Java In Action: An Excellent Guide to Explore JDBC And Database Applications Vivian Siahaan, Rismon Hasiholan Sianipar, 2019-11-27 This step-by-step guide to explore database programming using Java is ideal for people with little or no programming experience. The goal of this concise book is not just to teach you Java but to help you think like a programmer. Each brief chapter covers the material for one week of a college course to help you practice what you've learned. As you would expect, this book shows how to build from scratch two different databases: PostgreSQL and SQLite using Java. In designing a GUI and as an IDE, you will make use of the NetBeans tool. In the first chapter, you will learn how to install NetBeans, JDK 11, and the PostgreSQL connector. How to integrate external libraries into projects. How the basic PostgreSQL commands are used. How to query statements to create databases, create tables, fill tables, and manipulate table contents is done. In the first chapter, you will learn how to install NetBeans, JDK 11, and the PostgreSQL connector. How to integrate external libraries into projects. How the basic PostgreSQL commands are used. How to query statements to create databases, create tables, fill tables, and manipulate table contents is done. In the second chapter, you will learn querying data from the PostgreSQL using JDBC, including establishing a database connection, creating a statement object, executing the query, processing the resultset object, querying data using a statement that returns multiple rows, querying data using a statement that has parameters, inserting data into a table using JDBC, updating data in PostgreSQL database using JDBC, calling PostgreSQL stored function using JDBC, deleting data from a PostgreSQL table using JDBC, and PostgreSQL JDBC transaction. In chapter three, you will create a PostgreSQL database named School and its tables. In chapter four, you will study creating the initial three table projects in the school database: Teacher table, TClass table, and Subject table. Creating database configuration files.

Creating a Java GUI for viewing and navigating the contents of each table
Creating a Java GUI for inserting and editing tables
Creating a Java GUI to join and query the three tables
In chapter five you will learn
Creating the main form to connect all forms
Creating a project will add three more tables to the school database the Student table the Parent table and Tuition table
Creating a Java GUI to view and navigate the contents of each table
Creating a Java GUI for editing inserting and deleting records in each table
Creating a Java GUI to join and query the three tables and all six
In chapter six you will study how to query the six tables
In chapter seven you will be shown how to create SQLite database and tables with Java
In chapter eight you will be taught how to extract image features utilizing BufferedImage class in Java
GUI
Digital image techniques to extract image features used in this chapter are grayscale sharpening inverting blurring dilation erosion closing opening vertical prewitt horizontal prewitt Laplacian horizontal sobel and vertical sobel
For readers you can develop it to store other advanced image features based on descriptors such as SIFT and others for developing descriptor based matching
In chapter nine you will be taught to create Java GUI to view edit insert and delete Suspect table data
This table has eleven columns suspect_id primary key suspect_name birth_date case_date report_date suspect_status arrest_date mother_name address telephone and photo
In chapter ten you will be taught to create Java GUI to view edit insert and delete Feature_Extraction table data
This table has eight columns feature_id primary key suspect_id foreign key feature1 feature2 feature3 feature4 feature5 and feature6
All six fields except keys will have a BLOB data type so that the image of the feature will be directly saved into this table
In chapter eleven you will add two tables Police_Station and Investigator
These two tables will later be joined to Suspect table through another table File_Case which will be built in the seventh chapter
The Police_Station has six columns police_station_id primary key location city province telephone and photo
The Investigator has eight columns investigator_id primary key investigator_name rank birth_date gender address telephone and photo
Here you will design a Java GUI to display edit fill and delete data in both tables
In chapter twelve you will add two tables Victim and Case_File
The File_Case table will connect four other tables Suspect Police_Station Investigator and Victim
The Victim table has nine columns victim_id primary key victim_name crime_type birth_date crime_date gender address telephone and photo
The Case_File has seven columns case_file_id primary key suspect_id foreign key police_station_id foreign key investigator_id foreign key victim_id foreign key status and description
Here you will also design a Java GUI to display edit fill and delete data in both tables
