Cutaneous Haptic Feedback in Robotic Teleoperation Claudio Pacchierotti, 2015-11-06 This work addresses the challenge of providing effective cutaneous haptic feedback in robotic teleoperation with the objective of achieving the highest degree of transparency whilst guaranteeing the stability of the considered systems On the one hand it evaluates teleoperation systems that provide only cutaneous cues to the operator thus guaranteeing the highest degree of safety This cutaneous only approach shows intermediate performance between no force feedback and full haptic feedback provided by a grounded haptic interface and it is best suitable for those scenarios where the safety of the system is paramount e g robotic surgery On the other hand in order to achieve a higher level of performance this work also investigates novel robotic teleoperation systems with force reflection able to provide mixed cutaneous and kinesthetic cues to the operator Cutaneous cues can compensate for the temporary reduction of kinesthetic feedback necessary to satisfy certain stability conditions This state of the art volume is oriented toward researchers educators and students who are interested in force feedback techniques for robotic teleoperation cutaneous device design cutaneous rendering methods and perception studies as well as readers from different disciplines who are interested in applying cutaneous haptic technologies and methods to their field of interest

The Handbook of Multimodal-Multisensor Interfaces, Volume 3 Sharon Oviatt, Björn Schuller, Philip Cohen, Daniel Sonntag, Gerasimos Potamianos, Antonio Krüger, 2019-06-25 The Handbook of Multimodal Multisensor Interfaces provides the first authoritative resource on what has become the dominant paradigm for new computer interfaces user input involving new media speech multi touch hand and body gestures facial expressions writing embedded in multimodal multisensor interfaces This three volume handbook is written by international experts and pioneers in the field It provides a textbook reference and technology roadmap for professionals working in this and related areas This third volume focuses on state of the art multimodal language and dialogue processing including semantic integration of modalities The development of increasingly expressive embodied agents and robots has become an active test bed for coordinating multimodal dialogue input and output including processing

of language and nonverbal communication In addition major application areas are featured for commercializing multimodal multisensor systems including automotive robotic manufacturing machine translation banking communications and others These systems rely heavily on software tools data resources and international standards to facilitate their development For insights into the future emerging multimodal multisensor technology trends are highlighted in medicine robotics interaction with smart spaces and similar areas Finally this volume discusses the societal impact of more widespread adoption of these systems such as privacy risks and how to mitigate them The handbook chapters provide a number of walk through examples of system design and processing information on practical resources for developing and evaluating new systems and terminology and tutorial support for mastering this emerging field In the final section of this volume experts exchange views on a timely and controversial challenge topic and how they believe multimodal multisensor interfaces need to be equipped to most effectively advance human performance during the next decade

Human-Robot Body Experience

Philipp Beckerle, 2021-06-01 This monograph presents innovative research regarding the body experience of human individuals who are using assistive robotic devices such as wearable robots or teleoperation systems The focus is set on human in the loop experiments that help to empirically evaluate how users experience devices Moreover these experiments allow for further examination of the underlying mechanisms of body experience through extending existing psychological paradigms e g by disentangling tactile feedback from contacts Besides reporting and discussing psychological examinations the influence of various aspects of engineering design is investigated e g different implementations of haptic interfaces or robot control As haptics are of paramount importance in this tight type of human robot interaction it is explored with respect to modality as well as temporal and spatial effects The first part of the book motivates the research topic and gives an in depth analysis of the experimental requirements The second and third part present experimental designs and studies of human robot body experience regarding the upper and lower limbs as well as cognitive models to predict them The fourth part discusses a multitude of design considerations and provides directions to guide future research on bidirectional human machine interfaces and non functional haptic feedback

***Robotics Goes MOOC* Bruno Siciliano, 2025-04-30** With the massive and pervasive diffusion of robotics technology in our society we are heading towards a new type of AI which we call Physical AI at the intersection of Robotics with AI that is the science of robots and intelligent machines performing a physical action to help humans in their jobs of daily lives Physical assistance to disabled or elderly people reduction of risks and fatigue at work improvement of production processes of material goods and their sustainability safety efficiency and reduction of environmental impact in transportation of people and goods progress of diagnostic and surgical techniques are all examples of scenarios where the new InterAction Technology IAT is indispensable The interaction between robots and humans must be managed in a safe and reliable manner The robot becomes an ideal assistant like the tool used by a surgeon a craftsman a skilled worker The new generation of robots will co exist the cobots with humans not only in the workplace but gradually in

homes and communities providing support in services entertainment education health manufacturing and care As widely discussed above interaction plays a crucial role for the development of modern robotic systems Grasping manipulation and cooperative manipulators are covered in the first part of the third book of the Robotics Goes MOOC project respectively in Chapter 1 by Prattichizzo et al Chapter 2 by Kao et al and Chapter 3 by Caccavale Specific interaction issues along with the development of digital and physical interfaces are dealt with in Chapter 4 by Marchal et al and in Chapter 5 by Croft et al respectively Interaction between robot and human also means that a robot can be worn by a human as presented in Chapter 6 by Vitiello et al A different type of interaction at a cognitive and planning level is the focus of Chapter 7 by Lima devoted to multi robot systems and Chapter 8 by Song et al on networked cloud and fog robotics respectively Aircrew Training and Assessment Jr., Harold F.
