Novel Ecosystems Intervening In The New Ecological World Order:

Novel Ecosystems Richard J. Hobbs, Eric S. Higgs, Carol Hall, 2013-01-07 Land conversion climate change and species invasions are contributing to the widespread emergence of novel ecosystems which demand a shift in how we think about traditional approaches to conservation restoration and environmental management They are novel because they exist without historical precedents and are self sustaining Traditional approaches emphasizing native species and historical continuity are challenged by novel ecosystems that deliver critical ecosystem services or are simply immune to practical restorative efforts Some fear that by raising the issue of novel ecosystems we are simply paving the way for a more laissez faire attitude to conservation and restoration Regardless of the range of views and perceptions about novel ecosystems their existence is becoming ever more obvious and prevalent in today's rapidly changing world In this first comprehensive volume to look at the ecological social cultural ethical and policy dimensions of novel ecosystems the authors argue these altered systems are overdue for careful analysis and that we need to figure out how to intervene in them responsibly This book brings together researchers from a range of disciplines together with practitioners and policy makers to explore the questions surrounding novel ecosystems It includes chapters on key concepts and methodologies for deciding when and how to intervene in systems as well as a rich collection of case studies and perspective pieces It will be a valuable resource for researchers managers and policy makers interested in the question of how humanity manages and restores ecosystems in a rapidly changing world A companion website with additional resources is available at www.wiley.com/go/hobbs/ecosystems

Rethinking the Environment for the Anthropocene Manuel Arias-Maldonado, Zev Trachtenberg, 2019-01-15 This book brings together the most current thinking about the Anthropocene in the field of Environmental Political Theory EPT It displays the distinctive contribution EPT makes to the task of thinking through what the environment means in this time of pervasive human influence over natural systems Across its chapters the book helps develop the idea of socionatural relations an idea that frames the environment in the Anthropocene in terms of the interconnected relationship between human beings and their surroundings Coming from both well established and newer voices in the field the chapters in the book show the diversity of points of view theorists take toward the Anthropocene idea and socionatural relations more generally However all the chapters exemplify a characteristic of work in EPT the self conscious effort to provide normative interpretations that are responsive to scientific accounts The Introduction explains the complicated interaction between science and EPT showing how it positions EPT to consider the Anthropocene And the Afterword by a pioneer in the field relates all the chapters to a perspective that has been deeply influential in EPT This book will be of interest to scholars already engaged in EPT But it will also serve as an introduction to the field for students of Political Theory Philosophy Environmental Studies and related disciplines who will learn about the EPT approach from the Introduction and then see it applied to the pressing question of the Anthropocene in the ensuing chapters The book will also help readers interested in the Anthropocene from any

disciplinary perspective develop a critical understanding of its political meanings *Landschaftsökologie* Ulrich Walz, Uta Steinhardt, 2024-10-16 Landschaft ist ein wichtiger Schlüssel zur Nachhaltigkeit Aktuelle Krisen wie der Biodiversitätsverlust und der Klimawandel verlangen nach integrativen Betrachtungsweisen und Lösungsansätzen zu unserem Umgang mit Landschaft den wir grundlegend ändern müssen Landschaftsökologie will genau das fach und sektor bergreifend analysieren und Lösungen aufzeigen Der Blick auf das Ganze auf Landschaft die mehr ist als die Summe ihrer Teile zeichnet die landschaftsökologische Arbeitsweise aus Darum geht es auch in diesem Buch natur sozial und kulturwissenschaftliche sowie planerische Sichtweisen auf die Probleme unserer Zeit aufzuzeigen und zu verbinden Landschaftsökologischen Institutionen aus Deutschland geben Einblicke in die aktuell von ihnen bearbeiteten Themen und zeigen so die Leistungsfähigkeit des Faches insgesamt auf Ziel des Werkes ist es die aktuelle Bandbreite landschaftsökologischer Forschung anhand zahlreicher Beispiele zu verdeutlichen und die Fachkolleg_innen und Studierende der Landschaftsökologie und verwandter Fächer wie Geographie Umweltwissenschaften Biologie Ökologie etc zu erreichen *Conservation in the Anthropocene* Fred Van Dyke, 2025-03-06 This book provides a critical assessment of conservation in the Anthropocene grounded in the personal historical and cultural development of human interaction with nature The author argues that conservation can no longer be primarily about preserving nature but must adapt its efforts to promote changes through which humans create a landscape that is neither abandoned nor degraded but used well by humans and non humans alike The book first reviews the origin of ideas and conditions that have led to the concept and classification of the Anthropocene and explores how the author's own interactions with nature were shaped through his experience as a conservation biologist Next it considers how humans have come to be the primary drivers of ecological activity geological events and climate change Chapters then focus on the need for new conservation thinking regarding novel ecosystems urban conservation the role of Indigenous Peoples in conservation and the value of protected areas PAs parks and wilderness The book concludes by identifying strategies for effective conservation and argues for a new formulation of conservation values that redefine human relationships and interaction with nature Chapters are enlivened by the personal experiences of the author and the first person narratives of conservation activists and scientists throughout the world who are learning to practice and succeed in conservation efforts under Anthropogenic conditions Drawing on global examples this book will be of great value to students and scholars of biodiversity conservation and environmental science ready to consider a new way of looking at the care and nurture of nature in the Anthropocene

