Written by an architect with more than thirty three years of experience as a master planner and programmer of laboratories and clinical facilities this book demystifies the process of laboratory planning and design. It provides a comprehensive overview of the fundamental issues related to laboratory design and offers readers detailed step by step guidance through the complex maze of design specifications and codes standards and official guidelines that must be addressed during the programming planning design and construction process. Focusing mainly on laboratory programming planning and design criteria for wet laboratory environments Leonard Mayer provides examples from numerous master plans facility programs functional programs and requirements programs applicable to a wide variety of scientific and medical disciplines and related facilities. Related functions and activities include administrative offices computer centers core service and support building services facilities and more. He presents new and updated design criteria based on recent laws and regulations and supplies readers with comprehensive lists of relevant codes regulations standards guidelines and architectural structural mechanical electrical and plumbing criteria. Design and Planning of Research and Clinical Laboratory Facilities is an excellent primer for architecture students and newcomers to the field as well as an indispensable single volume reference for experienced professionals. It is also an invaluable resource for researchers and investigators facility planners and managers plant engineers and all others involved with the design construction maintenance and administration of laboratory facilities.
