Networked Data Acquisition Systems (Daq 96) - Proceedings Of The Second International Data Acquisition Workshop
Shuhei Ajimura, Masaharu Nomachi, 1997-07-15 This workshop followed the First International Conference which was hosted by Fermilab on 26-28 October 1994. That conference discussed the switch type event builder. Much intensive R D work ensued from it showing the importance of 1 data flow control and 2 high speed memory access on network adapters/drivers. Those two themes are involved in many networked data acquisition systems. Therefore Networked Data Acquisition Systems was selected as the theme of DAQ 96. It includes a wide variety of data acquisition system presentations from present and near future experiments at high energy and nuclear physics laboratories. Practical Intrusion Analysis Ryan Trost, 2009-06-24 Practical Intrusion Analysis provides a solid fundamental overview of the art and science of intrusion analysis. Nate Miller, Cofounder, Stratum Security. The Only Definitive Guide to New State of the Art Techniques in Intrusion Detection and Prevention. Recently, powerful innovations in intrusion detection and prevention have evolved in response to emerging threats and changing business environments. However, security practitioners have found little reliable, usable information about these new IDS/IPS technologies. In Practical Intrusion Analysis, one of the field's leading experts brings together these innovations for the first time and demonstrates how they can be used to analyze attacks, mitigate damage, and track attackers. Ryan Trost reviews the fundamental techniques and business drivers of intrusion detection and prevention by analyzing today's new vulnerabilities and attack vectors. Next, he presents complete explanations of powerful new IDS/IPS methodologies based on Network Behavioral Analysis (NBA), data visualization, geospatial analysis, and more. Writing for security practitioners and managers at all experience levels, Trost introduces new solutions for virtually every environment. Coverage includes: Assessing the strengths and limitations of mainstream monitoring tools and IDS technologies; Using Attack Graphs to map paths of network vulnerability and becoming more proactive about preventing intrusions; Analyzing network behavior to immediately detect polymorphic worms, zero-day exploits, and botnet DoS attacks; Understanding the theory, advantages, and disadvantages of the latest Web Application Firewalls; Implementing IDS/IPS systems that protect wireless data traffic; Enhancing your intrusion detection efforts by converging with physical security defenses; Identifying attackers' geographical fingerprints and using that information to respond more effectively; Visualizing data traffic to identify suspicious patterns more quickly; Revisiting intrusion detection ROI in light of new threats, compliance risks, and technical alternatives. Includes contributions from these leading network security experts: Jeff Forristal, a Rain Forest Puppy senior security professional and creator of libwhisker; Seth Fogie, CEO of Airscanner USA, leading edge mobile security researcher, coauthor of Security Warrior; Dr. Sushil Jajodia, Director, Center for Secure Information Systems, founding Editor in Chief, Journal of Computer Security; Dr. Steven Noel, Associate Director and Senior Research Scientist, Center for Secure Information Systems, George Mason University; Alex Kirk, Member, Sourcefire.
