Color Space and Its Divisions Rolf G. Kuehni,2003-04-28 It has been postulated that humans can differentiate between millions of gradations in color Not surprisingly no completely adequate detailed catalog of colors has yet been devised however the quest to understand record and depict color is as old as the quest to understand the fundamentals of the physical world and

the nature of human consciousness Rolf Kuehni's *Color Space and Its Divisions: Color Order from Antiquity to the Present* represents an ambitious and unprecedented history of man's inquiry into color order focusing on the practical applications of the most contemporary developments in the field. Kuehni devotes much of his study to geometric three-dimensional arrangements of color experiences, a type of system developed only in the mid-nineteenth century. Color spaces are of particular interest for color quality control purposes in the manufacturing and graphics industries. The author analyzes three major color order systems in detail: Munsell, OSA, UCS, and NCS. He presents historical and current information on color space developments in color vision, psychology, psychophysics, and color technology. Chapter topics include: A historical account of color order systems; Fundamentals of psychophysics and the relationship between stimuli and experience; Results of perceptual scaling of colors according to attributes; History of the development of mathematical color space and difference formulas; Analysis of the agreements and discrepancies in psychophysical data describing color differences; An experimental plan for the reliable replicated perceptual data necessary to make progress in the field; Experts in academia and industry, neuroscientists, designers, art historians, and anyone interested in the nature of color will find *Color Space and Its Divisions* to be the authoritative reference in its field.

Colour Design Janet Best, 2017-06-08 *Colour Design: Theories and Applications* Second Edition provides information on a broad spectrum of colour subjects written by seasoned industry professionals and academics. It is a multidisciplinary book that addresses the use of colour across a range of industries with a particular focus on textile colouration. Part One deals with the human visual system, colour perception, and colour psychology, while Part Two focuses on the practical application of colour in design, including specifically in textiles and fashion. Part Three covers cultural and historical aspects of colour, as well as recent developments addressing areas such as dyes and pigments, architecture, colour theory, virtual reality, games, colour printing, website development, and sustainability. This revised, expanded, and updated edition reflects recent technological developments and new industry priorities. Bringing together the science of colouration and the more artistic elements of design, this book supports students, academics, and industry professionals in developing a deep knowledge of colour use. It will also be an important reference for those involved in textile dyeing, design, and manufacture. Provides a comprehensive review of the issues surrounding the use of color in textiles. Discusses the application of color across a wide range of industries, supporting interdisciplinary knowledge and research. Offers a revised, expanded, and updated look that reflects the rise of new technology and industry priorities.
