Everyday billions of people wake up on planet Earth pick up their toothbrush use a kettle run through their smartphone sit in a train bus car and head for work college school They may use a desktop laptop tablet and return home at the end of the day Some may watch some television others just grab dinner and crash out only to repeat this cycle over and over day after day The routine gets so mechanical that only a tiny fraction ever wonder how the things they used during the day were conceived in the first place Very few of these billions realize that all the little conveniences they took for granted during the day are a result of eons of deep cognitive processes and scores of trial and error methods The masterminds behind these stunningly creative works have long remained as some far flung and unsung heroes but it is they who have made our lives as smooth as butter and as soft as velvet This book dives into the origin of all these little conveniences called Inventions the stories and

minds behind them Starting with the Stone Age and spanning numerous civilizations and countries the book looks into all the defining things that have been invented so far how they work and what could be invented in the future It also takes a peek into how Inventions have shaped the relationship between countries and civilizations how they rose and fell across various civilizations and why some countries have been consistently better at inventing than other countries The book aims to ignite the spark of curiosity among the readers at the same time helping the reader appreciate the ingenuity of these unsung heroes who lie forgotten on some dusty and nondescript shelves across various libraries Without them we would still be cavemen today living out our lives like hunter gatherers

Artificial Historians Marnie Hughes-Warrington, Anne Martin, Lewis Yarlupurka O'Brien, 2025-08-08 This book offers readers an introduction to the world of artificial histories and historians It looks behind the interfaces of AI and explores everyday platforms and prize winning history books to identify how people and algorithms make histories and how they might make histories in the future Every moment around the globe histories are made about ordinary people who use digital devices These histories are not made by professional historians or even by humans but by artificial intelligence that scours our digital footprints for patterns AI histories not only shape recommendations about what we might buy or stream but also our access to education healthcare and justice The outcomes of recommendation systems are not just a technology problem or an ethics problem This book argues that this is also a history problem and it needs to be understood as one if we are to make fairer or more just systems It shows us that the deep history of history making including Australian Aboriginal and First Nations histories can help us to navigate the future of history in AI Presenting readers with a range of familiar and accessible examples Artificial Historians is a valuable resource for students scholars and all those interested in global historiography technology and artificial intelligence
