Climate Vulnerability, Volume 1 ,2013-06-14 Climate Vulnerability Volume 1 Climate Change and Social Justice

Jeremy Moss,2009-06-16 The impacts of climate change can already be felt in society and on the Earth itself As new evidence of the environmental impact of climate change is constantly emerging we are forced to confront the significance of our political decisions about who will pay the price of responding to a changing climate In the rush to avoid or reduce the repercussions of climate change we need to ensure that the burden is evenly distributed or run the risk of creating injustice Climate Change and Social Justice demonstrates that the problem of how to distribute the costs of climate change is fundamentally a problem of justice If we ignore the concerns addressed this book the additional burdens of climate change will fall on the poor and vulnerable Jeremy Moss brings together today s key thinkers in climate research including Peter Singer Ross Garnaut and David Karoly to respond to these important issues **Hippocrasy** Rachelle Buchbinder,Ian Harris,2021-10-01 Two world leading doctors reveal the true state of modern medicine and how doctors are letting their patients down In Hippocrasy rheumatologist and epidemiologist Rachelle Buchbinder and orthopaedic surgeon Ian Harris argue that the benefits of medical treatments are often wildly overstated and the harms understated That overtreatment and overdiagnosis are rife And the medical system is not fit for purpose designed to deliver health care not health This powerful expos reveals the tests drugs and treatments that provide little or no benefit for patients and the inherent problem of a medical system based on treating rather than preventing illness The book also provides tips to empower patients do I really need this treatment What are the risks Are there simpler safer options What happens if I do nothing Plus solutions to help restructure how medicine is delivered to help doctors live up to their Hippocratic Oath One of the hardest things for a doctor to do is nothing This superb book explains how in medicine and surgery less is often not just more it s closer to the oath we re all supposed to practise by Norman Swan award winning producer and broadcaster of the Health Report and Coronacast This eye opening and enthralling book on the medical and moral hazards which beset the health profession is a must read for patients and practitioners alike From tooth fairy science to medical disasters to the inflated business world of medicine Hippocrasy is a profoundly thought provoking and compelling work that challenges our perception of the practice of modern medicine Kate McClymont AM award winning investigative journalist for the Sydney Morning Herald The Age Doctors are educated to do good Yet as the commercial imperatives of the medical industrial complex tighten their grip doctors are becoming more and more worried that they are inflicting harm rather than creating benefit This book is for them and perhaps even more importantly for their patients The road to hell is paved with good intentions read Hippocrasy and turn back Iona Heath CBE former President The Royal College of General Practitioners This brilliant book offers clear and compelling evidence that we re all at risk from too much medicine Using the best of science these two respected doctors blow the whistle on harmful healthcare Buchbinder and Harris reveal how overdiagnosis overtreatment and the

medicalisation of normal life are major threats to human health But this brilliant book also brings hope that we can wind back the harm and waste of unnecessary tests and treatments and focus more on the great benefits medicine has to offer Ray Moynihan author of Too Much Medicine and Selling Sickness Assistant Professor Bond University About half of us in advantaged countries are now patients or providers or both and a third of clinical interventions are futile at best Seeking health is daunting and we could benefit from a guide Rachelle Buchbinder and Ian Harris have provided such with this volume Nortin M Hadler author of The Last Well Person The Citizen Patient and Worried Sick Emeritus Professor of Medicine and Microbiology Immunology University of North Carolina Throughout medical history doctors have routinely ignored the fundamental Hippocratic injunction First do no harm Most of their treatments produced lots of harms with little or no benefit This wonderful book punctures the hyped claims of modern medicine showing that it is not nearly as scientific safe effective and honest as it should be Reading Hippocrisy is essential for doctors to help make them become more cautious but even more essential for patients to help them become more self protective Allen Frances author of Saving Normal Professor and Chairman Emeritus of the Department of Psychiatry and Behavioral Sciences Duke University School of Medicine A timely book from two leading doctors They present evidence that despite medicine s lip service to evidence based medicine many unnecessary wasteful and harmful investigations and treatments abound Increasingly the healthy are re defined as having predisease and drawn into questionable investigations and monitoring programmes The book s core message is that medicine s hubris and a creeping scientism has come to overshadow the doctor s commitment to care for and comfort their patients and above all do no harm It is time to step back from the brink and revisit the founding principles and core values of our profession Trish Greenhalgh OBE Professor of Primary Care Research University of Oxford

