Nuclear Changes: Fission, Fusion, and Radioactive Decay

Nuclear changes involve transformations in the nucleus of an atom, which can release and absorb energy. There are three main types of nuclear changes: fusion, fission, and radioactive decay. Fusion occurs when a heavy atomic nucleus splits into two smaller nuclei, releasing energy and particles. This process is used in nuclear reactors to generate electricity and can also happen in stars. Fission is the opposite of fusion; it occurs when a heavy atomic nucleus splits into two smaller nuclei, releasing energy and particles. Fusion powers the Sun and other stars, where extreme temperatures and pressure allow hydrogen atoms to fuse, producing helium and energy that reaches Earth as sunlight. Radioactive decay is the spontaneous breakdown of unstable atomic nuclei, emitting particles or energy in the form of radiation. This process happens naturally in some elements and contributes to the heat inside Earth and other background radiation we encounter daily.

Students are taught how to understand these nuclear changes. For example, fusion can be illustrated as two single balls spinning into one smaller ball, absorbing energy and releasing energy. Fusion can be shown as two small balls merging into a bigger ball, releasing energy. Radioactive decay might be shown as a ball that suddenly releases a smaller piece or a particle. These simple pictures help students see how nuclear changes and energy are connected, although these models are simplified and do not include the complex considerations behind nuclear physics. They convey the important concepts clearly to students.

The energy released from fusion is much greater than that from fission, which is why the Sun shines so brightly. On Earth, scientists focus on fusion because it would provide a cleaner and more powerful energy source. Understanding these nuclear processes helps us see how the universe works and how humans can harness energy in different ways for various needs.

24. Mark the best answer.

1. What happens during fusion?
