Nucleic Acids Structures Properties And Functions:

Nucleic Acid Structure and Recognition Stephen Neidle, 2002 This book provides a detailed view of the molecular structures of DNA and RNA and how they are recognised by small molecules and proteins Extensive source material is provided including information on relevant web sites and computer programmes The major methods of structural investigation for nucleic acids X ray crystallography NMR and molecular modelling are reviewed and their scope and limitations in the context of nucleic acids discussed Also covered are the conformational features of nucleic acid building blocks including a description of how base pair morphologies are analysed the structures of DNA double helices and helical oligonucleotides emphasising current ideas on sequence dependent structure and DNA DNA interactions including triplexes and quadruplexes The principles of RNA folding ribosome and ribozyme structure are also surveyed Both covalent and non covalent nucleic acid interactions with small molecules are described with the emphasis on recognition principles and sequence specific gene recognition The principles of protein nucleic acid are covered focussing on regulatory proteins *Nucleic Acid Structure and Recognition* will therefore equip readers with a good understanding of all the important aspects of this major field The Nucleic Acid Database NDB crystallographic and NMR structures for the nucleic acid structures described in the book are freely available through the Nucleic Acid Structure and Recognition website

Nucleic Acids Victor A. Bloomfield, Donald M. Crothers, Ignacio Tinoco, 2000-04-17 Providing a comprehensive account of the structures and physical chemistry properties of nucleic acids with special emphasis on biological function this text has been organized to meet the needs of those who have only a basic understanding of physical chemistry and molecular biology

Nucleic Acids: Structures, Properties and Functions Becky Orton, 2022-09-13 Nucleic acids are biopolymers or large biomolecules composed of organic molecules called nucleotides They are essential to all known forms of life Deoxyribonucleic acid DNA and ribonucleic acid RNA are the two main classes of nucleic acids If the sugar is ribose the polymer is RNA In case the sugar is the ribose derivative deoxyribose then the polymer is DNA Nucleic acids are naturally occurring chemical compounds that act as the primary information carrying molecules in cells and make up the genetic material The information of every living cell of every life form on Earth is created encoded and stored by nucleic acids In turn they function to transfer and convey that information inside and outside the cell nucleus to the internal operations of the cell and ultimately to the next generation of each living organism This book unravels the recent studies in the field of nucleic acids It presents researches and studies performed by experts across the globe Researchers and students in this field will be assisted by this book

Informational Biopolymers of Genes and Gene Expression R.D. Blake, 2005-03-23 This new text examines the biophysics and biochemistry of nucleic acids and proteins carving out the dynamic interface between chemistry and molecular biology and providing a detailed picture of nucleic acids and proteins their structures biological properties and origins and evolution

Biochemistry, International Adaptation Donald Voet, Judith G. Voet, 2021 The Gold Standard in

Biochemistry text books Biochemistry 4e is a modern classic that has been thoroughly revised Don and Judy Voet explain biochemical concepts while offering a unified presentation of life and its variation through evolution It incorporates both classical and current research to illustrate the historical source of much of our biochemical knowledge *Nucleic Acid Structure* Stephen Neidle,1987 Subject Index of Current Research Grants and Contracts Administered by the National Institute of General Medical Sciences National Institute of General Medical Sciences (U.S.),1975 Research Awards Index , **Research Grants Index** National Institutes of Health (U.S.). Tymoczko,Lubert Stryer,2002-02-15 This book is an outgrowth of my teaching of biochemistry to undergraduates graduate students and medical students at Yale and Stanford My aim is to provide an introduction to the principles of biochemistry that gives the reader a command of its concepts and language I also seek to give an appreciation of the process of discovery in biochemistry **Nucleic Acids** ,1965 **Computational Approaches to Predicting Protein Function from Structure** Eric W. background and documentation for this component The second component the analysis of functional properties is given broader consideration Chapters 1 2 5 and 9 but the main emphasis has been the step by step development of the structure function models It is hoped that this approach will clearly illustrate the typical progression of scientific model building from the first clear definition of the problem and the statement of the hypothesis through ever increasing refinements of experimental tests toward the final answer It is also hoped that the statements of philosophy principles and scientific method that are the bases for this approach are of broad enough validity to survive even after its models have become obsolete With this approach it is essential to inform the reader in unequivocal terms that this book is not a summary of final conclusions and complete stories which can be submitted to memory Each system discussed should be considered very critically and the models should be evaluated in terms of the available evidence The only facts are the experimental data the interpretation of this data into models is only convincing to the extent that it makes logical sense to the individual examining it Since both space and common sense prohibits a continuous reiteration of this statement throughout the book be prepared to encounter some models and hypotheses which are based on sound experimental evidence as well as some which have no experimental basis at all In neither case are they facts but in either case they represent ideas which can be subjected to further experimental tests If the book helps to sharpen this critical evaluation of both ideas and the experimental test of the hypotheses one of its major purposes has been fulfilled