Gender and Climate

Change Joane Nagel,2015-09-25 Does gender matter in global climate change This timely and provocative book takes readers on a guided tour of basic climate science then holds up a gender lens to find out what has been overlooked in popular discussion research and policy debates We see that around the world more women than men die in climate related natural disasters the history of science and war are intimately interwoven masculine occupations and preoccupations and conservative men and their interests drive the climate change denial machine We also see that climate policymakers who embrace big science approaches and solutions to climate change are predominantly male with an ideology of perpetual economic growth and an agenda that marginalizes the interests of women and developing economies The book uses vivid case studies to highlight the sometimes surprising differential gendered impacts of climate changes

Change and

Reform in Medicine and Health Education in China - A Teaching Staffs Perspective Xiangyun Du, Jiannong

Shi, Yuhong Zhao,2022-09-01 In recent decades medicine and health education has been challenged worldwide by changes in its profession Being a doctor nowadays encompasses much more than having biomedical knowledge and includes interdisciplinary skills related to societal needs communication skills and ethical consideration among other things In order

to provide these skills and competences many medical schools are implementing changes in different aspects of the education. These changes are also occurring in China. In the past twenty years medical education in China has initiated a series of reforms. The current reforms have mainly been led by the Ministry of Education and Ministry of Health. These initial actions have evidenced both positive and negative attitudes and reactions. Is there a need to make further reforms and changes? If so, in what aspects? This book documents a national investigation of attitudes from teaching staff on the reforms and changes. Nearly 1800 teaching staff from 23 medical universities participated in this investigation. The results suggest that sustainable educational change demands not only supports from policy makers and leaderships but also active participation from teaching staff. In order for the implementation of reforms and changes to be successful, two factors are essential from the teaching staff's perspective. First, it is important for teaching staff to gain a deep understanding of educational reform and change, and second, they should develop appropriate skills to be able to conduct the reforms through their teaching practice. To provide these two factors, institutional facilitation is necessary and crucial.

Insight Turkey / Winter 2022 - Climate Change And Migration, 2022-03-30

Climate change and migration are two major phenomena that are constantly altering our planet and need a broad perspective to comprehend. Climate change has lately risen to the top of the worldwide agenda, and both the international community and national governments are scrambling to find adequate answers to its overwhelming impacts on the planet and its people. Migration has become a sobering concern both as an epiphenomenal repercussion of climate change and as an inherent dynamic in and of itself, particularly in the light of recent mass movements of people from war-torn countries such as Syria, Afghanistan, and most recently Ukraine due to Russia's invasion. Climate change is becoming one of the most powerful forces driving human migration; many observers claim that in the near future, its impact may exceed all man-made impacts. Although violence, persecution, and poverty have always driven people to leave their homes and their countries, climate change and natural disasters such as massive earthquakes, destructive floods, and global warming are increasingly impacting migratory patterns. The current global climate emergency has begun to influence not only the security of humans but also nation-states. While some natural disasters such as earthquakes and floods cause direct and immediate human displacements, climate change-related emergencies such as drought and erosion cause slow but steady migrations. As incremental climate change can increase the risk of natural disasters, their consequences will have vital implications for displacements, local or cross-border, and international policymaking. The right to a healthy and humane environment includes the enjoyment of a safe, clean, and sustainable climate, which is crucial to human existence and well-being. It is the responsibility of all states to take necessary measures such as preparing rights-based decarbonization plans, achieving zero carbon emissions, decreasing the use of fossil fuels, protecting vulnerable peoples, and increasing climate finance. In other words, maintaining a safe climate and protecting human rights are two interrelated issues. While most observers have been focusing on the movement of people leaving their homes and

countries due to war and political crises far less attention has been given to the millions fleeing their homes and countries due to climate change or other natural disasters According to the International Displacement Monitoring Center since 2008 more than 21 million people on average per year have been displaced due to different natural disasters The capacity of nation states in dealing with large swathes of people fleeing their home countries due to war conflicts natural disasters and climate change has been of increasing interest for scholars and policymakers The international refugee system and associated institutions have been criticized for failing to address the issue and lagging behind the developments producing further refugees Countries particularly the developed ones are responding to the problem by erecting further walls on their borders and around their policies leading to the securitization of refugees bases mainly on economic arguments while most of the world s refugees continue to live in less developed parts of the world Mental walls are also erected in front of refugees In line with the rise of right wing populism in Western and European countries refugees are invariably politicized via anti refugee discourses marked by the cultural difference they exemplify Turkey s open door policy toward Syrian refugees since 2011 presents an exceptionally welcoming approach compared to the strict refugee regime of EU countries Notwithstanding the dubious normative power of Europe and liberal humanitarianism it stands for most European countries reveal an unequivocal stance against accepting refugees from the South and the East Whereas they have unconditionally opened their arms to Ukrainians fleeing their country due to the Russian invasion revealing a bitter double standard of the West when it comes to war and refugees Our special issue entitled Climate Change and Migration strives to accomplish two broad objectives First and foremost it seeks to present an alarming and innovative perspective on climate change via case studies from all across the world Second we want to look at migration from the vantage point of global and regional dynamics that force people to migrate to hopefully safer parts of the world at the risk to their lives and we want to encourage international organizations and governments to find long term solutions to this ever changing process To fulfill these aims our on topic commentaries set off with a case study from Kerala the southernmost state in India Irudaya Rajan and his colleagues evaluate the role of inter state migrants in the socio economic profile of Kerala and comment on the necessity to include them as a priority in the migration policy discussions particularly in light of the state s proneness to natural disasters They conclude that because the region is prone to regular floods landslides and other natural disasters it is long overdue for inter state migrants to be integrated into society and state policy to avoid mass migration and abuse during such trying times Burak G ne and Haydar Karaman examine how the UN Human Rights Council s recent decision recognizing The Human Right to a Safe Clean Healthy and Sustainable Environment prepares the way for a legal political debate over climate related issues Turning their critical gaze to the case of Haiti they analyze the consequences and significance of international law and politics on climate refugees as well as offer practical answers for persons who have been relocated as a result of environmental problems They hypothesize that the migration as an adaptation framework could be useful for policymakers in

determining how voluntary migration can help reduce vulnerability and exposure to climate related damages based on their analysis of the relevance of international law and politics on climate refugees in the case of the Republic of Haiti Their demand for nations to adopt legal frameworks and enforceable mechanisms to cope with this unavoidable threat is of paramount importance In our next commentary Abdullah Ayaz discusses climate change as well as the more recent causes of migratory migrations from a global perspective In particular he examines the impact of externalization policies on migratory movements which are predicted to gather steam as a result of the expanding diversity of push factors He also highlights the roles and implementation of border restrictions repatriation agreements and other legal procedures aimed at making international protection and financial support programs more difficult for migrants The author rightly calls for a more equitable reorganization of migration management at the international level due to the increased effect and frequency of migration As a logical conclusion of his recommendations Ayaz asks the international community to assume greater responsibility for migration related events and focus on addressing the core causes of migration To make international migration management more just equitable and humane one may draw from this debate that it is necessary to focus on the primary causes for migration rather than aiming to drive migrants away through externalization policies The critical perspective that binds together all discussions in our special issue also marks Alexander Ugwukah s timely commentary on the migration to and from Libya The socio economic ramifications of illegal migration to and from Libya are examined in this study in a brief yet perceptive manner Its goal is to examine the underlying reasons and exacerbation of the development its transformation into new kinds of slavery and a source of revenue for some criminal elements the involvement of the EU and how it impacts Nigerians and other nationals in Sub Saharan Africa Ugwukah concludes that the situation needs to be addressed from all angles the source of the supply the Libyan recipients and accomplices and the final destination locations in Europe which will either accept or reject the migrants In our final on topic commentary mer Y lmaz examines Ankara s safe zones in Northern Syria as well clarifying whether creating safe zones in response to the Syrian civil conflict and the subsequent humanitarian catastrophe was a choice or a requirement for Ankara in terms of irregular migration and border security Y lmaz argues Turkey has declared multiple safe zones within Syria s borders using its right to self defense under international law to battle terrorist organizations that have taken advantage of the increasing vacuum in authority on Syrian land to put Turkish borders and nationals at danger Recounting the critical turning points in the Syrian civil war Y lmaz proposes that the safe zones serve three preemptive and prospective functions i by providing a safe haven for the civilian population ii by paving a step forward in the counter terrorism campaign and attempts to stop irregular migration and finally iii by allowing Syrians to return to their homeland In our off topic commentary Zafer Me e provides a timely overview of German Turkish relations vis vis the formation of the traffic light coalition as a result of the national elections of September 26 2021 Me e examines future bilateral ties with the incoming German administration by comparing the Turkish German

bilateral route since the turn of the millennium to a symbolic roller coaster ride to explain the ups and downs in the domain of foreign and security policy. Mehmet Emin Binpınar and İdem Tu discuss the link between climate change and migration as well as the potential repercussions in the context of climate security throughout the world and in Turkey. They conclude that in line with the fulfillment of human rights international cooperation should assist the realization of the right to life, the right to enough food, water, appropriate health, opportunities, education, the right to housing, and the right to self-realization. Next, Yusuf Alpaydın examines the migration experiences of Meskhetian Turkic high school students to Turkey. Yusuf Alpaydın points to the fact that in today's globe, there is a lot of migration between nations, which is both frequent and severe at times, and these movements have an impact on the nations' economic health and education systems, and it will be advantageous for educational decision makers to conduct a comprehensive analysis of these populations' requirements and develop solutions to their difficulties. Ching An Chang examines the socioeconomic makeup of Syrian refugees in Turkey and the opportunities it presents for better organizing refugee policy. The Syrian conflict, which has lasted more than ten years, is the worst humanitarian disaster since WWII. Turkey is home to over four million Syrians, the largest of any country. According to the author, there is still a long way to go before war refugees can return to their homeland, and many of them have already formed a new life in the host nation; it is difficult for them to just abandon what they have achieved. More to the point, the destruction of their communities back home is another reason why people are hesitant to return; therefore, the development of a long-term integration strategy for the host nations is unavoidable. The destruction resulting from state violence and the concomitant ethical concerns are the main themes of Rabia Aamir's study of the personal story of Ghada Karmi, an anglicized Arab woman who was forced to leave her birth and childhood home in Palestine more than eighty-three years ago. This conceptual paper examines how Karmi presents her right to return to the land of her birth, how she problematizes the ongoing marginalization, erasure, and Nakba of her land, both by external and internal factors, and how she states the environmental ethic of her place, all while understanding the need for social justice and decolonization as expressed in her memoir. Sibel Yanık Aslan questions whether the inclusive link between migration and security has an impact on efforts to develop uniform migration policy and concludes that the formulation of an efficient immigration strategy is hampered by decisions made under the impact of securitization. When migration is regulated only for security reasons, Yanık Aslan argues, the EU's basic ideals are jeopardized. In the penultimate article, Hatice Karahan and Nigar Tuşuz assess the link between the socioeconomic rights of headscarved women in Turkey and official attitudes about the headscarf. Their findings suggest that real variety and integrity in the labor market cannot be attained in Turkey unless political and economic forces firmly

promote equitable treatment for women professionals who choose to follow the Islamic dress code In the final article Murat Iglal and Smail Kise analyze the US Black Sea policies using Jentleson's framework dubbed as 4Ps referring to power peace prosperity and principles They argue that the unilateral moment gave American leaders the impression that they could easily achieve all of their goals however as they point out in various places including the South China Sea the Middle East and the Black Sea region power seeking practices frequently clashed with the interests of other regional powers resulting in instability This issue of Insight Turkey aims to present the current intertwined situation of climate change and migration through providing its readers with a general framework of the global natural challenges facing migrants and refugees and highlight different migration and refugee policies from a selection of cases We hope that this issue will pave the way for future research into the relationship between climate change and migration and the necessary policies that need to be undertaken in this regard

The Climate Change Challenge and the Failure of

Democracy David Shearman, Joseph Wayne Smith, 2007-08-30 This provocative book presents compelling evidence that the fundamental problem behind environmental destruction and climate change in particular is the operation of liberal democracy Climate change threatens the future of civilization but humanity is impotent in effecting solutions Even in those nations with a commitment to reduce greenhouse emissions they continue to rise This failure mirrors those in many other spheres that deplete the fish of the sea erode fertile land destroy native forests pollute rivers and streams and utilize the world's natural resources beyond their replacement rate In this provocative book Shearman and Smith present evidence that the fundamental problem causing environmental destruction and climate change in particular is the operation of liberal democracy Its flaws and contradictions bestow upon government and its institutions laws and the markets and corporations that provide its sustenance an inability to make decisions that could provide a sustainable society Having argued that democracy has failed humanity the authors go even further and demonstrate that this failure can easily lead to authoritarianism without our even noticing Even more provocatively they assert that there is merit in preparing for this eventuality if we want to survive climate change They are not suggesting that existing authoritarian regimes are more successful in mitigating greenhouse emissions for to be successful economically they have adopted the market system with alacrity Nevertheless the authors conclude that an authoritarian form of government is necessary but this will be governance by experts and not by those who seek power There are in existence highly successful authoritarian structures for example in

medicine and in corporate empires that are capable of implementing urgent decisions impossible under liberal democracy Society is verging on a philosophical choice between liberty or life But there is a third way between democracy and authoritarianism that the authors leave for the final chapter Having brought the reader to the realization that in order to halt or even slow the disastrous process of climate change we must choose between liberal democracy and a form of authoritarian government by experts the authors offer up a radical reform of democracy that would entail the painful choice of curtailing our worldwide reliance on growth economies along with various legal and fiscal reforms Unpalatable as this choice may be they argue for the adoption of this fundamental reform of democracy over the journey to authoritarianism

Working Class Change the World? Michael D. Yates, 2018-10-02 An analysis of how the working class can mobilize as a force for change in the present day One of the horrors of the capitalist system is that slave labor which was central to the formation and growth of capitalism itself is still fully able to coexist alongside wage labor But as Karl Marx points out it is the fact of being paid for one's work that validates capitalism as a viable socio economic structure Beneath this veil of free commerce where workers are paid only for a portion of their workday and buyers and sellers in the marketplace face each other as equals lies a foundation of immense inequality Yet workers have always rebelled They've organized unions struck picketed boycotted formed political organizations and parties sometimes they have actually won and improved their lives But Marx argued because capitalism is the apotheosis of class society it must be the last class society it must therefore be destroyed And only the working class said Marx is capable of creating that change In his timely and innovative book Michael D Yates asks if the working class can indeed change the world Deftly factoring in such contemporary elements as sharp changes in the rise of identity politics and the nature of work itself Yates asks if there can in fact be a thing called the working class If so how might it overcome inherent divisions of gender race ethnicity religion location to become a cohesive and radical force for change Forcefully and without illusions Yates supports his arguments with relevant clearly explained data historical examples and his own personal experiences This book is a sophisticated and prescient understanding of the working class and what all of us might do to change the world [Planetary Health - Laws, Policies and Science on the 'One Health' Approach](#) Giovanni Antonelli, Fabrizio Penna, Eeshan Chaturvedi, Antonio Cilento, 2025-06-06 This book offers a multidisciplinary and in depth analysis of the One Health approach The holistic One Health vision a healthcare model based on the integration of various disciplines is both ancient and current It is based on the recognition that human health animal health and ecosystem health are inextricably linked Cognizant of the need for multidisciplinary research to address complex health challenges at the national and international level the book combines legal public policy and medical perspectives on the One Health approach exploring e.g. the role of biodiversity human rights trade agreements indigenous knowledge and climate change mitigation and adaptation One Health is officially recognized by the European Commission and by a host of international organizations as a relevant strategy for actors in all sectors that benefit from collaboration between disciplines doctors veterinarians lawyers environmentalists economists sociologists etc One Health is an ideal approach to achieving global health as it addresses the needs of the most vulnerable populations based on the intimate relationship between their own health that of their animals and that of the environment in which they live considering the wide spectrum of determinants that emerge from this relationship Given its scope the book will be of interest to academics professionals and students of all disciplines who engage with the One Health approach