Ecological Restoration in International Environmental Law Anastasia Telesetsky, An Cliquet, Afshin Akhtar-Khavari, 2016-12-01 Human activities are depleting ecosystems at an unprecedented rate In spite of nature conservation efforts worldwide many ecosystems including those critical for human well being have been damaged or destroyed States and citizens need a new vision of how humans can reconnect with the natural environment With its focus on the long term holistic recovery of ecosystems ecological restoration has received increasing attention in the past decade from both scientists and policymakers Research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked This is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration While international environmental law IEL has developed significantly as a discipline over the past four decades this book enquires whether IEL can now assist states in making a strategic transition from not just protecting and maintaining the natural

environment but also actively restoring it. Arguing that states have international duties to restore, this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law, European Union law, and national law perspective. The book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists, including the role of private actors, protected areas, and climate change in ecological restoration.

Effective Conservation Science Peter M. Kareiva, Michelle Marvier, Brian R. Silliman, 2018. This novel text assembles some of the most intriguing voices in modern conservation biology. Collectively, they highlight many of the most challenging questions being asked in conservation science today, each of which will benefit from new experiments, new data, and new analyses. The book's principal aim is to inspire readers to tackle these uncomfortable issues head-on. A second goal is to be reflective and consider how the field has reacted to challenges to orthodoxy and to what extent it has or can. These challenges advance conservation science. Furthermore, several chapters discuss how to guard against confirmation bias. The overall goal is that this book will lead to greater conservation of ecosystems and biodiversity by harnessing the engine of constructive scientific scepticism in service of better results.

Recombinant Ecology - A Hybrid Future? Ian D. Rotherham, 2017-01-18. This is a challenging new approach to understanding ecological systems, especially in urban and urbanised areas. Synthesising current ideas and approaches, the book develops an historic context to ecological fusion and recombinant or hybrid ecosystems. With massive climate change and other environmental fluxes, this volume provides insight into consequences for future ecologies. Invasive and non-native or alien species are spreading, often aggressively, around the globe. However, much current thinking in ecology and nature conservation fails to accommodate the consequences of changing environmental conditions and fusion of both species and ecological communities. Whether or not conservationists accept ecological change factors such as urbanisation and globalisation, combine with climate and other changes to trigger new hybrid communities and ecologies. Embedding this approach into current ecological thinking, this book presents an overview of ideas set in the exemplar case study area of the British Isles. However, the approaches, ideas, and conclusions presented here will find application in ecosystem studies and in nature conservation around the world.

Landscape and Ecosystem Diversity, Dynamics and Management in the Yellow River Source Zone Gary John Brierley, Xilai Li, Carola Cullum, Jay Gao, 2016-05-23. It focuses on landscapes as a platform for considering environmental values and issues across the region. The book is based on extensive field-based analyses, applications, and photographs.

