Principles of Lasers

Orazio Svelto, 2009-09-29 This book is motivated by the very favorable reception given to the previous editions as well as by the considerable range of new developments in the laser field since the

publication of the third edition in 1989 These new developments include among others quantum well and multiple quantum well lasers diode pumped solid state lasers new concepts for both stable and unstable resonators femtosecond lasers ultra high brightness lasers etc This edition thus represents a radically revised version of the preceding edition amounting essentially to a new book in its own right However the basic aim has remained the same namely to provide a broad and unified description of laser behavior at the simplest level which is compatible with a correct physical understanding The book is therefore intended as a textbook for a senior level or first year graduate course and or as a reference book The most relevant additions or changes to this edition can be summarized as follows 1 A much more detailed description of Amplified Spontaneous Emission has been given Chapter 2 and a novel simplified treatment of this phenomenon both for homogeneous and inhomogeneous lines has been introduced Appendix C 2 A major fraction of a new chapter Chapter 3 is dedicated to the interaction of radiation with semiconductor media either in a bulk form or in a quantum confined structure quantum well quantum wire and quantum dot 3 **A-level Physics** Roger Muncaster, 1993 This extensively revised 4th edition of an established physics text offers coverage of the recent developments at A AS Level with each topic explained in straightforward terms starting at an appropriate Level 7 8 of the National Curriculum **Resources in Education** , 2001-10

Introduction to Laser Technology C. Breck Hitz, James J.
