Nuclear Magnetic Resonance Spectroscopy An Introduction To Principles Applications And Experimental Methods:

Nuclear Magnetic Resonance Spectroscopy Joseph B. Lambert, Eugene P. Mazzola, 2004 This book offers complete coverage of classic one dimensional NMR as well as up to date coverage of two dimensional NMR and other modern methods This book focuses on all aspects of NMR including classic methods modern techniques practical advice for execution of the NMR experiment theory and more For practicing NMR spectroscopists who want a better understanding of their subject professors who want a wider knowledge of NMR preparative synthetic organic chemists in industry who want to have more information about how to prove the structures of the compounds they make and analytical chemists in industry who actually carry out the experiments and want a better understanding of what they are doing **CRC Handbook of Basic Tables for Chemical Analysis** Thomas J. Bruno, Paris D.N. Svoronos, 2020-07-30 Researchers in chemistry chemical engineering pharmaceutical science forensics and environmental science make routine use of chemical analysis but the information these researchers need is often scattered in different sources and difficult to access The CRC Handbook of Basic Tables for Chemical Analysis Data Driven Methods and Interpretation Fourth Edition is a one stop reference that presents updated data in a handy format specifically designed for use when reaching a decision point in designing an analysis or interpreting results This new edition offers expanded coverage of calibration and uncertainty and continues to include the critical information scientists rely on to perform accurate analysis Enhancements to the Fourth Edition Compiles a huge array of useful and important data into a single convenient source Explanatory text provides context for data and guidelines on applications Coalesces information from several different fields Provides information on the most useful wet chemistry methods as well as instrumental techniques with an expanded discussion of laboratory safety Contains information of historical importance necessary to interpret the literature and understand current methodology Unmatched in its coverage of the range of information scientists need in the lab this resource will be referred to again and again by practitioners who need quick easy access to the data that forms the basis for experimentation and analysis [CRC Handbook of Chemistry and Physics](#) William M. Haynes, 2016-04-19 Mirroring the growth and direction of science for a century the Handbook now in its 93rd edition continues to be the most accessed and respected scientific reference in the world An authoritative resource consisting tables of data its usefulness spans every discipline This edition includes 17 new tables in the Analytical Chemistry section a major update of the CODATA Recommended Values of the Fundamental Physical Constants and updates to many other tables The book puts physical formulas and mathematical tables used in labs every day within easy reach The 93rd edition is the first edition to be available as an eBook *Nuclear Magnetic Resonance Spectroscopy* Frank A. Bovey, Peter A. Mirau, H. S. Gutowsky, 1988-11-01 Nuclear Magnetic Resonance Spectroscopy Second Edition focuses on two dimensional nuclear magnetic resonance NMR spectroscopy high resolution NMR of solids water suppression multiple quantum spectroscopy and

NMR imaging The selection first takes a look at the fundamental principles and experimental methods Discussions focus on the NMR phenomenon dipolar broadening and spin spin relaxation nuclear electric quadrupole relaxation saturation magnetic shielding and chemical shift magnetic field transitions between the nuclear energy levels and resolution and sensitivity considerations The manuscript then ponders on chemical shift coupling of nuclear spins and nuclear relaxation and chemical rate processes Topics include spin lattice relaxation spin spin relaxation spin decoupling and associated techniques and description and analysis of spin systems The text examines two dimensional NMR spectroscopy macromolecules and NMR of solids including magic angle spinning cross polarization proton dipolar broadening biopolymers and chain motion in macromolecules The selection is a valuable source of data for readers interested in nuclear magnetic resonance spectroscopy