Encyclopedia of the Anthropocene, 2017-11-27. Encyclopedia of the Anthropocene Five Volume Set presents a currency-based global synthesis cataloguing the impact of humanity's global ecological footprint. Covering a multitude of aspects related to Climate Change, Biodiversity, Contaminants, Geological Energy, and Ethics, leading scientists provide foundational essays that enable researchers to define and scrutinize information, ideas, relationships, meanings, and ideas within the Anthropocene concept. Questions widely debated among

scientists humanists conservationists politicians and others are included providing discussion on when the Anthropocene began what to call it whether it should be considered an official geological epoch whether it can be contained in time and how it will affect future generations Although the idea that humanity has driven the planet into a new geological epoch has been around since the dawn of the 20th century the term Anthropocene was only first used by ecologist Eugene Stoermer in the 1980s and hence popularized in its current meaning by atmospheric chemist Paul Crutzen in 2000 Presents comprehensive and systematic coverage of topics related to the Anthropocene with a focus on the Geosciences and Environmental science Includes point counterpoint articles debating key aspects of the Anthropocene giving users an even handed navigation of this complex area Provides historic seminal papers and essays from leading scientists and philosophers who demonstrate changes in the Anthropocene concept over time

Routledge Handbook of Ecological and Environmental Restoration Stuart K. Allison, Stephen D. Murphy, 2017-05-18 Ecological restoration is a rapidly evolving discipline that is engaged with developing both methodologies and strategies for repairing damaged and polluted ecosystems and environments During the last decade the rapid pace of climate change coupled with continuing habitat destruction and the spread of non native species to new habitats has forced restoration ecologists to re evaluate their goals and the methods they use This comprehensive handbook brings together an internationally respected group of established and rising experts in the field The book begins with a description of current practices and the state of knowledge in particular areas of restoration and then identifies new directions that will help the field achieve increasing levels of future success Part I provides basic background about ecological and environmental restoration Part II systematically reviews restoration in key ecosystem types located throughout the world In Part III management and policy issues are examined in detail offering the first comprehensive treatment of policy relevance in the field while Part IV looks to the future Ultimately good ecological restoration depends upon a combination of good science policy planning and outreach all issues that are addressed in this unrivalled volume

Urban Ecosystem Justice Scott Kellogg, 2021-09-22 Merging together the fields of urban ecology environmental justice and urban environmental education Urban Ecosystem Justice promotes building fair accessible and mutually beneficial relationships between citizens and the soils water atmospheres and biodiversity in their cities This book provides a framework for re centering issues of justice and fairness in sustainability discourse while challenging the profound ecological alienation experienced by urban residents While the urban sustainability movement has had many successes in the past few decades there remain areas for it to grow For one the benefits of sustainability have disproportionately benefited wealthier city residents with concerns over equity justice and social sustainability frequently taking a back seat to economic and environmental considerations Additionally many city dwellers remain estranged from and unfamiliar with ecological processes with urban environments often thought of as existing outside of nature or as hopelessly degraded Through a citizen centered lens the book offers a guide to reconciling these issues by demonstrating how questions of equity access and

justice apply to the biophysical dimensions of the urban ecosystem soil water air waste and biodiversity Drawing heavily from the fields of urban ecology environmental justice and ecological design this book lays out a science of cities for people a pedagogical platform that can be used to promote ecological literacy in underrepresented urban communities through affordable and decentralized means This book provides both a theoretical and practical field guide to students and researchers of urban sustainability city planners architects policymakers and activists wishing to develop reciprocal relationships with urban ecologies

Doing Political Ecology Gregory L. Simon, Kelly Kay, 2024-10-02 Since its inception the field of political ecology has served as a critical hub for inclusive and transformative environmental inquiry *Doing Political Ecology* offers a distinctive entry point into this ever growing field and argues that our scholarly foundations today more than ever comprise a cross cutting latticework of research approaches and concepts This volume brings together 28 leading scholars from a range of backgrounds and geographies with contributions organized into 18 analytical lenses that highlight different approaches to critical environmental research and ways of seeing nature society interactions The book's contributors engage the breadth and depth of the field recognizing a variety of roots and genealogies and give ample voice to these rich and complementary lineages This inclusive presentation of the field allows diverse theoretical and empirical approaches to intermingle in novel ways Readers will emerge with a wide ranging understanding of political ecology and will attain a diverse toolkit for evaluating human environment interactions Each chapter astutely grounds key methodological theoretical topical and conceptual approaches that animate a range of influential cutting edge and complementary ways of doing political ecology

