Pdf Hierarchy Organisation General Hierarchical Systems:

Toward Accessible Multilevel Modeling in Systems Biology Carsten Maus, 2013 Promoted by advanced experimental techniques for obtaining high quality data and the steadily accumulating knowledge about the complexity of life modeling biological systems at multiple interrelated levels of organization attracts more and more attention recently Current approaches for modeling multilevel systems typically lack an accessible formal modeling language or have major limitations with respect to expressiveness The aim of this thesis is to provide a comprehensive discussion on associated problems and needs and to propose a concrete solution addressing them At first several formal modeling approaches are examined regarding their suitability for describing biological models at multiple organizational levels Thereby diverse aspects are taken into account such as the ability to describe dynamically changing hierarchical model structures and how upward and downward causation between different levels can be expressed Based on the results of this study a domain specific language concept is developed to facilitate multilevel modeling in systems biology The presented approach combines a rule based modeling paradigm with dynamically nested model structures attributed entities and flexibly constrained reaction rates Its expressive power accessibility and general usefulness for describing biological multilevel models are illustrated with the help of two exemplary case studies

Bridging the Gap between Life and Physics Ron Cottam, Willy Ranson, 2018-03-19 This is the only book which deals with the correlatory comparison between hierarchical living systems and inorganic physical ones The culmination of the book is the proposition of research to discover and understand the natural underlying level of organization which produces the descriptive commonality of life and physics Traditional science eliminates life from its purview by its rejection of interrelationships as a primary content of systems The conventional procedure of science is that of reductionism whereby complex systems are dismantled to characterize lower level components but virtually no attention is given to how to rebuild those systems the underlying assumption is that analysis and synthesis are symmetrical This book fulfills two main coupled functions Firstly it details hierarchy as the major formulation of natural complex systems and investigates the fundamental character of natural hierarchy as a widely transferable container of structure and or function and this in the case of the new development of a representational or model hierarchy Secondly it couples this hierarchical description to that of the electronic properties of semiconductors as a well modeled canonical example of physical properties The central thesis is that these two descriptions are comparable if care is taken to treat logical and epistemological aspects with prudence a large part of the book is composed of just this aspect of care for grounding consistency As such great attention is given to correct assessment of argumentative features which are otherwise presumed known but which are usually left uncertain Development of the ideas is always based on a relationship between entity or phenomenon and their associated ecosystems and this applies equally well to the consequent derivations of consciousness and information

Funding Religious Heritage Anne Fornerod, 2016-03-09 This collection brings together a group of highly respected law and religion scholars to explore the funding of religious heritage in the context of state support for religions The importance of this state support is that on the one hand it illustrates the potential tensions between secular and religious values whilst on the other it constitutes a relevant tool for investigating the question of the legitimacy of such financial support The funding logically varies according to the national system of state religion relationships and this is reflected in the range of countries studied including Belgium Bulgaria Denmark France Italy The Netherlands Spain Turkey and the United Kingdom The book provides clarity in the assignment of funds to religious heritage as well as seeking to define the limit of what relates to the exercise of worship and what belongs to cultural policy It is clear that the main challenge for the future lies not only in managing the dual purpose of religious monuments but also in re using these buildings which have lost their original purpose This collection will appeal to those interested in cultural heritage management as well as law and religion scholars The views expressed during the execution of the RELIGARE project in whatever form and or by whatever medium are the sole responsibility of the authors The European Union is not liable for any use that may be made of the information contained therein
