Top Secret Sudoku System Stephen Kerr, 2007-06-18 What if you could solve any Sudoku puzzle with a bare minimum of penciling in and erasing usually one or two penciled in numbers per cell and never more than three no educated guesses and do it in less than half the time it takes you to solve a puzzle now Well we have developed an incredibly simple yet amazingly powerful system which limits the confusion of having four five or more contingencies penciled in for each cell and can solve almost any Sudoku puzzle This is not to say that we have taken the logic or the challenge out of solving Sudoku puzzles we have not You must still be thoughtful thorough and sometimes imaginative but you will have much MORE FUN solving them with much less tedium and frustration

Research and Development in Intelligent Systems XXIV Max Bramer, Frans Coenen, Miltos Petridis, 2007-12-03 An agent in a multi agent system MAS has to generate plans for its individual goal but these plans may conflict with those that are already being scheduled or executed by other agents It must also be able to complete its planning and resolution of these conflicts within a reasonable time to have an acceptable quality plan Although we adopt hierarchical planning HP for example see 7.12 using the decision theoretic planning DTP approach 6 for efficient planning it is not trivial to apply HPO to MAS In HP appropriate abstract plans are selected level by level to maximize the utility U_p where p is the expected plan comprising a sequence of primitive actions However in the MAS context conflicts between agents affect the efficiency and quality of resulting plans When a conflict is found at lower levels an additional sophisticated process for avoiding it conflict resolution must be invoked and some extra actions such as waiting for synchronization and detouring may have to be added to the plan The conflict resolution process may

become costly or fail Even a single conflict if it is difficult to resolve will result in a plan with considerably lower quality than it otherwise would have As a result in multi agent systems the second or third best plans may result in better overall performance

Game Analytics Magy Seif El-Nasr, Anders Drachen, Alessandro Canossa, 2013-03-30. Developing a successful game in today's market is a challenging endeavor. Thousands of titles are published yearly, all competing for players' time and attention. Game analytics has emerged in the past few years as one of the main resources for ensuring game quality, maximizing success, understanding player behavior, and enhancing the quality of the player experience. It has led to a paradigm shift in the development and design strategies of digital games, bringing data-driven intelligence practices into the fray for informing decision making at operational, tactical, and strategic levels. **Game Analytics: Maximizing the Value of Player Data** is the first book on the topic of game analytics, the process of discovering and communicating patterns in data towards evaluating and driving action, improving performance, and solving problems in game development and game research. Written by over 50 international experts from industry and research, it covers a comprehensive range of topics across more than 30 chapters, providing an in-depth discussion of game analytics and its practical applications. Topics covered include monetization strategies, design of telemetry systems, analytics for iterative production, game data mining, and big data in game development, spatial analytics, visualization, and reporting of analysis, player behavior analysis, quantitative user testing, and game user research. This state-of-the-art volume is an essential source of reference for game developers and researchers. Key takeaways include: Thorough introduction to game analytics, covering analytics applied to data on players, processes, and performance throughout the game lifecycle; In-depth coverage and advice on setting up analytics systems and developing good practices for integrating analytics in game development and management; Contributions by leading researchers and experienced professionals from the industry, including Ubisoft, Sony, EA, BioWare, Square Enix, THQ, Volition, and PlayableGames; Interviews with experienced industry professionals on how they use analytics to create hit games.
