

ARCHITECTURAL SPECIFICATIONS

01000 GENERAL CONDITIONS

01400 QUALITY CONTROL

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

- a. The conditions of Contract and Division 1, General Requirements, apply to the work of this Section.

1.02 WORK PERFORMED BY TESTING AGENCY

- a. The Contractor shall submit a list of testing agencies to be used in performance of the Work.
- b. The Owner will select an independent Testing Agency from the submitted list or of his own choice to provide testing laboratory services and on-site inspection services, including without limitation testing of soils and concrete.
- c. Unless otherwise specially agreed, testing shall be accomplished as specified, and all sampling and testing procedures shall conform to applicable PNS, ASTM, D.I.N. or British Standards. Testing personnel shall be qualified and shall be completely familiar with required procedures of testing.
- d. Technicians representing the Testing Agency shall inspect the materials to be tested and report their findings to the Owner, Architect and the Contractor.
 1. Work will be checked as it progresses, but failure to detect any defective work or material shall not in any way prevent later rejection when such defect is discovered, nor shall it obligate the Owner for final acceptance of the part of the Work.
 2. When it appears that the material furnished or work performed by the Contractor fails to fulfill specification requirements the Technician shall notify the Owner and the Contractor of such failure.
 3. Technicians shall not act as foreman or perform other duties for the Contractor. Technicians are not authorized to revoke, alter, relax, enlarge or release any requirements of the specifications, or to approve or accept any portion of the Work.
- e. The Testing Agency shall forward the laboratory report of each test to the Owner, Architect and the Contractor, within three (3) days after the test has been completed or the inspection has been performed.

1.03 WORK TO BE PERFORMED BY CONTRACTOR

- a. To facilitate testing services the Contractor shall:
 1. Secure and deliver to the Testing Agency, without charge, preliminary representative samples of the materials which the Contractor proposes to use and which are required to be tested.
 2. Furnish necessary labor to obtain and handle samples at the project, or at the source of the materials to be tested.
 3. Advise the Testing Agency sufficiently in advance of operations, and at least twenty four hours before operations, to allow for completion of prequalifying tests, and for the assignment of personnel.
 4. The Contractor shall provide free, safe and convenient access to the Work at all locations of the work including the Site, Ready-Mix Concrete facilities and other applicable locations to allow thorough meaningful inspections and obtaining of physical samples for testing of the Work or components to allow reasonable access for inspection.

Simmons,1990-07-31

To spite a national trend toward renovation restoration and remodeling construction products producers and their associations are not universally eager to publish recommendations for repairing or extending existing materials There are two major reasons First there are several possible applications of most building materials and there is an even larger number of different problems that can occur after products are installed in a building Thus it is difficult to produce recommendations that cover every eventuality Second it is not always in a building construction product producer s best interest to publish data that will help building owners repair their product Producers whose income derives from selling new products do not necessarily applaud when their associations spend their money telling architects and building owners how to avoid buying

their products Finally in the Building Renovation and Restoration Series we have a reference that recognizes that problems frequently occur with materials used in building projects In this book and in the other books in this series xiii xlv Saries Foreword Simmons goes beyond the promotional hyperbole found in most product literature and explains how to identify common problems He then offers informed inside recommendations on how to deal with each of the problems Each chapter covers certain materials or family of materials in a way that can be understood by building owners and managers as well as construction and design professionals *Publishers Directory* ,1994 *The Application of Stress-wave Theory to Piles* Jaime Alberto dos Santos,2008 This volume contains 101 papers presented at the 8th International Conference on the Application of Stress Wave Theory to Piles held in Lisbon Portugal in 2008 It is divided in 14 chapters according to the conference themes Wave mechanics applied to pile engineering Relationship between static resistance to driving and long term static soil resistance Case histories involving measurement and analysis of stress waves Dynamic monitoring of driven piles Dynamic soil pile interaction models numerical and physical modeling High strain dynamic test Low strain dynamic test Rapid load test Monitoring and analysis of vibratory driven piles Correlation of dynamic and static load tests Quality assurance of deep foundations using dynamic methods Incorporation of dynamic testing into design codes and testing standards Ground vibrations induced by pile motions Dynamic measurements in ground field testing This conference aims to contribute to a better and more efficient professional interaction between specialized contractors designers and academicians By joining the contribution of all of them it was possible to elucidate the today s state of the art in science technology and practice in the application of stress wave theory to piles BOOK JACKET *Technical Manual* United States War Department,1981 *Technical Manual* United States Department of the Army,1975 *Realty and Building* ,1957