Conservation Concepts Kurt Jax, 2023-10-31 This book provides a review of the multitude of conservation concepts both from a scientific philosophical and social science perspective asking how we want to shape our relationships with nature as humans and providing guidance on which conservation approaches can help us to do this Nature conservation is a contested terrain and there is not only one idea about what constitutes conservation but many different ones which sometimes are conflicting Employing a conceptual and historical analysis this book sorts and interprets the differing conservation concepts with a special emphasis on narrative analysis as a means for describing human nature relationships and for linking conservation science to practice and to society at large Case studies illustrate the philosophical issues and help to analyse major controversies in conservation biology While the main focus is on Western ideas of conservation the book also touches upon non Western including indigenous concepts The approach taken in this book emphasises the often implicit strategic and societal dimensions of conservation concepts including power relations In finding a path through the multitude of concepts the book showcases that it is necessary to maintain the plurality of approaches in order to successfully address different situations and societal choices Overall this book highlights the very tension which conservation biology must withstand between science and society between what is possible and what we want individually or as a society or even more what is desirable Bringing some order into this multitude will support more efficient conservation

and conservation biology This book will be of great interest to students and scholars studying nature conservation from a variety of disciplines including biology ecology anthropology sociology geography and philosophy It will also be of use to professionals wanting to gain an understanding of the broad spectrum of conservation concepts and approaches and when to apply them *Green Scenarios: Mining Industry Responses to Environmental Challenges of the Anthropocene Epoch* Artur Dyczko, Andrzej Jagodziński, Gabriela Woźniak, 2022-05-24

This book aims to present an alternative based on natural processes and an environmental approach to post excavation site management e.g. post coal mining heaps These sites are places where various mineral excavation by products are collected Nevertheless some post mineral excavation sites are oligotrophic terrestrial wetland and water habitat islands providing unique biodiversity enrichment in the landscape These oligotrophic mineral habitats are essential in over fertilized eutrophic agricultural and urban industry surroundings Some post mineral excavation sites are places where the wildlife can develop and support the functional processes of novel ecosystems Implementing the newest biogeochemical and comprehensive knowledge into urban industry landscape management will help to establish the ecosystem's processes and environmental functioning There are several post industrial sites in Europe where the wildlife areas developed due to natural processes are becoming wildlife hotspots in densely populated urban industry areas In this respect many of the oligotrophic mineral terrestrial wetland and water habitats of anthropogenic origin should not be categorized as environmentally dangerous and undergo economic utility focused reclamation Facing the actual environmental constraints of the Anthropocene Epoch the book's chapters presenting the natural basics and perquisites of the environmental ecosystem mosaics will be interesting for a broad range of environmentalists scientists and students miners economists and sociologists **Ecological Challenges and Conservation**

Conundrums John A. Wiens, 2016-02-23 Short compelling but mostly thought provoking essays that encompass many of the central issues shaping ecology and conservation in the changing world Collected essays from one of the best known ecologists and conservationists in the world Includes all issues at the cutting edge of the interface between ecology and conservation Attractive to a broad audience of ecologists conservationists natural resource managers policy makers and naturalists *Ecology and Evolution of Plant-Herbivore Interactions on Islands* Xoaquín Moreira, Luis

Abdala-Roberts, 2024-01-03 Theory and early empirical work posed that herbivore pressure should be lower on islands than on the mainland owing to lower herbivore abundance and diversity in insular systems Consequently plant taxa found on islands are expected to be less protected or even to have lost their defences completely While early observational studies supported the prediction of lower herbivory and plant defences on islands recent island mainland comparisons have yielded mixed results with some studies finding no differences between islands and mainlands or surprisingly higher herbivory and plant defences on islands In this book the authors aim to reassess current theory and initiate a new generation of work on insularity effects on plant herbivore interactions This book aims to fill the research gaps by integrating the research that has

been done to date and by compiling and summarising new research on insularity effects on plant herbivore interactions It provides a critical examination of the patterns in light of classical theory and identifies potential mechanisms or underlying processes It also aims to raise new questions that will form the basis for a revised and more robust research programme

Species Conservation Jamieson A. Copsey, Simon A. Black, Jim J. Groombridge, Carl G. Jones, 2018-06-28 This book brings together leading conservation practitioners to reflect on their response to the current global biodiversity crisis through the lens of island species recovery and management Initial chapters cover the biological understanding of small population biology and the growing threat of invasive species while subsequent chapters discuss the management of these threats and the complexity of leading projects within a dynamic and still relatively unknown system Multiple case studies from islands worldwide illustrate key points allowing readers to draw on the first hand practical experience of experienced professionals This resource will be invaluable to both current and future conservation professionals helping them to go beyond disciplinary comfort zones and develop manage and lead projects over extensive timeframes in a way that brings others with them on the journey
