chip manufacturing from around the world Also many well known companies have joined the AVS Group to be Full Members or Observing Members The 163 members of AVS Group include Texas Instruments TI Co Agilent Technologies Co Ltd Envivio Inc NDS Philips Research East Asia Aisino Corporation LG Alcatel Shanghai Bell Co Ltd Nokia China Investment NCIC Co Ltd Sony China Ltd and Toshiba China Co Ltd as well as some high level universities in China Thus there is a pressing need from the instructors students and engineers for a book dealing with the topic of AVS China and its performance comparisons with similar standards such as H 264 VC 1 and RV 9 Optimizing Generative AI Workloads for Sustainability Ishneet Kaur Dua, Parth Girish Patel, 2024-11-18 This comprehensive guide provides practical strategies for optimizing Generative AI systems to be more sustainable and responsible As advances in Generative AI such as large language models accelerate optimizing these resource intensive workloads for efficiency and alignment with human values grows increasingly urgent The book starts with the concept of Generative AI and its wide ranging applications while also delving into the environmental impact of AI workloads and the growing importance of adopting sustainable AI practices It then delves into the fundamentals of efficient AI workload management providing insights into understanding AI workload characteristics measuring performance and identifying bottlenecks and inefficiencies Hardware optimization strategies are

explored in detail covering the selection of energy efficient hardware leveraging specialized AI accelerators and optimizing hardware utilization and scheduling for sustainable operations You are also guided through software optimization techniques tailored for Generative AI including efficient model architecture compression and quantization methods and optimization of software libraries and frameworks Data management and preprocessing strategies are also addressed emphasizing efficient data storage cleaning preprocessing and augmentation techniques to enhance sustainability throughout the data life cycle The book further explores model training and inference optimization cloud and edge computing strategies for Generative AI energy efficient deployment and scaling techniques and sustainable AI life cycle management practices and concludes with real world case studies and best practices By the end of this book you will take away a toolkit of impactful steps you can implement to minimize the environmental harms and ethical risks of Generative AI For organizations deploying any type of generative model at scale this essential guide provides a blueprint for developing responsible AI systems that benefit society What You Will Learn Understand how Generative AI can be more energy efficient through improvements such as model compression efficient architecture hardware optimization and carbon footprint tracking Know the techniques to minimize data usage including evaluation filtering synthesis few shot learning and monitoring data demands over time Understand spanning efficiency data minimization and alignment for comprehensive responsibility Know the methods for detecting understanding and mitigating algorithmic biases ensuring diversity in data collection and monitoring model fairness Who This book Is For Professionals seeking to adopt responsible and sustainable practices in their Generative AI work leaders and practitioners who need actionable strategies and recommendations that can be implemented directly in real world systems and organizational workflows ML engineers and data scientists building and deploying Generative AI systems in industry settings and researchers developing new generative AI techniques such as at technology companies or universities
