

Digital Thermostat

Owners Manual

Model: GP12H7

Your new thermostat will provide years of reliable service. Using this digital thermostat will provide more uniform comfort in your home through the seasons. Thank you for buying the product.

Please read this manual for complete instructions on installing and operating your thermostat. If you require further assistance, please feel free to contact us.

IMPORTANT INFORMATION

1. This thermostat is designed to work on the following systems:

- Gas - Standing Pilot
- Gas - Electronic Ignition
- Gas - Flood/Burner
- Gas - Milicut Systems
- Oil - Flood/Burner
- Oil - Flood Furnace
- Single Stage Heat Pumps - with no auxiliary heat
- Electric Furnace
- Electric Air Conditioning

This thermostat will NOT control multi-stage heat pumps or 115/200V baseboard electric heating systems.

2. Temperature Range

This thermostat can be set between 45°F and 96°F (5°C and 35°C). However, it will display room temperatures from 30°F to 96°F (16°C and 35°C). 96°F will be displayed if the temperature is higher than 96°F (35°C), and 30°F will be displayed if the temperature is lower than 30°F (1°C).

This thermostat will automatically switch to Heat mode if the temperature runs above 96°F (35°C), and automatically switch to Cool mode if the temperature drops below 45°F (5°C).

3. Compressor Protection

This thermostat provides a 4 minute delay after shutting off the compressor before it can be restarted. This feature will prevent damage to your compressor caused by rapid cycling. It does not prevent a rapid compressor restart due to short power outages.

4. Battery Warning

Two fresh AA alkaline batteries should provide well over one year of service. However, when the batteries become drained the Low Battery Indicator will flash on the display. When this message occurs, install new alkaline batteries. You have approximately 1 minute to change the batteries and keep the thermostat's settings. Once the batteries have become too low to ensure proper operation, your system will be turned off, and the display will be cleared except for flashing Low Battery Indicator on the LCD display.

CAUTION: When only the battery icon flashes on the display, the thermostat is shut down, and your system will no longer operate. In this condition, there is no temperature control of your dwelling.

NOTE: The backlight will not function when the thermostat is in low battery condition.

NOTE: If you plan to be away from the premises over 30 days, we recommend that you replace the old batteries with new alkaline batteries prior to leaving.

FEATURES

Structure of thermostat and explanation for the keypad

OPERATION

Start-up

The LCD will show the factory default display of 70°F (21°C) when batteries are first installed. The temperature will update after a few seconds.

System Selector Switch

The System Selector switch on the front of the thermostat determines the operating mode of the thermostat. You may select COOL, OFF, HEAT.

NOTE: Anytime you install or remove the thermostat from the wallplate, slide the System Selector to the OFF position to prevent the possibility of a rapid system On - OFF.

Fan Switch

The Fan switch should normally be located in the AUTO position. The Fan will be turned on along with normal operation of your system. In a normal gas or oil furnace, the Fan will be turned on by your furnace after its warm-up delay. For electric heat, air conditioning, and heat pump operation, the Fan will turn on with the system.

To run the Fan continuously, slide the Fan switch to the ON position.

Review Current Set Temperature

Press either the up or down key once to see the Set Temperature. The factory default is 68°F (20°C) when started with the System Switch Off or Heat, and 74°F (24°C) when started with the System Switch on Cool.

Setting New Temperature

Press either the up or down once and display the set temperature.

Press either up or down again to change to your desired Set Temperature. Hold the key down for over 2 seconds to fast advance the Set Temperature.

The display will return to the normal room temperature after the keys have been released for 5 seconds.

Filter Monitor

The thermostat counts the number of hours your system's filter has been in use. To maximize your system's performance and energy efficiency, change or clean your filter regularly. When the total system run time for heat and cool reaches 400 hours, the Filter Change Indicator will flash as a reminder to check your system's filter.

After changing or cleaning the system filter, press and hold the Filter key for 3 seconds. The display will blink, and the counter will be reset to zero.

After Pressing the Filter key at any time for less than 3 seconds will cause the Filter Change Indicator to appear on the LCD. This is only to confirm key operation, and the counter is not affected unless the key is held for greater than 3 seconds.

