

FIRE SUPPRESSION SYSTEM -NOVEC 1230

Introduction to NOVEC-1230

NOVEC 1230 is the next generation of chemical fire suppressant in place of FM200 which was a market leader for the exchange of Halon 1301. These systems are designed to extinguish fires involving flammable liquids, gases and electrical equipment therefore protecting hazards particularly in applications where high margins of safety and long-term sustainability are considered important. NOVEC 1230 is a colourless and low odour fluid with a density around 11 times greater than air. Systems are designed to hold the NOVEC 1230 in the form of a liquid and nitrogen which is used to super-pressurise the container to 24.8 bar (360 psi) at 20°C.

NOVEC 1230 contains no bromine or chlorine and therefore has an ozone depleting potential of zero. The atmospheric lifetime of NOVEC 1230 fluid is estimated to be in the range of 3-5days and with a global warming potential of 1, it is considered that NOVEC 1230 fluid has no measurable impact on climate change. These attributes ensure that NOVEC 1230 fluid represents a truly sustainable technology.

How does an NOVEC-1230 flooding system work?

When the system is activated the contents flow into the distribution pipework to the discharge nozzle(s) where it is rapidly dispersed as a vapour (less than 10 seconds). During the discharge the enclosure will be fogged which may reduce visibility. This normally clears rapidly and should not obstruct the ability of personnel to safely exit the protected area. Like most other chemical agents, it rapidly extinguishes through a combination of heat absorption (its main action) and some chemical interference with the flame. It does not significantly deplete the oxygen content in the room and tests have shown it to be less toxic than Halon 1301.

Benefits of this system:
