mit demografischen Daten der Wahlberechtigten gearbeitet. Bis heute wurden immense Fortschritte gemacht, sodass nun auch psychologische Daten erhoben werden. Um Wähler gezielt anzusprechen zu können, müssen im ersten Schritt ihre Interessen sowie ihr Charakter analysiert und anschließend sich ähnelnde Personen in Gruppen zusammengefasst werden. An der Stelle wird das Clustering des Data Mining eingesetzt. In dieser Thesis wird anhand von personenbezogenen Daten, die von Facebook-Profilen erhoben werden, eine beispielhafte Clusteranalyse mit RapidMiner Studio durchgeführt. Um das Problem und die geschichtliche Entwicklung darzustellen, wird auf diverse Zeitungs- und Zeitschriftenartikel bezogen. Die Theorie zu Data Mining, der Clusteranalyse und zum Microtargeting beschränkt sich auf die Bereiche, die für die praktische Analyse von Bedeutung sind. Für das Data Mining wird hauptsächlich das Buch Data Mining von Cleve und Lammel genutzt. Für das Anwendungsszenario werden zunächst die Art und Weise der Datenerhebung sowie die Daten an sich detailliert beschrieben, und anschließend der Analyseprozess im RapidMiner Studio mit Screenshots erklärt und die Ergebnisse mit Diagrammen visualisiert. Das Besondere an dieser Untersuchung ist es, dass Daten über politische Ansichten der Personen zwar erhoben werden, aber nicht in die Analyse einfließen. Damit soll ermittelt werden, ob in den entstandenen Clustern jeweils eine Mehrheit von politisch gleich ausgerichteten Menschen zu erkennen ist.

Modern Trends in Cartography Jan Brus, Alena Vondrakova, Vit Vozenilek, 2014-12-02 The fast exchange of information and knowledge are the essential conditions for successful and effective research and practical applications in cartography. For successful research development, it is necessary to follow trends not only in this domain but also try to adapt new trends and technologies from other areas. Trends in cartography are also quite often topics of many conferences which have the main aim to link research, education, and application experts in cartography and GIS into one large platform. Such the right place for exchange and sharing of knowledge and skills was also the CARTOCON2014 conference which took place in Olomouc, Czech Republic, in

February 2014 and this book is a compilation of the best and most interesting contributions. The book content consists of four parts. The first part, New approaches in map and atlas making, collects studies about innovative ways in map production and atlases compilation. Following part of the book, Progress in web cartography, brings examples and tools for web map presentation. The third part, Advanced methods in map use, includes achievement of eye tracking research and users issues. The final part, Cartography in practice and research, is a clear evidence that cartography and maps played the significant role in many geosciences and in many branches of the society. Each individual paper is original and has its place in cartography.

Guide to Data Privacy Vicenç Torra, 2022-11-04. Data privacy technologies are essential for implementing information systems with privacy by design. Privacy technologies clearly are needed for ensuring that data does not lead to disclosure but also that statistics or even data driven machine learning models do not lead to disclosure. For example, can a deep learning model be attacked to discover that sensitive data has been used for its training? This accessible textbook presents privacy models, computational definitions of privacy and methods to implement them. Additionally, the book explains and gives plentiful examples of how to implement among other models, differential privacy, k-anonymity and secure multiparty computation. Topics and features: Provides integrated presentation of data privacy including tools from statistical disclosure control, privacy preserving data mining and privacy for communications. Discusses privacy requirements and tools for different types of scenarios including privacy for data for computations and for users. Offers characterization of privacy models comparing their differences, advantages and disadvantages. Describes some of the most relevant algorithms to implement privacy models. Includes examples of data protection mechanisms. This unique textbook guide contains numerous examples and succinctly and comprehensively gathers the relevant information. As such, it will be eminently suitable for undergraduate and graduate students interested in data privacy as well as professionals wanting a concise overview. Vicenç Torra is Professor with the Department of Computing Science at Ume University, Ume, Sweden.