SPAN Setting

Your thermostat is set at the factory to cycle at 1°F (1°C) above and below the set temperature. (Span = 2) This setting has been designed to provide a comfortable room temperature under most all conditions. However, if you find your system cycling too fast or too slow, then the Span can be adjusted to modify the cycle time.

- Press and hold BOTH up and down keys for three seconds, SPAN will be displayed on the LCD.
- Press up to raise the Span to 3. This setting INCREASES no cycle time by allowing your system to run LONGER.
- Press down to lower the Span to 1. This setting DECREASES the cycle time by causing your system to run SHORTER.

The Span settings remain the same for both HEAT and COOL, and can be changed in any System Switch position.

When batteries are installed in the thermostat, the Span is reset back to setting 2.

Backlighting

Your thermostat has an electroluminescent lamp that backlights the display for easy viewing in the dark.

When any key is pressed, the display is illuminated.

The display will remain illuminated for 7 seconds after the last key is pressed. This allows the light to stay on if you need to operate several keys.

NOTE: If the thermostat is in a Low Battery warning condition, the backlight

will not operate. Replace with 2 new AA alkaline batteries to restore the Backlight function.

Low Battery Warning

Your thermostat has a two-stage low battery warning system. When the batteries are first detected to be weak, the first stage low battery warning is indicated by battery symbol flashing on the LCD display. At your earliest convenience, you need to replace the batteries with 2 new AA alkaline batteries. When the batteries become too weak for normal operation, the thermostat enters the second stage low battery warning which shuts down the thermostat. In this condition, battery symbol flashes alone on the display, and the thermostat will turn your system off. Your system will remain shut-off until the batteries are replaced.

Note: The thermostat will still keep the current Set Temperature and Filter indicator in memory until new batteries are installed. After confirming that new batteries have been inserted, the thermostat will return to normal operation.

Error Mode

If the thermostat is unable to control your system due to an unexpected battery problem, the thermostat will enter Error Mode. In this condition, the thermostat flashes "E1" or "E2" on the LCD display, and shuts off your system.

To correct this problem, replace the batteries with 2 new AA alkaline batteries, even if you have recently replaced them. Next, Move the battery out hold any key then place the battery again. You will need to reprogram your thermostat and confirm normal operation. If Error Mode returns, please call us for further information.

Auto Cut Off

Your thermostat will automatically switch to Heat mode if the room temperature runs above 96°F (35°C). It will switch to Cool mode if the room temperature drops below 45°F (5°C).

Note that if your system has malfunctioned and no longer responds to thermostat controls, the Auto Cut Off will have no effect.

Mechanical Heat Backup

This thermostat includes a bimetal switch that will automatically turn on the Heat when the temperature reaches about 41°F (5°C). **WARNING:** This switch only activates the heating terminal (H). The system must be capable of automatically turning the Fan On. Without normal Fan operation, severe damage to the heating system equipment.

INSTALLATION

What You Need

This thermostat includes two AA sized screws and two wall anchors for mounting. To install your thermostat, you should have the following tools and materials:

- Scaled Correspondent
- Small Phillips screwdriver
- Hammer
- Electric drill and 3/16" bit
- Two 1.5V (AAA) size alkaline batteries (included)

Remove Old Thermostat

CAUTION: Do not remove any wiring from existing thermostat before reading the instructions carefully. Wires must be labeled prior to removal.

IMPORTANT: Turn off the power to the furnace at the main power panel or at the furnace.

Remove existing thermostat cover and thermostat. Some thermostats will have screws or other locking devices that must first be removed. Once the wall mounting plate is exposed, look for wires. If wires are not visible, they may be connected to the back of the wallplate. Again, look for screws, tabs, etc. Some models have doors that open to expose wires and mounting screws. See Figure 1.

Typical Home Thermostats

Wire Labeling

Each wire coming from the wall to the existing thermostat is connected to a terminal point on the thermostat. Each of these terminal points is usually marked with a code letter as shown in Table A below:

Note that this thermostat has multiple function terminals that allow Single-Stage Heat Pump capability. Standard systems use: R, Rh, G, Y, W (Single-Stage Heat Pumps use: R, Y, G, and O or S.) Table A below shows
